HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Babu Madabhushi, PhD

Years of experience
31 total | 25 with AECOM

Babu has 31 years of experience in conducting and managing environmental engineering projects. His technical expertise is in the areas of conducting contamination assessment, evaluation, water/wastewater treatment, groundwater treatment, remedial system operation and maintenance.

Babu is extremely knowledgeable of FDOT District Four, Florida's Turnpike Enterprise, DERM, FDEP and local regulations and standards. His expertise also encompasses sediment characterization, dredge design, RCRA Facility Investigation, contamination assessment, impact assessment, remedial investigation and feasibility studies, soil and groundwater remediation, in-situ bioremediation, and operation and maintenance of remedial systems.

Professional experience

Contamination Assessment and Remediation Services - BEE68, FDOT District Four (2022 – Present). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Assessment and Remediation Services - BE678, FDOT District Four (2020 – 2022). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Evaluation and Screening -PD&E Studies, FDOT District Six, Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, Miami Gardens to County Line), St. Lucie (SR-80), Martin, and Monroe (US-1) Counties, FL (2003 – 2021). Developed CSER for more than 30 project locations and Re-Evaluation Reports for several FDOT projects in Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, I-95), St. Lucie (SR-80), Martin, and Monroe (US-1) counties.

SR-826/Palmetto Expressway from north of NW 25th St to North of NW 104th St CSER, FDOT District Six, Miami-Dade County, FL (2022 – 2024). Contamination lead for the FDOT PLEMO with environmental assessment support services for the SR-826/Palmetto Expressway CSER. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential.

SR-826/Palmetto Expressway from South of NW 25th St to North of NW 154th St SEIR, FDOT District Six, Miami-Dade County, FL (2020 – 2021). Contamination Lead to provide the FDOT PLEMO with environmental assessment support services for the SR 826 / Palmetto Expressway SEIR. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential**.**

I-95 from South of NW 10th St to North of Hillsboro Boulevard, FDOT District Four, Broward County, FL (2017 – 2021). Contamination Lead for environmental tasks associated with the performance of a PD&E Study. Tasks include Contamination Lead to provide the FDOT PLEMO with environmental assessment support services. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential**.**

Education

PhD, Hazardous Waste Management, West Virginia University, 1997
MS, Wastewater Treatment, Indian Institute of Technology, 1993
BS, Civil Engineering, Kakatiya University, 1988

Expertise

CAR Project Manager
Contamination Assessment
Remedial Design
Remedial Action Implementation
Water/Wastewater Treatment
Groundwater Treatment
Remedial System Operation and Maintenance
Sediment Characterization

Training

40-hr OSHA HAZWOPER
8-hr OSHA HAZWOPER Annual Refresher

Registrations/Certifications

AECOM Certified Project Manager
AECOM Lead Verifier: In Situ Bioremediation

SR-826/Palmetto Expressway from US-1 (SR-5) to SR-836 / Dolphin Expressway, FDOT District Six, Miami-Dade County, FL (2018 – Present). Contamination lead for environmental tasks associated with the performance of an approximate 7-mile PD&E Study**.** Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

I-75 from Miami-Dade County Line to SR-826 (Palmetto Expressway) PD&E Study, FDOT District Six, Miami-Dade County, FL (2007 – Present). Contamination lead for the performance of a PD&E Study. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

Wagner Creek/Seybold Canal Contaminated Sediment Dredging and Disposal (2017 – Present). Managed this critical project in a heavily commercialized area near Jackson Hospital. This included sediment dredge design, permitting, contaminated sediment characterization/handling, sediment stabilization, turbidity control and disposal at out of state landfill. Won multiple awards (from FDEP and other entities) for successfully completing this under budget and within schedule without harming the manatees.

Former Eaker Air Force Base Remediation, U.S. Air Force, Blytheville, AR (2011 – 2021). Project manager for this performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Eaker AFB. The sites are contaminated with petroleum compounds, light non-aqueous phase liquid, chlorinated solvents, and arsenic. Services include remedial investigation, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Miami Dade DERM-14/E20 Contracts, Miami-Dade Aviation Department, Miami International Airport, Opa Locka Airport, Public Housing, Northwest Cargo Area, Miami, FL (2002 – 2021). Managed several projects that included delineation of petroleum, chlorinated solvent, and metals contamination at these properties. Installed several deep nested wells to delineate contamination in various zones of the aquifer. Multiple wells were installed in the vicinity of the runways, in the public right of way, and in the vicinity of residential areas. Currently overseeing the long-term groundwater monitoring activities.

Former Homestead Air Force Base Remediation, US Air Force, Homestead, FL (2011 – 2021). Deputy project manager for a performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Homestead AFB. The sites are contaminated with petroleum compounds, chlorinated solvents, and arsenic. Services include remedial investigation, preparation of Explanation of Significant Differences (ESD) to Record of Decision (ROD) document, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, storage tank removal, remedial design modifications, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Contamination Evaluation Studies, FGT, Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe Counties, FL, (2006 – Present). Contamination Specialist, responsible for developing contamination evaluation reports and Contingency Plans for numerous project locations in Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe counties for projects associated with hydrotesting, pipeline maintenance/repairs and pipeline abandonment work.

Blue Lagoon Post Office Site Assessment, Remediation, and Methane Collection System, US Postal Service, Miami, FL (2003 – Present). Project Manager/Senior Environmental engineer for contamination assessment at a facility constructed over a filled-in canal where lead was found in the soil above state cleanup levels. Work included soil and groundwater remediation activities and methane gas collection system design and monitoring. Currently, AECOM is performing natural attenuation monitoring and methane gas monitoring.

Remediation Engineering, Federal Aviation Administration (FAA), William J. Hughes Technical Center, Atlantic City, NJ (2005 – 2012). Remediation engineering task leader for operation and maintenance of treatment systems for approximately 5,000-acre CERCLA Superfund site at Areas B, D, 20A, 29, and Area 41. Assisted with operation and maintenance of the existing Central Treatment Plant (Pump and Treat System) to treat petroleum contaminated water. Provided innovative remediation enhancements, such as in-situ aerobic bioremediation of petroleum compounds and reductive dechlorination of chlorinated solvents, contaminated soil removal, vapor extraction, groundwater and soil investigations, GIS mapping and support, groundwater modeling, and routine regulatory interaction.

Executive Summary

South Florida Water Management (SFWMD) authorized AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (Phase I ESA) for the G56 Gated Spillway Facility (subject property). A portion of the site is identified by Broward County Parcel Identification Number (PIN) 4742-33-01-0080 in Deerfield Beach, Broward County, Florida (subject property). This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21). Exceptions to, or deletions from, this practice are described in this report.

The site visit occurred on June 11, 2025. The subject property consists of approximately 17.3-acres of land and canal that includes a gated spillway structure, G56, situated within the Hillsboro Canal and a single-story control building that houses electrical equipment used to operate the water control structure. The gated spillway is not manned, and the operations are automatically controlled. During site reconnaissance, one (1) underground storage tank (UST) containing propane of an unknown capacity was observed adjacent and east of the control building on the southcentral portion of the subject property. In addition, a rain gauge that automatically records precipitation was observed on the south side of the Hillsboro Canal within a small, fenced area. No visual evidence of potable water wells, monitoring wells, clarifiers, dry wells, septic tanks, or leach fields was observed on the subject property during the site visit.

The subject property is located in a residential area within the city of Deerfield Beach. Military Trail, extending north/south, cuts through the eastern portion of the subject property. The subject property is bordered to the north by multiple residential developments and the E-3 Canal. The subject property is bordered to the east by the Hillsboro Canal. The subject property is bordered to the south by Deer Creek Golf Course and a residential development. The subject property is bordered to the west by the Hillsboro Canal. Gasoline service stations and dry cleaners were not observed in the immediate vicinity (approximately 500 feet) of the subject property. Other off-site sources of concern were not identified in the immediate vicinity.

AECOM's historical review indicates that the subject property was developed with the Hillsboro Canal extending east to west through the center of the subject property. At the center of the site, situated within the canal, the former Deerfield Lock is depicted. Two (2) smaller canals extend north from the Hillsboro Canal, one on each side of the lock. The eastern canal is the present-day E-3 Canal. Two (2) additional small canals extend south from the west side of the lock from at least 1940. By at least 1947, a small building is depicted south of the lock and an unimproved dirt road from the building extending east, parallel to the Hillsboro Canal is depicted. By at least 1952, one of the small canals on the southern portion of the subject property was backfilled. By at least 1958, a small area of disturbed land is depicted east of the lock on the south of the Hillsboro Canal. By at least 1968, the remaining canal that had extended south was backfilled. By at least 1973, residential development is depicted on the southeast portion of the subject property. A golf course, present day Deer Creek Golf Course, is depicted on the southwest portion of the subject property. By at least 1976, the canal west of Deerfield Lock and extended north has been backfilled. By at least 1981, the structure east of the lock is no longer depicted and additional residential development is depicted on the southeast portion of the subject property. By at least 1986, boat docks are depicted in the eastern portion of the Hillsboro Canal and canal bank stabilization improvements are depicted at the opening of thepresent-day E-3 Canal. An unimproved road is depicted parallel to the Hillsboro Canal on the southeast portion of the subject property. By at least 1991, the construction of the present-day G56 gated spillway structure west of the lock is depicted. By at least 1995, the construction of the G56 gated spillway has been completed. Additionally, Military Trail has been constructed and passes over the Hillsboro Canal, east of the spillway. The subject property has generally remained in its current configuration (as observed during AECOM's site visit) since at least 1995.

The southwestern portion of the subject property has been developed as a golf course since the early 1970's. Golf course maintenance activities have historically included application of herbicides and pesticides to turf, including those containing arsenic, organo-chlorine pesticides (OCPs) and/or per- and polyfluoroalkyl substances (PFAS). The application of agrochemicals is allowed by the Federal Insecticide Fungicide, and Rodenticide Act (FIFRA), providing

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

they are applied in accordance with manufacturer specifications. As a result, the application of agrochemicals at the golf course is not considered a recognized environmental condition (REC). However, the Client should consider the golf course and associated areas, with respect to potential soil management activities related to the proposed redevelopment.

The subject property was not identified on the environmental database search report obtained for this project.

A number of surrounding sites were identified in the environmental database search report. However, the majority of these sites were listed on non-contamination-related databases. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present a REC to the subject property, based on their distance (generally greater than 500 feet), regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the subject property (i.e., down-gradient or cross-gradient).

Based on the above-described activities, no RECs, controlled RECs (CRECs), historical RECs (HRECs), significant data gaps, or de minimis conditions (DMCs) were identified in connection with the subject property.

A Tier 1 vapor encroachment screening (VES) following ASTM International, Designation: E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated May 2022 (ASTM E2600-22) was completed and no vapor encroachment conditions (VECs) were identified.

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (Phase I ESA) was performed pursuant to AECOM Technical Services, Inc. (AECOM's) written proposal, dated October 30, 2024 and Contract No. 4600004507-Work Order No. 14, for the G56 Gated Spillway, a portion of which is identified by Broward County Parcel Identification Numbers (PIN) 4742-33-01-0080, Deerfield Beach, Broward County, Florida (herein referred to as the "subject property"). This assessment was performed in advance of the potential spillway improvements at the subject property.

The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property. Per ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), de minimis conditions (DMCs) and significant data gaps as follows:

- A REC is defined by the ASTM standard as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.
- A HREC is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority and meeting unrestricted use criteria established by a regulatory authority or authorities without subjecting the subject property to any required controls.
- A CREC is defined as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (activity and use limitations or other property use limitations).
- DMCs are conditions related to a release that generally do not present a threat to human health or the environment and generally would not be subject to enforcement action if brought to the attention of the appropriate governmental agencies.
- A significant data gap is a data gap that affects the ability of the environmental professional to identify a REC.

In addition, a Tier 1 vapor encroachment screening (VES) was completed as part of this assessment. This screening was conducted in general accordance with ASTM International, Designation: E2600-22, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions dated May 2022 (ASTM E2600-22). The objective of the VES was to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a site visit, interviews, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property. Non-Scope Services per ASTM E1527-21 including, but not limited to, asbestos, lead paint, radon, floodplains and wetlands were not included in the scope of work. On April 17, 2024, EPA signed the final rule 20 to designate perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) collectively identified as per- and polyfluoroalkyl substances (PFAS) as hazardous substances under section 102(a) of CERCLA. This designation allows EPA to use its CERCLA enforcement authorities, as appropriate and where relevant statutory elements are met, which could shift the cost burden of CERCLA response costs from the Superfund to Potentially Responsible Parties (PRPs). As such, PFAS, is now considered part of the ASTM standard scope and is included in this scope of work.

This project was performed in general accordance with ASTM E1527-21 and AECOM's proposal authorized on October 30, 2024. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in ASTM E1527-21, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a subject property, and this practice recognizes reasonable limits of time and cost. (Section 4.5.1 of ASTM E1527-21)
- Not Exhaustive - "All appropriate inquiries" does not mean an exhaustive assessment of a property. There is a point at which the cost of information or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-21)
- Comparison with Subsequent Inquiry – It should not be concluded or assumed that an investigation was not AAI merely because the inquiry did not identify RECs in connection with a subject property. ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-21)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-21 is employed. According to ASTM E2600-22, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. Screening is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with the property. (Section 4.5.1 of ASTM E2600-22)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-22)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-22)

This report was prepared pursuant to an agreement between South Florida Water Management District (SFWMD) (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Report Viability

According to ASTM E1527-21, an ESA "meeting or exceeding this practice is presumed to be viable when it is conducted within 180 days of acquisition of the subject property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The dates of the components presented in 4.6.2(i), (iii), (iv), and (v) for interviews, review of government records, visual inspections, and declaration by environmental professional, shall be identified in the report. Completion of searches for recorded environmental cleanup liens (4.6.2(ii)) is a user responsibility; however, if the user has engaged the environmental professional to conduct these searches, then that date shall also be identified in the report." The table below lists the dates of completion for pertinent components of this Phase I ESA.

Component	Date of Issuance/Completion
Interviews with Owners, Operators and Occupants	June 11, 2025
Environmental Database Report	May 20, 2025
Visual Inspection of the Subject Property and Adjoining Properties	June 11, 2025
Declaration by Environmental Professional	August 18, 2025
Issuance of Report	August 18, 2025

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Report Viability Expiration Date*	November 30, 2025

* The 180-day viability date is based on the earliest referenced component noted in the table above.

1.5 Data Gaps

Per ASTM E1527-21:

- A data gap is defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.
- A data gap is considered a significant data gap if other information and/or professional experience raises reasonable concerns involving the effects of that data gap on the ability of the environmental professional to render an opinion regarding whether conditions exist that are indicative of RECs or CRECs.

The following data gaps (including site-specific limitations) were encountered during the course of this assessment:

- Approximately 47% of the subject property is covered by water; therefore, not all areas were able to be observed/assessed. Based on the use of this portion of the subject property and a review of historical documents, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- During the site visit, AECOM did not access the roof of the subject property building. AECOM's evaluation of the subject property focused on areas where hazardous substances are handled. The site contact did not report any hazardous substances associated with the roof. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this Phase I ESA. The user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property. Based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.
- A data failure was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1940. At the time of the photograph, a portion of the subject property appeared to be developed with a canal (a developed use per ASTM E1527-21). Therefore, the ASTM E1527-21 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified agricultural land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to be significant so that it would impact the results of this assessment.
- It should be noted that not all standard historical sources, as defined per ASTM E1527-21, were reviewed as part of this assessment. In addition to recorded land title records, building department records were not reviewed. Based on information provided from the remaining standard historical sources, additional historical information obtained from building department records would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to be significant so that it would impact the results of this assessment.
- Per ASTM E1527-21, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

- Per the agreed scope-of-work and ASTM E1527-21, information related to certain site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-21; at this time, the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant data gap to this investigation, given the historical use of the subject property as a restaurant.
- AECOM submitted a Freedom of Information Act (FOIA) request to the Broward County Sheriff's Office (BCSO) Department of Fire Rescue and Emergency Services to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's FOIA request has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the BCSO Department of Fire Rescue and Emergency Services to our FOIA request will significantly alter the conclusions or recommendations of this report and is not considered a significant data gap; however, if information is received from this FOIA request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

2. Site Description

2.1 Site Location and Parcel Description

The subject property consists of approximately 17.3-acres of land and canal and a portion of it is identified by Broward County PIN 4742-33-01-0080. The subject property is located in Deerfield Beach, Broward County, Florida. The subject property is a rectangular shaped tract of land and canal that includes a gated spillway structure, G56, situated within the Hillsboro Canal, approximately ½-mile west of the Interstate 95. The subject property is accessed from an unnamed road along the southern property boundary, accessible from Military Trail. The approximate location of the subject property is illustrated on Figure 1 - Site Location Map.

2.2 Site Ownership

According to the Broward County Property Appraiser's records, the subject property is owned by SFWMD.

2.3 Site Visit

Ms. Kelsey Esteves with AECOM visited the subject property on June 11, 2025. The site visit included a visual inspection of the interior portions of the onsite building and water control structure, as well as the exterior portions of the subject property and the surrounding area. During the site visit, AECOM was accompanied by Mr. Josh Feltner, Leasing & Real Estate Support – Environmental Science Unit, of the SFWMD. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.5.

The site visit methodology consisted of walking over accessible areas of the subject property, including the building interiors and exteriors, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visit.

2.3.1 Site and Facility Description

The approximate 17.3-acre subject property encompasses an estimated 8.1 acres of the Hillsboro Canal, a gated spillway structure, G56, and a single-story control building that houses electronical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically, or telemetry controlled. The structure is a reinforced concrete gated spillway, with discharge controlled by three (3) cable operated, vertical lift gates.

During the site visit, one (1) underground storage tank (UST) containing propane of an unknown capacity was observed adjacent east of the onsite structure on the southcentral portion of the subject property. In addition, a rain gauge that automatically records precipitation was observed on the south side of the Hillsboro Canal within a small, fenced area. No visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields were identified on the subject property. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. In addition, no visual evidence of significant corrosion was identified on the floors or walls of the subject property building or on the exterior of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

2.3.2 Surrounding Properties

The subject property is located in a residential area within the city of Deerfield Beach. Military Trail, extending north/south, cuts through the eastern portion of the subject property. The subject property is bordered to the north by multiple residential developments and the E-3 Canal, which extends north from the Hillsboro Canal. The subject property is bordered to the east by the Hillsboro Canal. The subject property is bordered to the south by Deer Creek Golf Course and a residential development. The subject property is bordered to the west by the Hillsboro Canal.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

AECOM did not identify any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. In addition, no sensitive receptors (i.e., day care centers, schools, hospitals, water bodies) were identified as being located adjacent to the subject property. Based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of environmental concern were identified.

2.3.3 Petroleum Products and Hazardous Materials

No petroleum products or hazardous materials use or storage was observed at the subject property. Staining or visual evidence of a hazardous materials release was not observed at the time of the site visit.

2.3.4 Hazardous Waste

No evidence of hazardous waste generation was observed at the subject property, and the site contact reported no such activities. In addition, the subject property was not listed as a generator of hazardous waste in the site-specific database report.

2.3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the use of the site, PCBs are not expected to be present on-site.

No pad or pole-mounted transformers were observed on the subject property during the site visit. No other hydraulic equipment (transformers, trash compactors, lifts) was identified on the subject property.

2.3.6 Aboveground Storage Tanks

Aboveground storage tanks (ASTs) were not observed on the subject property during the site visit. In addition, no ASTs were listed on the subject property in the site-specific environmental database report reviewed by AECOM or otherwise identified during AECOM's review of historical aerial photographs.

2.3.7 Underground Storage Tanks

One (1) UST containing an unknown quantity of propane was observed adjacent east to the onsite control building on the southcentral portion of the subject property. Due to the nature of propane (gas at normal temperature and pressure), this propane storage is not considered a significant concern.

2.3.8 Solid Waste

No solid waste was observed at the subject property. Based on the lack activities onsite, no solid waste is expected to be generated at the subject property.

2.3.9 Water

Municipal water is not currently provided to the subject property. No potable water wells were observed at the subject property or reported by the site contact to be present onsite. According to the site contact, municipal water is available to the surrounding properties.

2.3.10 Wastewater

Due to the lack of activities onsite, no wastewater is currently generated on the subject property.

2.3.11 Stormwater

No stormwater drains were observed on the subject property at the time of AECOM's site reconnaissance. Stormwater from the subject property appears to drain via sheet flow to the Hillsboro Canal.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

2.3.12 Heating and Cooling

The onsite spillway structure and control building are not equipped with heating or cooling services.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

3. Environmental Setting

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of the West Dixie Bend, Florida quadrangle and the Boca Raton, Florida quadrangle indicate that the subject property elevation ranges from approximately 0 to 13 feet above mean sea level (amsl). Approximately 8.1 acres of the 17.3-acre site consist of the Hillsboro Canal. However, surface water runoff from the subject property is likely diverted to man-made drainage pathways which likely drains toward the canal at the center of the site.

3.2 Soil/Geology

Site-specific geologic information was not identified during the course of this assessment; however, according to state and regional geologic sources, the subject property lies within the Gold Coast – Florida Bay Physiographic District. This is the area of south and southeastward sluggish drainage from Lake Okeechobee. The rocks and sediment are Pleistocene aged and are largely limestones or limestone cap rocks. The site lies within the sub classification of the Southern Atlantic Coastal Strip Subdistrict. The subdistrict consists of a broad ridge underlain by sand and shelly sand that probably originated as a shoal. Very gentle slopes exist on the westward side. The eastern side is more complex having been subsequently modified by marine processes. Within the Southern Atlantic Coastal Strip are six (6) geologically distinct sections. The subject site lies within the Pompano-Fort Lauderdale Gap. This is an area with no detectable coastal ridge; the elevations are generally 10-12 feet amsl (UF, 1981).

Surface soils at the subject property are mapped as the Udorthents, Pomello find sand, and Immokalee-Urban land complex (USDA, 2015). Udorthents soils consists of unconsolidated or heterogeneous geologic material removed in the excavation of ditches, canals, lakes and ponds. It is commonly piled along banks and has slopes of 2 to 40 percent. The soil is moderately well drained. Weeds and native grasses have become established in some areas of Udorthents. Other areas have little or no vegetation. The soil material is erodible, especially where slopes are steep and where areas are bare or sparsely vegetated. This soil is unsuited to cultivated crops, citrus, or improved pasture. It is frequently used as a source of roadbuilding material and as a source of fill for new homesites, golf courses, and other purposes. Pomello fine sands are nearly level to gently sloping, deep, moderately well drained, sandy soil that has a layer well coated with organic matter at a depth of 30 to 50 inches. It is on low ridges east of the Everglades and slopes are 0 to 5 percent. The natural vegetation consists of pine, palmetto, live oak, and native grasses. The Immokalee-Urban land complex consists of Immokalee fine sand and Urban land. The areas of these components are so intermixed or so small that separation at the scale of mapping is impractical. Depth to the water table is dependent upon the established drainage in the area. About 20 to 45 percent of the complex is open land, such as lawns and vacant lots; and about 40 to 70 percent is Urban land, or areas covered by sidewalks, streets, patios, driveways, and buildings, where the natural soil cannot be observed. The open land consists of nearly level, poorly drained Immokalee soils that have been modified in most places by spreading sandy material on the surface of the soil to an average thickness of about 12 inches but ranging from about 6 to 20 inches. About 10 percent of the Immokalee soils have not been modified. The original soil below the fill material is Immokalee fine sand (USDA, 1984).

3.3 Groundwater/Hydrology

Site-specific hydrologic information was not identified during the course of this assessment. Based on topography and geologic conditions, uppermost groundwater likely occurs within 3 to 4 feet of the ground surface at the subject property (USGS, 1995). The uppermost groundwater flow direction likely follows local topography generally southeast and towards the Hillsboro Canal. It should be noted that the actual depth and flow direction of groundwater beneath the subject property cannot be determined without site-specific groundwater monitoring well data.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1940, 1947, 1952, 1958, 1968, 1973, 1976, 1981, 1986, 1991, 2007, 2010, 2015, and 2019, obtained from EDR;
- Google Earth aerial images dated 1995, 1999, 2002 through 2011, and 2014 through 2025;
- Topographic maps dated 1949, 1950, 1958, 1962, 1983, 2012, 2015, 2018, and 2021, obtained from EDR;
- City directories for the years 1992, 1993, 1995, 2000, 2005, 2010, 2014, 2017, and 2020, obtained from EDR;

Building Department records were not reviewed during the course of this assessment. According to Environmental Data Resources, Inc. (EDR), Sanborn® Fire Insurance Map coverage is not available for the subject property. Copies of the historical documents/reports are provided in Appendix B.

4.1 Subject Property

AECOM's review of historical data indicates that the subject property was developed with the Hillsboro Canal extending east to west through the center of the subject property. At the center of the site, situated within the canal, the former Deerfield Lock is depicted. Two (2) smaller canals extend north from the Hillsboro Canal, one on each side of the lock. The eastern canal is the present-day E-3 Canal. Two (2) additional small canals extend south from the west side of the lock from at least 1940. By at least 1947, a small building is depicted south of the lock and an unimproved dirt road from the building extending east, parallel to the Hillsboro Canal is depicted. By at least 1952, one of the small canals on the southern portion of the subject property has been backfilled. By at least 1958, a small area of disturbed land is depicted east of the lock on the south of the Hillsboro Canal. By at least 1968, the remaining canal that had extended south has been backfilled. By at least 1973, residential development is depicted on the southeast portion of the subject property. A golf course, present day Deer Creek Golf Course, is depicted on the southwest portion of the subject property. By at least 1976, the canal west of Deerfield Lock and extended north has been backfilled. By at least 1981, the structure east of the lock is no longer depicted and additional residential development is depicted on the southeast portion of the subject property. By at least 1986, boat docks are depicted in the eastern portion of the Hillsboro Canal and canal bank stabilization improvements are depicted at the opening of the on present-day E-3 Canal. An unimproved road is depicted parallel to the Hillsboro Canal on the southeast portion of the subject property. By at least 1991, the construction of the present-day G56 gated spillway structure west of the lock is depicted. By at least 1995, the construction of the G56 gated spillway has been completed. Additionally, Military Trail has been constructed and passes over the Hillsboro Canal, east of the spillway. The subject property has generally remained in its current configuration (as observed during AECOM's site visit) since at least 1995.

The southwestern portion of the subject property has been developed as a golf course since the early 1970's. Golf course maintenance activities have historically applied herbicides and pesticides to turf, including those containing arsenic, organo-chlorine pesticides (OCPs) and/or per- and polyfluoroalkyl substances (PFAS). The application of agrochemicals is allowed by the Federal Insecticide Fungicide, and Rodenticide Act (FIFRA), providing they are applied in accordance with manufacturer specifications. As a result, the application of agrochemicals at the golf course is not considered a recognized environmental condition (REC). However, the User should consider the golf course and associated areas, with respect to potential soil management activities related to the proposed redevelopment.

4.2 Adjoining Properties and Surrounding Area

The 1940 aerial photograph depicts the northern adjoining property to consist of a small L-shaped canal connecting to the present-day E-3 Canal. The E-3 Canal extends north from the Hillsboro Canal. The remaining portions of land are undisturbed with a narrow trail extending east to west. By at least 1952, agricultural row crops are depicted on the northwestern portion of the northern adjoining property and water mitigation ditches are depicted on the

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

northeastern portion of the northern adjoining property. By at least 1973, roadway construction of present-day Southwest 18th Street located on the northern portion of the northern adjoining property is depicted. Additionally, the construction of the northern portion of Military Trail is depicted east of the E-3 Canal. By at least 1976, the L-shaped canal has been backfilled and residential development is depicted west of the E-3 Canal. By at least 1986, residential development continues east and west of the E-3 Canal. By at least 1995, the construction of Military Trail has been completed, extending north and south. Since at least 1995, the northern adjoining property has remained in its current configuration (as observed during AECOM's site visit).

The Hillsboro Canal extends east from the subject property in the 1940 historical aerial photograph. Undisturbed land is depicted north and south of the canal on the properties adjacent east of subject property. By at least 1947, ditches for water mitigation are depicted north and south of the Hillsboro Canal. By at least 1958, a short canal extending south from the Hillsboro Canal is depicted. By at least 1968, an additional canal extending south for a short distance is depicted and road construction for residential development is depicted south of the Hillsboro Canal. By at least 1981, disturbed land is depicted north of the Hillsboro Canal. By at least 1986, residential development is depicted north of the Hillsboro Canal. Boat docks along the northern portion of the Hillsboro Canal are also depicted. By at least 1991, additional residential development on the land between the two southern canals is depicted. Additionally, canal bank stabilization improvements are depicted on the two southern canals. By at least 1999, residential development has been completed south of the Hillsboro Canal. Since at least 1999, the eastern adjoining properties have remained in their current configuration (as observed during AECOM's site visit).

The 1940 aerial photograph depicts the southern adjoining property to consist of a Y-shaped canal extending south from the Hillsboro Canal. A diagonal, unimproved road is also depicted across the southern adjoining property. By at least 1947, a narrow canal, starting from the Y-shaped canal, extending east, and connecting to the water mitigation ditches on the southeastern adjoining property is depicted. By at least 1952, a portion of land on the western portion of the southern adjoining property has been cleared. By at least 1958, portions of the Y-shaped canal and the narrow diagonal canal have been backfilled. By at least 1968, numerous unimproved roads and/or trails are depicted throughout the southern adjoining property. By at least 1973, portions of the present-day Deer Creek Golf Course are depicted on the southwestern portion of the southern adjoining property. Residential homes are depicted on the southeastern portion of the southern adjoining property. By at least 1981, the diagonal roadway is no longer depicted and the present-day residential neighborhood has been constructed. By at least 1995, the construction of Military Trial, on the eastern portion of the southern adjoining property is depicted, extending north and south. Since at least 1995, the southern adjoining property has remained in its current configuration (as observed during AECOM's site visit).

The Hillsboro Canal extends west from the subject property in the 1940 historical aerial photograph. Undisturbed land is depicted north and south of the canal on the properties adjacent west of subject property. By at least 1952, agricultural row crops are depicted on the northern portion of the property adjacent west of the subject property. By at least 1973, the present-day Deer Creek Golf Course are depicted on the south of the Hillsboro Canal and a small canal extending south from the Hillsboro Canal is depicted. By at least 1976, road construction for residential development is depicted north of the Hillsboro Canal. By at least 1981, residential development is depicted north and south of the Hillsboro Canal. Residential development continues to at least 1999. Since at least 1999, the western adjoining properties have remained in their current configuration (as observed during AECOM's site visit).

4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were not identified during this assessment, nor were they provided by the Client for review.

5. Database and Records Review

5.1 User Provided Information

Section 6 of ASTM E1527-21 states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-21; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Land Title and Judicial Records for Environmental Liens and Activity and Use Limitations

Information pertaining to chain-of-title, environmental liens or activity and use limitation was not provided to AECOM by the User (i.e., the client), nor was AECOM contracted to obtain information pertaining to chain-of-title, environmental liens or activity and use limitations. Environmental agency databases as provided by EDR show no indication of deed restrictions or activity and use limitations due to a release of hazardous materials.

5.3 Database Information

In accordance with the scope of work and ASTM E1527-21, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report. It should be noted that this information is reported as AECOM received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either AECOM or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. One (1) additional site was identified within the database report; however, EDR was not able to map them to specific locations due to insufficient/contradicting address information. This site was included in the database report as "orphan" sites. Based upon AECOM's review, there does not appear to be any significant concerns associated with the orphan site. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix C.

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

5.3.1 Subject Property

The subject property was not identified in the site-specific environmental database report.

5.3.2 Surrounding Sites

According to the environmental database report, several sites were identified within their respective ASTM E1527-21 and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

property, regulatory status (i.e., closed, no violations found), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Due to its proximity to the subject property, the following site is discussed in additional detail:

- Aldo Cleaners, 5970 Southwest 18th Street, Facility ID: ERIC_5188, is located approximately 1,521 feet northwest of the subject property. This site is listed on the Resource Conservation and Recovery Act (RCRA) – Very Small Quantity Generators (VSQG), Priority Cleaners, Facility Index System (FINDS), Enforcement & Compliance History Information (ECHO), Dry Cleaners, Responsible Party, Environmental Restoration Integrated Cleanup (ERIC) Waste Cleanup, and Florida Division of Waste Management Contamination (DWM CONTAM) databases. According to the available information reviewed, this facility began dry cleaning operations in 1986. The facility is currently an active dry cleaner and uses tetrachloroethene (PCE) as the primary dry-cleaning solvent in one of its two dry cleaning machines. A Site Screening Report Form was submitted on May 1, 1996. According to the report form, PCE was detected at a concentration of 8.6 micrograms per kilogram (µg/kg) in a soil sample collected from beneath the building slab. An Initial Site Assessment Report (ISAR) dated April 2025, stated 21 soil samples and nine (9) groundwater samples were collected from within and around the facility, as part of the initial assessment approved by FDEP. The samples were analyzed for volatile organic halocarbons (VOHs). VOHs were not detected above their respective cleanup target levels (CTLs) in any of the soil or groundwater samples collected. The ISAR concluded that there is no need for remedial action and recommended an additional groundwater sampling event to confirm VOHs are not present within the surficial aquifer. Since dry cleaning solvents were not present above the respective soil or groundwater CTLs, it is AECOM's opinion that this site is not a REC related to the subject property.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 VES as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-22. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

5.4.1 Subject Property

No on-site sources of vapor encroachment (e.g., UST, contaminated soil, groundwater plume, etc.) were identified during this assessment. Based on this information, a VEC due to an on-site source does not appear to exist.

5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that 1 CVOC/SVOC and no petroleum hydrocarbon impacted sites are located with the above-described radii of the subject property. However, the identified site, Aldo Cleaners, can be ruled out due to their regulatory status (i.e., regulatory closure has been issued), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Based on this information, it is AECOM's opinion that a VEC at the subject property due to an off-site source does not appear to exist.

5.5 Agency File Review

5.5.1 Local

AECOM submitted a request, under the Freedom of Information Act (FOIA), to the BCSO Department of Fire Rescue and Emergency Services to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's FOIA request has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the BCSO Department of Fire Rescue and Emergency Services to our FOIA request will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIA request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

5.5.2 County

AECOM reviewed the Broward County Property Appraiser's and ENVIROS online databases for records pertaining to the subject property's physical and parcel addresses. No records were identified for the subject property physical and parcel addresses.

5.5.3 State

AECOM submitted a Public Records Request to the FDEP on June 3, 2025, for information pertaining to the generation, transportation, storage, treatment and/or disposal of hazardous waste as well as any historical petroleum or chemical releases, leaking petroleum tanks, environmental assessment activities, and/or notices of violation that may have occurred on the subject property. No information was received during the time frame of this assessment. AECOM searched the FDEP Nexus Information Portal online database.

5.5.4 Federal

AECOM searched the U.S. EPA's Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potentially hazardous waste sites. The subject property was not listed on the Envirofacts or SEMS databases.

6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM E1527-21, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings of this Phase I ESA and the opinions of the environmental professional.

6.1 Recognized Environmental Conditions

Based on the above-described activities, no RECs were identified in connection with the subject property.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the subject property.

6.4 Vapor Encroachment Conditions

Based on the above-described activities, no VECs were identified in connection with the subject property.

6.5 De Minimis Conditions

Based on the above-described activities, no DMCs were identified in connection with the subject property.

6.6 Significant Data Gaps

ASTM E1527-21 requires the environmental professional document significant data gaps, as well as any exceptions to, or deletions from the ASTM Practice E1527-21. A significant data gap is a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Based on the above-described activities, no significant data gaps were identified during this Phase I ESA.

7. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the G56 Gated Spillway Facility, a portion of the site is identified by Broward County PIN 4742-33-01-0080 in Deerfield Beach, Broward County, Florida, the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property. However, the southwestern portion of the subject property has been developed as a golf course since the early 1970's. Golf course maintenance activities have historically applied herbicides and pesticides to turf, including those containing arsenic, organo-chlorine pesticides (OCPs) and/or per- and polyfluoroalkyl substances (PFAS). The application of agrochemicals is allowed by the Federal Insecticide Fungicide, and Rodenticide Act (FIFRA), providing they are applied in accordance with manufacturer specifications. As a result, the application of agrochemicals at the golf course is not considered a REC. However, the Client should consider the golf course and associated areas, with respect to potential soil management activities related to the proposed redevelopment.

8. Environmental Professional Statement

Mr. Madabhushi was the Environmental Professional (EP) for this project. Mr. Madabhushi's EP statement is below and her resume is provided in Appendix D:

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Appendix B Supporting Documentation

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

STRUCTURE G-56

This structure is a reinforced concrete gated spillway, with discharge controlled by three cable operated, vertical lift gates. Operation of the gates is automatically or telemetry controlled. The new structure was completed in 1991 to replace the old Deerfield Lock Structure. The structure is located near the mouth of the Hillsboro Canal, about two miles west of Deerfield Beach. The contract number of the new structure is C90-1017. The drawing number is G-56-002.

PURPOSE

This structure maintains optimum water control stages in the Hillsboro Canal. It passes flood flows while limiting the upstream stage, downstream stage and channel velocity.

OPERATION

If the structure is operated automatically, the gates will operate to maintain the optimum upstream water surface elevation as follows:

When the headwater elevation rises to 8.0 feet, the gates will open at six inches per minute.

When the headwater elevation rises or falls to 7.5 feet, the gate will become stationary.

When the headwater elevation falls to 7.0 feet, the gates will close at six inches per minute.

Under normal conditions, the structure maintains headwater elevation between 7.0 to 8.0 feet. During flood event or making regulatory releases from S-39, structure G-56 may maintain at a lower than normal headwater elevation.

During the dry period, the headwater elevation at the structure may be raised to 8.7 feet, top elevation of the full closed gate, for water conservation purposes.

When the headwater elevation rises to 8.7 feet, the gates will open at six inches per minute.

When the headwater elevation rises or falls to 8.5 feet, the gate will become stationary.

When the headwater elevation falls to 8.3 feet, the gates will close at six inches per minute

FLOOD DISCHARGE CHARACTERISTICS

	Design	Structure Protection Design
Discharge Rate	3760 cfs	5000 cfs
Headwater Elevation	7.6 feet	7.2 feet
Tailwater Elevation	6.9 feet	6.0 feet

The design discharge rate is based on the existing capacity of the old Deerfield Lock structure. The design flood frequency is unknown.

DESCRIPTION OF STRUCTURE

Type Fixed crest, reinforced concrete gated spillway

Weir Crest

- Net Length 60 feet
- Elevation -3.5 feet

Service Bridge Elevation 14 feet

Water Level which will by-pass structure 12 feet

Gates

- Number 3
- Size 12.2 feet high by 20 feet wide
- Type Vertical slide gate
- Top elevation of gate, full closed 8.7 feet
- Bottom elevation gate, full open 9.8 feet
- Control on-site, automatic with headwater elevation control or telemetry remote control

Lifting Mechanism

Normal Power Source commercial electricity

Emergency Power Source on-site LP gas electric generator

Type of Hoist Hydraulic cable lift hoist

ACCESS: Structure is located just west of Military Trail

HYDRAULIC AND HYDROLOGY MEASUREMENTS

Water Level Staff gauge and remote digital recorder at upstream and downstream of the structure

Gate Position Remote digital recorder at all gates

Rain Gauge Remote digital recorder

DEWATERING FACILITIES

Dewatering beam and aluminum needles are located at the structure maintenance facility in West Palm Beach.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Broward County, Florida, East Part
Survey Area Data: Version 20, Aug 20, 2024

Soil Survey Area: Palm Beach County Area, Florida
Survey Area Data: Version 21, Aug 22, 2024

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 10, 2022—May 1, 2023

MAP LEGEND

MAP INFORMATION

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
17	Immokalee-Urban land complex	1.0	6.1%
28	Pomello fine sand, 0 to 2 percent slopes	1.1	6.7%
38	Udorthents, shaped	2.2	12.9%
99	Water	7.9	46.3%
Subtotals for Soil Survey Area		**12.2**	**72.0%**
Totals for Area of Interest		**16.9**	**100.0%**

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Site Name:	Client Name:
G-56 Spillway	AECOM
2458 Emerlad Way	7650 Corporate Center Drive
Boca Raton, FL 33433	Miami, FL 33126
EDR Inquiry # 7994443.4	Contact: Kelsey Esteves

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:		*Coordinates:*	
P.O.#	60741079	**Latitude:**	26.327889 26° 19' 40" North
Project:	Broward Spillway Assessment	**Longitude:**	-80.130637 -80° 7' 50" West
		UTM Zone:	Zone 17 North
		UTM X Meters:	586762.91
		UTM Y Meters:	2912288.25
		Elevation:	13.00' above sea level

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal leaking storage tanks

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's PCTO1--Petroleum Contamination Detail Report.

A review of the LUST list, as provided by EDR, and dated 01/21/2025 has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Fl Sites: This summary status report is a compilation and revision of other existing lists. It was developed from a number of lists including the Eckhardt list, the Moffit list, the EPA Hazardous Waste Sites list, EPA's Emergency and Remedial Response Information System list (RCRA Section 3012), and existing department lists such as the Obsolete Uncontrolled Hazardous Waste Sites list. The purpose of this list is to track the progress of activities within and outside the department as they relate to the listed sites. It is not a list of uncontrolled sites or sources causing environmental contamination. The Sites List comes from the Department of Environmental Protection.

A review of the Fl Sites list, as provided by EDR, and dated 12/31/1989 has revealed that there is 1 Fl Sites site within approximately 1 mile of the target property.

Other Ascertainable Records

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

Lists of state and tribal brownfield sites

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/02/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

Version Date:	2021
East Map:	17176285 BOCA RATON, FL
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

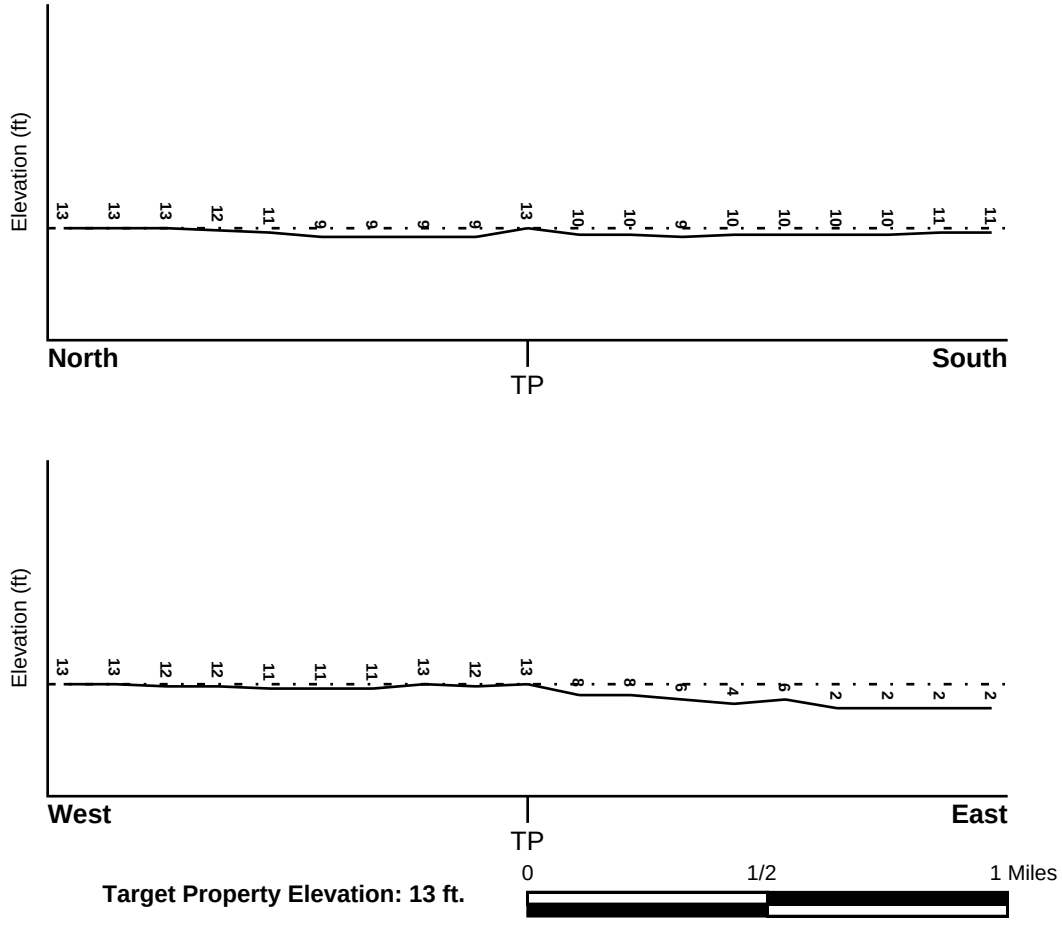
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
12011C0159H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
12011C0178H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WEST DIXIE BEND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
42	1/2 - 1 Mile SSE	NNE
Q72	1/2 - 1 Mile SE	SE
1G	1/2 - 1 Mile SE	SE
3G	1/2 - 1 Mile SSE	NNE

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:	Water
Soil Surface Texture:	
Hydrologic Group:	Not reported
Soil Drainage Class:	
Hydric Status: Not hydric	
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name:	Pomello
Soil Surface Texture:	fine sand
Hydrologic Group:	Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class:	Moderately well drained
Hydric Status: Not hydric	
Corrosion Potential - Uncoated Steel:	Low
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 84 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	42 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5
2	42 inches	64 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5
3	64 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5

Soil Map ID: 3

Soil Component Name: Udorthents

Soil Surface Texture: gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	57 inches	gravelly sand	Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: Udorthents, shaped

Soil Surface Texture: cobbly sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	cobbly sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	29 inches	50 inches	sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	50 inches	50 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 5

Soil Component Name: Pomello

Soil Surface Texture: fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	42 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5
2	42 inches	64 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	64 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5

Soil Map ID: 6

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
2	5 inches	35 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
3	35 inches	53 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
4	53 inches	72 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6

Soil Map ID: 7

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
2	5 inches	35 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
3	35 inches	53 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
4	53 inches	72 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6

Soil Map ID: 8

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

2	5 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.8 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: Department of Environmental Protection
Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Babu Madabhushi, PhD

Years of experience
31 total | 25 with AECOM

Babu has 31 years of experience in conducting and managing environmental engineering projects. His technical expertise is in the areas of conducting contamination assessment, evaluation, water/wastewater treatment, groundwater treatment, remedial system operation and maintenance.

Babu is extremely knowledgeable of FDOT District Four, Florida's Turnpike Enterprise, DERM, FDEP and local regulations and standards. His expertise also encompasses sediment characterization, dredge design, RCRA Facility Investigation, contamination assessment, impact assessment, remedial investigation and feasibility studies, soil and groundwater remediation, in-situ bioremediation, and operation and maintenance of remedial systems.

Professional experience

Contamination Assessment and Remediation Services - BEE68, FDOT District Four (2022 – Present). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Assessment and Remediation Services - BE678, FDOT District Four (2020 – 2022). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Evaluation and Screening -PD&E Studies, FDOT District Six, Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, Miami Gardens to County Line), St. Lucie (SR-80), Martin, and Monroe (US-1) Counties, FL (2003 – 2021). Developed CSER for more than 30 project locations and Re-Evaluation Reports for several FDOT projects in Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, I-95), St. Lucie (SR-80), Martin, and Monroe (US-1) counties.

SR-826/Palmetto Expressway from north of NW 25th St to North of NW 104th St CSER, FDOT District Six, Miami-Dade County, FL (2022 – 2024). Contamination lead for the FDOT PLEMO with environmental assessment support services for the SR-826/Palmetto Expressway CSER. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential.

SR-826/Palmetto Expressway from South of NW 25th St to North of NW 154th St SEIR, FDOT District Six, Miami-Dade County, FL (2020 – 2021). Contamination Lead to provide the FDOT PLEMO with environmental assessment support services for the SR 826 / Palmetto Expressway SEIR. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential**.**

I-95 from South of NW 10th St to North of Hillsboro Boulevard, FDOT District Four, Broward County, FL (2017 – 2021). Contamination Lead for environmental tasks associated with the performance of a PD&E Study. Tasks include Contamination Lead to provide the FDOT PLEMO with environmental assessment support services. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential**.**

Education

PhD, Hazardous Waste Management, West Virginia University, 1997
MS, Wastewater Treatment, Indian Institute of Technology, 1993
BS, Civil Engineering, Kakatiya University, 1988

Expertise

CAR Project Manager
Contamination Assessment
Remedial Design
Remedial Action Implementation
Water/Wastewater Treatment
Groundwater Treatment
Remedial System Operation and Maintenance
Sediment Characterization

Training

40-hr OSHA HAZWOPER
8-hr OSHA HAZWOPER Annual Refresher

Registrations/Certifications

AECOM Certified Project Manager
AECOM Lead Verifier: In Situ Bioremediation

SR-826/Palmetto Expressway from US-1 (SR-5) to SR-836 / Dolphin Expressway, FDOT District Six, Miami-Dade County, FL (2018 – Present). Contamination lead for environmental tasks associated with the performance of an approximate 7-mile PD&E Study**.** Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

I-75 from Miami-Dade County Line to SR-826 (Palmetto Expressway) PD&E Study, FDOT District Six, Miami-Dade County, FL (2007 – Present). Contamination lead for the performance of a PD&E Study. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

Wagner Creek/Seybold Canal Contaminated Sediment Dredging and Disposal (2017 – Present). Managed this critical project in a heavily commercialized area near Jackson Hospital. This included sediment dredge design, permitting, contaminated sediment characterization/handling, sediment stabilization, turbidity control and disposal at out of state landfill. Won multiple awards (from FDEP and other entities) for successfully completing this under budget and within schedule without harming the manatees.

Former Eaker Air Force Base Remediation, U.S. Air Force, Blytheville, AR (2011 – 2021). Project manager for this performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Eaker AFB. The sites are contaminated with petroleum compounds, light non-aqueous phase liquid, chlorinated solvents, and arsenic. Services include remedial investigation, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Miami Dade DERM-14/E20 Contracts, Miami-Dade Aviation Department, Miami International Airport, Opa Locka Airport, Public Housing, Northwest Cargo Area, Miami, FL (2002 – 2021). Managed several projects that included delineation of petroleum, chlorinated solvent, and metals contamination at these properties. Installed several deep nested wells to delineate contamination in various zones of the aquifer. Multiple wells were installed in the vicinity of the runways, in the public right of way, and in the vicinity of residential areas. Currently overseeing the long-term groundwater monitoring activities.

Former Homestead Air Force Base Remediation, US Air Force, Homestead, FL (2011 – 2021). Deputy project manager for a performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Homestead AFB. The sites are contaminated with petroleum compounds, chlorinated solvents, and arsenic. Services include remedial investigation, preparation of Explanation of Significant Differences (ESD) to Record of Decision (ROD) document, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, storage tank removal, remedial design modifications, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Contamination Evaluation Studies, FGT, Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe Counties, FL, (2006 – Present). Contamination Specialist, responsible for developing contamination evaluation reports and Contingency Plans for numerous project locations in Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe counties for projects associated with hydrotesting, pipeline maintenance/repairs and pipeline abandonment work.

Blue Lagoon Post Office Site Assessment, Remediation, and Methane Collection System, US Postal Service, Miami, FL (2003 – Present). Project Manager/Senior Environmental engineer for contamination assessment at a facility constructed over a filled-in canal where lead was found in the soil above state cleanup levels. Work included soil and groundwater remediation activities and methane gas collection system design and monitoring. Currently, AECOM is performing natural attenuation monitoring and methane gas monitoring.

Remediation Engineering, Federal Aviation Administration (FAA), William J. Hughes Technical Center, Atlantic City, NJ (2005 – 2012). Remediation engineering task leader for operation and maintenance of treatment systems for approximately 5,000-acre CERCLA Superfund site at Areas B, D, 20A, 29, and Area 41. Assisted with operation and maintenance of the existing Central Treatment Plant (Pump and Treat System) to treat petroleum contaminated water. Provided innovative remediation enhancements, such as in-situ aerobic bioremediation of petroleum compounds and reductive dechlorination of chlorinated solvents, contaminated soil removal, vapor extraction, groundwater and soil investigations, GIS mapping and support, groundwater modeling, and routine regulatory interaction.

Executive Summary

South Florida Water Management District (SFWMD) authorized with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the G57 Gated Spillway Facility identified by Broward County Parcel Identification Numbers (PINs) 4942-01-00-0990 (portion) and 4942-02-00-1040 (portion), Pompano Beach, Broward County, Florida (subject property). This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21). Exceptions to, or deletions from, this practice are described in this report.

The site visits occurred on January 10, 2025 (exterior portions and surrounding area) and January 22, 2025 (interior of onsite buildings). The subject property consists of approximately 4.5-acres of land and canal situated on portions of two separate parcels identified by Broward County PIN's 4942-01-00-0990 and 4942-02-00-1040, and located in Pompano Beach, Broward County, Florida. The subject property is a narrow, elongated rectangular-shaped tract of land and canal, that includes a gated spillway structure, G57, situated within the Pompano Canal, and two (2) control buildings that house electrical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically controlled. The subject property can be accessed from multiple points, including South Dixie Highway, Southwest 1st Avenue, and Cypress Road along the southern property boundary and West Atlantic Boulevard and Southeast 3rd Avenue along the northern boundary. One (1) underground storage tank (UST) containing propane of unknown capacity was observed adjacent to the site buildings during the site reconnaissance. Additionally, two (2) stilling wells that automatically record surface water elevations at a frequency the SFWMD designates were observed on the north side of the Pompano Canal, on the eastern portion of the subject property. One well was observed east of the spillway structure and the other was observed west of the spillway structure. No visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields were identified on the subject property.

The subject property is located in a mixed-use area including residential and commercial properties within the city of Pompano Beach. Multiple roads bisect the subject property. Dixie Highway and the Florida East Coast (FEC) Railway bisect the western portion of the subject property, and Southwest 1st Avenue/Northeast 1st Avenue bisect the central portion of the subject property. Cypress Road/Northeast 2nd Avenue bisect the eastern portion of the subject property. The subject property is bordered to the north by East Atlantic Boulevard followed by various commercial properties, such as Miami Grill, Pompano Pharmacy, a car wash, and a church. The subject property is bordered to the northeast by Bill Keith Community Park and a Dunkin Donuts restaurant followed by East Atlantic Boulevard. The subject property is bordered to the east by the Pompano Canal and residential properties. The subject property is bordered to the south by residential properties, Pompano Beach Cultural Center, and the City of Pompano Beach City Hall. The subject property is bordered to the west by the Pompano Canal and residential properties. One (1) gas station, Orion Fuels, was observed adjacent north of the subject property and a former dry cleaner, Hanners Cleaners, was observed adjacent northwest of the subject property. Additional information is provided in Section 5.3.2.

AECOM's historical research indicates that the subject property was developed with the Pompano Canal from at least 1947. From at least 1958, an apparent barrier is depicted at the east end of the Pompano Canal. This portion of the site remains unchanged until at least 1992, when the gated spillway structure is depicted. By at least 1992 historical aerial photograph depicts the central portion of the canal had been modified with a culvert, backfilled, and covered with paved parking and a park. From at least 1992, the Pompano Canal remained in its current configuration (as observed during AECOM's site visit). The FEC Railway, bisecting the western portion of the subject property, is depicted from at least 1947 and has remained in its current configuration (as observed during AECOM's site visit). Additionally, there are three main thoroughfares that bisect the subject property. Dixie Highway, bisects the western portion of the subject property, parallel to the FEC Railway, is depicted from at least 1947. By at least 1973, road improvements, such as road widening are depicted. Southwest 1st Avenue, bisecting the central portion of the subject property, is depicted from at least 1947 and has remained in its current configuration (as observed during AECOM's site visit). Lastly, Cypress Road/Northeast 2nd Avenue are depicted from at least 1947 bisecting the eastern portion of the subject property. By at least 1958, the previously depicted bridge allowing Cypress

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Road/Northeast 2nd Avenue to cross the Pompano Canal has been removed. By at least 1968, a bridge allowing the roadway to cross the Pompano Canal is depicted and the roadway has remained in its current configuration (as observed during AECOM's site visit). No historical on-site or off-site sources of concern were identified during this assessment.

The subject property is listed in the Environmental Data Resource, Inc. (EDR) environmental database search report as part of a larger Pompano Beach Northwest Area Brownfield listing. The Pompano Beach Northwest Area is listed on the Brownfield database under Area ID BF069901000 with a resolution date of November 23, 1999, with no additional information provided. According to the Florida Department of Environmental Protection's (FDEP) Brownfields GeoViewer, accessed online on January 24, 2025, the western portion of the subject property is located within the limits of the Brownfield area. Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence, potential or perceived presence of a hazardous substance, pollutant, or contaminant. A Brownfield area does not imply contamination; the environmental status of sites within a Brownfield area can only be evaluated by environmental assessments. This Brownfield listing does not in itself constitute a recognized environmental condition (REC). The subject property was not listed on any additional databases in the EDR environmental database report.

The following REC and VEC was identified during this assessment:

- Hanners Cleaners, Florida DEP DSCP D08, Hanner & Sons Inc, 209 West Atlantic Boulevard, is located approximately 140 feet north of the subject property. This site is listed on the Superfund Enterprise Management System (SEMS), Leaking UST (LUST), UST, Priority Cleaners, Resource Conservation and Recovery Act (RCRA) Non Generators/No Longer Regulated (NLR), Per- and Polyfluoroalkyl Substances (PFAS), Cleanup Sites, Dry Cleaners, Division of Waste Management Contamination (DWM Contam), Broward County Early Detection Incentive Environmental Assessment Remediation (EDIEAR), and Environmental Restoration Integrated Cleanup (ERIC) Waste Cleanup databases with Facility IDs FLD030753008, 9063877, 9601962 and ERIC_4221. The facility operated as a drycleaner since at least 1963 through 1989. A preliminary contamination assessment was conducted for the Hanners Cleaners site and adjoining former Chevron station in 1989, due to a previous geotechnical soil boring that noted solvent odors. This assessment indicated chlorinated solvents in the groundwater in excess of Groundwater Cleanup Target Levels (GCTLs) and elevated Photoionization Detector (PID) readings in soil borings, ranging from 4 parts per million (ppm) to 3,500 ppm. Petroleum hydrocarbons were also detected in exceedance of GCTLs during subsequent investigations conducted in the early 1990s. This site was accepted into the Drycleaning Solvent Cleanup Program on April 9, 1997. Remedial activities such as source removal, soil vapor extraction, chemical oxidation, and bioremediation were conducted at the site. The site received an NFA status March 18, 2005, in regard to the petroleum discharge. Natural Attenuation Monitoring (NAM) for chlorinated solvents started in September 2008 and is currently being completed. Furthermore, PFAS monitoring began in June 2023 with results indicating PFAS contaminants onsite. Results of the latest groundwater sampling event conducted in June 2024, reported volatile organic compounds (VOCs) in excess of the FDEP GCTLs and PFAS in excess of the Provisional GCTL (PGCTL). Continuation of annual groundwater monitoring for chlorinated VOCs was recommended, as well as expanded PFAS monitoring. The groundwater flow direction was recorded to the southwest during the latest sampling event, towards the subject property. Given the presence of chlorinated solvents and PFAS in groundwater and the groundwater flow direction is moving towards the subject property, this listing is considered a REC and a VEC.

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (Phase I ESA) was performed pursuant to AECOM Technical Services, Inc. (AECOM's) written proposal, dated October 30, 2024, and Contract No. 4600004507-Work Order No. 14 for the G57 Gated Spillway Facility identified by Broward County Parcel Identification Numbers (PINs) 4942-01-00-0990 (portion) and 4942-02-00-1040 (portion), Pompano Beach, Broward County, Florida (herein referred to as the "subject property"). This assessment was performed in advance of the potential spillway improvements at the subject property.

The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property. Per ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), de minimis conditions (DMCs) and significant data gaps as follows:

- A REC is defined by the ASTM standard as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.
- A HREC is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority and meeting unrestricted use criteria established by a regulatory authority or authorities without subjecting the subject property to any required controls.
- A CREC is defined as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (activity and use limitations or other property use limitations).
- DMCs are conditions related to a release that generally do not present a threat to human health or the environment and generally would not be subject to enforcement action if brought to the attention of the appropriate governmental agencies.
- A significant data gap is a data gap that affects the ability of the environmental professional to identify a REC.

In addition, a Tier 1 vapor encroachment screening (VES) is completed as part of this assessment. This screening is conducted in general accordance with ASTM International, Designation: E2600-22, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions dated May 2022 (ASTM E2600-22). The objective of the VES is to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a site visit, interviews, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property. Non-Scope Services per ASTM E1527-21 including, but not limited to, asbestos, lead paint, radon, floodplains and wetlands were not included in the scope of work. On April 17, 2024, EPA signed the final rule 20 to designate perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) collectively identified as per- and polyfluoroalkyl substances (PFAS) as hazardous substances under section 102(a) of CERCLA. This designation allows EPA to use its CERCLA enforcement authorities, as appropriate and where relevant statutory elements are met, which could shift the cost burden of CERCLA response costs from the Superfund to Potentially Responsible Parties (PRPs). As such, PFAS, is now considered part of the ASTM standard scope and is included in this scope of work.

This project was performed in general accordance with ASTM E1527-21 and AECOM's proposal, dated October 30, 2024. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in ASTM E1527-21, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a subject property, and this practice recognizes reasonable limits of time and cost. (Section 4.5.1 of ASTM E1527-21)
- Not Exhaustive - "All appropriate inquiries" does not mean an exhaustive assessment of a property. There is a point at which the cost of information or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-21)
- Comparison with Subsequent Inquiry – It should not be concluded or assumed that an investigation was not AAI merely because the inquiry did not identify RECs in connection with a subject property. ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-21)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-21 is employed. According to ASTM E2600-22, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. Screening is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with the property. (Section 4.5.1 of ASTM E2600-22)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained, or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-22)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-22)

This report was prepared pursuant to an agreement between SFWMD (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Report Viability

According to ASTM E1527-21, an ESA "meeting or exceeding this practice is presumed to be viable when it is conducted within 180 days of acquisition of the subject property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The dates of the components presented in 4.6.2(i), (iii), (iv), and (v) for interviews, review of government records, visual inspections, and declaration by environmental professional, shall be identified in the report. Completion of searches for recorded environmental cleanup liens (4.6.2(ii)) is a user responsibility; however, if the user has engaged the environmental professional to conduct these searches, then that date shall also be identified in the report." The table below lists the dates of completion for pertinent components of this Phase I ESA.

Component	Date of Issuance/Completion
Interviews with Owners, Operators and Occupants	January 22, 2025
Environmental Database Report	November 1, 2024
Visual Inspection of the Subject Property and Adjoining Properties	January 10 and 22, 2025
Declaration by Environmental Professional	August 20, 2025
Issuance of Report	August 20, 2025

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Report Viability Expiration Date*	April 30, 2025

* The 180-day viability date is based on the earliest referenced component noted in the table above.

1.5 Data Gaps

Per ASTM E1527-21:

- A data gap is defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.
- A data gap is considered a significant data gap if other information and/or professional experience raises reasonable concerns involving the effects of that data gap on the ability of the environmental professional to render an opinion regarding whether conditions exist that are indicative of RECs or CRECs.

The following data gaps (to include site-specific limitations) were encountered during the course of this assessment:

- Approximately 20% of the subject property is covered by water; therefore, not all areas were able to be observed/assessed. Based on the use of this portion of the subject property and a review of historical documents, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- During the site visit, AECOM did not access the roofs of the control buildings. AECOM's evaluation of the subject property focused on areas where hazardous substances are handled. The site contact did not report any hazardous substances associated with the roof. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this Phase I ESA. The user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property. Based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.
- A data failure was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1947. At the time of the photograph, the subject property appeared to be a canal with bridged roads crossing the canal (a developed use per ASTM E1527-21). Therefore, the ASTM E1527-21 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified agricultural land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to be significant so that it would impact the results of this assessment.
- It should be noted that not all standard historical sources, as defined per ASTM E1527-21, were reviewed as part of this assessment. In addition to recorded land title records, building department records were not reviewed. Based on information provided from the remaining standard historical sources, additional historical information obtained from building department records would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to be significant so that it would impact the results of this assessment.
- Per ASTM E1527-21, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

- Per the agreed scope-of-work and ASTM E1527-21, information related to certain site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-21; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant data gap to this investigation, given the historical use of the subject property as a restaurant.
- AECOM submitted a Public Records Request (PRR) to the Pompano Beach Fire Rescue and the Florida Department of Environmental Protection (FDEP) to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's PRR has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the Pompano Beach Fire Rescue or FDEP to our PRR will significantly alter the conclusions or recommendations of this report. However, if information is received from this PRR that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

2. Site Description

2.1 Site Location and Parcel Description

The subject property consists of 4.5-acres of land and canal situated on portions of two separate parcels identified by Broward County PIN's 4942-01-00-0990 and 4942-02-00-1040, located in Pompano Beach, Broward County, Florida. The subject property is a narrow, elongated irregular-shaped tract of land and canal, that includes a gated spillway structure, G57, that is situated within the Pompano Canal, and two (2) control buildings that house electrical equipment used to operate the water control structure. The subject property can be accessed from multiple points, including South Dixie Highway, Southwest 1st Avenue, and Cypress Road, along the southern property boundary and West Atlantic Boulevard and Southeast 3rd Avenue along the northern boundary.

The subject property occupies portions of two separate parcels of land and canal that are designated by the Broward County Property Appraiser with PIN's 4942-01-00-0990 and 4942-02-00-104. The approximate location of the subject property is illustrated on Figure 1 - Site Location Map and the property cards for the subject property are attached in Appendix B of the report.

2.2 Site Ownership

According to the Broward County Property Appraiser's records, the subject property is owned by SFWMD.

2.3 Site Visit

Ms. Kelsey Esteves and Mr. Matthew Schlak with AECOM visited the subject property on January 10, 2025, and Ms. Esteves visited the subject property again on January 22, 2025. The initial site visit included a visual inspection of the exterior portions of the subject property and the surrounding area. During the initial site visit, the AECOM team was accompanied by Mr. Josh Feltner, Leasing & Real Estate Support – Environmental Science Unit, of the SFWMD. During this visit, the onsite structures were inaccessible. As a result, a follow up visit was conducted in order to observe the interior of the buildings. During the January 22, 2025, site visit, Ms. Esteves was accompanied by Mr. Feltner to subject property buildings. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.5.

The site visit methodology consisted of walking over accessible areas of the subject property, including the building interiors and exteriors, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visit.

2.3.1 Site and Facility Description

The subject property is a narrow, elongated irregular-shaped tract of land and canal that includes a gated spillway structure, G57, situated within the Pompano Canal, and two (2) control buildings that house electrical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically controlled. The eastern and western portions of the subject property are occupied by the Pompano Canal.

The onsite structure is a reinforced concrete, gated spillway, with discharge controlled by two stem-operated, vertical lift gates. Operation of the gates is automatically controlled so that the gate operating system opens or closes the gates in accordance with the operational criteria.

During the site visit, one (1) underground storage tank (UST) containing an unknown quantity of propane was observed adjacent east of the control buildings. Additionally, two (2) stilling wells that automatically record surface water elevations at a frequency the SFWMD designates were observed on the north side of the Pompano Canal. One stilling well was observed east of the spillway and the other was observed west of the spillway, both on the eastern portion of the subject property. No visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields were identified on the subject property. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. In addition, no visual evidence

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

of significant corrosion was identified on the floors or walls of the spillway structure or control buildings of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

2.3.2 Surrounding Properties

The subject property is located in a mixed-use area including residential and commercial properties within the city of Pompano Beach. Multiple roads bisect the subject property. Dixie Highway and the Florida East Coast (FEC) Railway bisect the western portion of the subject property. Southwest 1st Avenue/Northeast 1st Avenue bisect the central portion of the subject property. Cypress Road/Northeast 2nd Avenue bisect the eastern portion of the subject property. The subject property is bordered to the north by Northwest 31st Avenue/East Atlantic Boulevard followed by various commercial properties, such as Miami Grill, Pompano Pharmacy, Orion Fuels (gas station) and a car wash. The subject property is bordered to the northeast by Bill Keith Community Park and a Dunkin Donuts restaurant. The subject property is bordered to the east by the Pompano Canal and residential properties. The subject property is bordered to the south by residential properties, Pompano Beach Cultural Center, and the City of Pompano Beach City Hall. The subject property is bordered to the west by the Pompano Canal.

AECOM identified a gasoline service station, Orion Fuels, and a former dry cleaner, Hanners Cleaners, within the immediate vicinity (500 feet) of the subject property. More information is provided in Section 5.3.2. In addition, no sensitive receptors (i.e., day care centers, schools, hospitals, water bodies) were identified as being located adjacent to the subject property.

2.3.3 Petroleum Products and Hazardous Materials

No petroleum products or hazardous materials use, or storage was observed at the subject property. Staining or visual evidence of a hazardous materials release was not observed at the time of the site visit.

2.3.4 Hazardous Waste

No evidence of hazardous waste generation was observed at the subject property, and the site contact reported no such activities. In addition, the subject property was not listed as a generator of hazardous waste in the site-specific database report.

2.3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the use of the site, PCBs are not expected to be present on-site.

No other hydraulic equipment (transformers, trash compactors, lifts) was identified on the subject property. The on-site loading docks are manually operated.

2.3.6 Aboveground Storage Tanks

Aboveground storage tanks (ASTs) were not observed on the subject property during the site visit. Mr. Hobbs indicated that no ASTs are located on the subject property or have historically been located on the subject property. In addition, no ASTs were listed in the site-specific environmental database report reviewed by AECOM or otherwise identified during AECOM's review of historical aerial photographs.

2.3.7 Underground Storage Tanks

One (1) UST containing an unknown quantity of propane was observed next to the onsite gated spillway structure on the northeastern portion of the subject property. Due to the nature of propane (gas at normal temperature and pressure), this propane storage is not considered a significant concern.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

2.3.8 Solid Waste

Based on the lack of activities on-site, no solid waste is expected to be generated at the subject property. However, miscellaneous trash such as metal cans and plastic bottles were observed on the eastern portion of the subject property. No evidence of oil or hazardous materials were observed in the vicinity of these discarded items and no evidence of a release was identified; therefore, the inappropriate disposal of these items is not considered a REC.

2.3.9 Water

Municipal water is not currently provided to the subject property. No potable water wells were observed at the subject property or reported by the site contact to be present on-site.

2.3.10 Wastewater

Due to the lack of activities on-site, no wastewater is currently generated on the subject property.

2.3.11 Stormwater

Stormwater from the subject property appears to drain via sheet flow to the stormwater drains located throughout the subject property. The subject property is connected to the municipal stormwater sewer system. No staining was observed in the vicinity of the storm drains.

2.3.12 Heating and Cooling

The on-site spillway structure and control building are not equipped with heating or cooling services.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

3. Environmental Setting

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of Pompano Beach, Boca Raton, West Dixie Bend and Fort Lauderdale North, Florida quadrangles and a review of the Google Earth application indicate that the subject property elevation ranges from approximately 0 to 4 feet above mean sea level (amsl). Approximately 0.82 acres of the 4.5-acre site consist of the Pompano Canal. However, the remaining subject property areas are developed and surface water runoff from the subject property is likely diverted to man-made drainage systems.

3.2 Soil/Geology

Site-specific geologic information was not identified during the course of this assessment; however, according to state and regional geologic sources, the subject property lies within the Gold Coast – Florida Bay Physiographic District. This is the area of south and southeastward sluggish drainage from Lake Okeechobee. The rocks and sediment are Pleistocene aged and are largely limestones or limestone cap rocks. The site lies within the sub classification of the Southern Atlantic Coastal Strip Subdistrict. The subdistrict consists of a broad ridge underlain by sand and shelly sand that probably originated as a shoal. Very gentle slopes exist on the westward side. The eastern side is more complex having been subsequently modified by marine processes. Within the Southern Atlantic Coastal Strip are six (6) geologically distinct sections. The subject site lies within the Pompano-Fort Lauderdale Gap. This is an area with no detectable coastal ridge; the elevations are generally 10-12 feet amsl (UF, 1981).

Surface soils at the subject property are mapped as the Urban Land, Immokalee-Urban land complex and Immokalee find sand (USDA, 2015). Urban Land soils consist of areas that are more than 70 percent covered by airports, shopping centers, parking lots, large buildings, streets and sidewalks, and other structures, so that the natural soil is not readily observable. Unoccupied areas of this land type, mostly lawns, parks, vacant lots and playgrounds, consist of soils in the Hallandale, Margate, Immokalee, and Basinger series that have been altered by fill material spread on the surface to an average thickness of about 12 inches. These unoccupied areas are in tracts too small to be mapped separately. The fill is mostly sandy material, some of which contains limestone and shell fragments. Immokalee fine sands are nearly level, deep, poorly drained soil on broad, low ridges that has a well-defined layer coated with organic matter at a depth of 30 inches or more. The Immokalee-Urban land complex consists of Immokalee fine sand and Urban land. The areas of these components are so intermixed or so small that separation at the scale of mapping is impractical. The open land consists of nearly level, poorly drained Immokalee soils that have been modified in most places by spreading sandy material on the surface of the soil to an average thickness of about 12 inches but ranging from about 6 to 20 inches. About 10 percent of the Immokalee soils have not been modified. The original soil below the fill material is Immokalee fine sand. Immokalee soils are a nearly level, deep, poorly drained soil on broad, low ridges that has a well-defined layer coated with organic matter at a depth of 30 inches or more. Immokalee soils are on flatwoods and low broad flats on marine terraces. Slopes range from 0 to 2 percent. It is on broad, low ridges in the eastern part of Broward County (USDA, 1981).

3.3 Groundwater/Hydrology

Site-specific hydrologic information was not identified during the course of this assessment. Based on topography and geologic conditions, uppermost groundwater likely occurs within 3 to 4 feet of the ground surface at the subject property (USGS, 1995). Uppermost groundwater flow direction likely follows local topography generally southeast and towards the Pompano Canal. It should be noted that the actual depth and flow direction of groundwater beneath the subject property cannot be determined without site-specific groundwater monitoring well data.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Sanborn Maps dated 1924, 1939 and 1950;
- Aerial photographs dated 1947, 1958, 1961, 1968, 1973, 1976, 1981, 1988, 1992, 1995, 1999, 2007, 2010, 2015, and 2019;
- Google Earth aerial images dated 1995, 1999, 2002 through 2008, and 2010 through 2012, and 2014 through 2024;
- Topographic maps dated 1949, 1962, 1969, 1973, 1983, 1995, 2012, 2015, 2018, and 2021;
- City directories for the years 1948, 1955, 1957, 1958, 1961, 1962, 1975, 1980, 1985, 1990, 1992, 1995, 1999, 2000, 2005, 2010, 2014, 2017, and 2020;

Building Department records were not reviewed during the course of this assessment. Copies of the historical documents/reports are provided in Appendix B.

4.1 Subject Property

AECOM's historical research indicates that the subject property was developed with the Pompano Canal from at least 1947. From at least 1958, an apparent barrier is depicted at the east end of the Pompano Canal. This portion of the site remains unchanged until at least 1992, when the gated spillway structure is depicted. By at least 1992 historical aerial photograph depicts the central portion of the canal had been modified with a culvert, backfilled, and covered with paved parking and a park. From at least 1992, the Pompano Canal remained in its current configuration (as observed during AECOM's site visit). The FEC Railway, bisecting the western portion of the subject property, is depicted from at least 1947 and has remained in its current configuration (as observed during AECOM's site visit). Additionally, there are three main thoroughfares that bisect the subject property. Dixie Highway, bisects the western portion of the subject property, parallel to the FEC Railway, is depicted from at least 1947. By at least 1973, road improvements, such as road widening are depicted. Southwest 1st Avenue, bisecting the central portion of the subject property, is depicted from at least 1947 and has remained in its current configuration (as observed during AECOM's site visit). Lastly, Cypress Road/Northeast 2nd Avenue are depicted from at least 1947 bisecting the eastern portion of the subject property. By at least 1958, the previously depicted bridge allowing Cypress Road/Northeast 2nd Avenue to cross the Pompano Canal has been removed. By at least 1968, a bridge allowing the roadway to cross the Pompano Canal is depicted and the roadway has remained in its current configuration (as observed during AECOM's site visit). No historical on-site or off-site sources of concern were identified during this assessment.

4.2 Adjoining Properties and Surrounding Area

According to the 1924 Sanborn Map, the FEC Railway extends from the subject property north. Ocean Drive (present-day Atlantic Boulevard) is depicted, and various buildings are also depicted north of Atlantic Boulevard, throughout the northern adjoining property. The Sanborn identifies a few buildings, such as the Methodist Church and a Baptist Church; however, the remaining buildings are unknown. In the 1939 Sanborn Map, Dixie Highway is depicted west of the FEC Railway and Northeast 1st Avenue is depicted east of the FEC Railway. Additionally, a filling station (present day Orion Fuels), depicted on the northeast corner of Atlantic Boulevard and Northeast 1st Avenue. By at least 1958, additional development of commercial buildings is depicted north of Atlantic Boulevard and east of the FEC Railway. By at least 1968, additional development of commercial buildings is depicted north of Atlantic Boulevard. By at least 1992, a small, commercial building adjacent east of the FEC Railway and north of Atlantic Boulevard has been razed. By at least 1999, a building adjacent west to Dixie Highway and north of Atlantic

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Boulevard has been razed. Since at least 1999, this area has remained in its current configuration (as observed during AECOM's site visit).

The Pompano Canal extends east, southeast from the subject property in the 1947 historical aerial photograph. Vegetated land is depicted south of the canal and residential homes are depicted north of the canal. By at least 1958, the canal has been widened and at least two finger canals extending south of the Pompano Canal are depicted. Additionally, a single-family home residential development is depicted south of the canal. By at least 1961, three finger canals are depicted. By at least 1973, the previously depicted residential homes have been removed, and the present-day townhouse complex is depicted north of the canal. By at least 1988, paved parking and apparent commercial offices are depicted east of the townhouse complex. The area remained generally unchanged until circa 2014, when construction activities are depicted; and by 2017, the present-day marina and multitenant residences are depicted east of the townhouse complex.

Historic maps and aerial photographs depict the area south of the subject property developed with the FEC Railway and three thoroughfares (Dixie Highway, Southwest 1st Avenue and Cypress Road), which extend south from the subject property. Vegetated land and at least five buildings are depicted in the 1947 historical aerial photograph. According to the 1939 and 1950 Sanborn maps, the southcentral building, east of Southwest 1st Avenue, is a post office. In the 1958 historical aerial photograph, various buildings and paved parking areas are depicted in the southcentral portion of the adjoining property. Residential homes and vegetated land are depicted on the southwest portion of the southern adjoining property. Residential homes and row crops are depicted on the southeast portion of the southern adjoining property. By at least 1968, the widening of Cypress Road is depicted. By at least 1973, additional buildings are depicted on the southcentral area of the southern adjoining property. The previously depicted residential homes in the southeast area have been replaced with an apartment complex. Additional residential homes are depicted on the southwest portion of the southern adjoining property. By at least 1981, apartment buildings are depicted on the southwest portion of the southern adjoining property. By at least 1992, the southcentral area has been redeveloped with the present-day City of Pompano Beach City Hall building. By at least 2008, the former post office and surrounding buildings in the southeast central area of the southern adjoining property are no longer depicted. By at least 2016, construction activities are depicted in this area and by at least 2017, the construction has been completed, and the present-day Pompano Beach Cultural Center and associated parking areas are depicted.

The Pompano Canal extends west from the subject property in the 1947 historical aerial photograph. The canal remains unchanged from at least 1947 to at least 1968. In the1973 historical aerial photograph, widening of the Pompano Canal is depicted. This area remained unchanged until circa 2010. The previously depicted vegetation on the north side of the canal bank has been replaced with apparent concrete. Since at least 2010, this area has remained in its current configuration (as observed during AECOM's site visit).

No historical off-site sources of concern were identified.

4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were not identified during this assessment, nor were they provided by the Client for review.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5. Database and Records Review

5.1 User Provided Information

Section 6 of ASTM E1527-21 states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-21; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Land Title and Judicial Records for Environmental Liens and Activity and Use Limitations

Information pertaining to chain-of-title, environmental liens or activity and use limitation was not provided to AECOM by the User (i.e., the client), nor was AECOM contracted to obtain information pertaining to chain-of-title, environmental liens or activity and use limitations.

5.3 Database Information

In accordance with the scope of work and ASTM E1527-21, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report. It should be noted that this information is reported as AECOM received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either AECOM or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. One (1) additional site was identified within the database report; however, EDR was not able to map this site to a specific location due to insufficient/contradicting address information. This site was included in the database report as an "orphan" site. Based upon AECOM's review, there does not appear to be significant concerns associated with this orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix C.

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

5.3.1 Subject Property

The subject property is listed in the EDR environmental database search report as part of a larger Pompano Beach Northwest Area Brownfield listing. The Pompano Beach Northwest Area is listed on the Brownfield database under Area ID BF069901000 with a resolution date of November 23, 1999, with no additional information provided. According to the FDEP's Brownfields GeoViewer, accessed online on January 24, 2025, the western portion of the subject property is located within the limits of the Brownfield area. Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence, potential or perceived presence of a hazardous substance, pollutant, or contaminant. A Brownfield area does not imply contamination; the environmental status of sites within a Brownfield area can only be evaluated by environmental assessments. This

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Brownfield listing does not in itself constitute a REC. The subject property was not listed on any additional databases in the EDR environmental database report.

5.3.2 Surrounding Sites

According to the environmental database report, numerous sites (over 20) were identified within their respective ASTM E1527-21 and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, one (1) of the sites, discussed below, is expected to present a REC and a VEC to the subject property.

- Hanners Cleaners, Florida DEP DSCP D08, Hanner & Sons Inc, 209 West Atlantic Boulevard, is located approximately 140 feet north of the subject property. This site is listed on the Superfund Enterprise Management System (SEMS), Leaking UST (LUST), UST, Priority Cleaners, Resource Conservation and Recovery Act (RCRA) Non Generators/No Longer Regulated (NLR), Per- and Polyfluoroalkyl Substances (PFAS), Cleanup Sites, Dry Cleaners, Division of Waste Management Contamination (DWM Contam), Broward County Early Detection Incentive Environmental Assessment Remediation (EDIEAR), and Environmental Restoration Integrated Cleanup (ERIC) Waste Cleanup databases with Facility IDs FLD030753008, 9063877, 9601962 and ERIC_4221. The facility operated as a drycleaner since at least 1963 through 1989. A preliminary contamination assessment was conducted for the Hanners Cleaners site and adjoining former Chevron station in 1989, due to a previous geotechnical soil boring that noted solvent odors. This assessment indicated chlorinated solvents in the groundwater in excess of Groundwater Cleanup Target Levels (GCTLs) and elevated Photoionization Detector (PID) readings in soil borings, ranging from 4 parts per million (ppm) to 3,500 ppm. Petroleum hydrocarbons were also detected in exceedance of GCTLs during subsequent investigations conducted in the early 1990s. This site was accepted into the Drycleaning Solvent Cleanup Program on April 9, 1997. Remedial activities such as source removal, soil vapor extraction, chemical oxidation, and bioremediation were conducted at the site. The site received an NFA status March 18, 2005, in regard to the petroleum discharge. Natural Attenuation Monitoring (NAM) for chlorinated solvents started in September 2008 and is currently being completed. Furthermore, PFAS monitoring began in June 2023 with results indicating PFAS contaminants onsite. Results of the latest groundwater sampling event conducted in June 2024, reported volatile organic compounds (VOCs) in excess of the FDEP GCTLs and PFAS in excess of the Provisional GCTL (PGCTL). Continuation of annual groundwater monitoring for chlorinated VOCs was recommended, as well as expanded PFAS monitoring. The groundwater flow direction was recorded to the southwest during the latest sampling event, towards the subject property. Given the presence of chlorinated solvents and PFAS in groundwater and the groundwater flow direction is moving towards the subject property, this listing is considered a REC and a VEC.

- Hardy Bros Station, Hardy Bros Serv Stnt Inc, 220 East Atlantic Boulevard, is located adjacent northeast of the subject property. This site is listed on the LUST, UST, DWM Contam, and EDR Historical Auto databases with Facility ID 8502085 under the Early Detection Incentive (EDI) program. The EDR Historical Auto database documents this site as a gasoline service station from 1985 through 1991. Per the information available in the regulatory files, this facility previously maintained three (3) 4,000-gallon capacity USTs containing unleaded gasoline, two (2) 4,000-gallon capacity UST's containing leaded gasoline, one (1) 4,000-gallon capacity UST containing diesel, two (2) 550-gallon capacity USTs, one containing waste oil and the other containing kerosene. On July 25, 1988, a discharge was reported in the former tank pit area, as a result of manual testing of onsite monitoring wells. The source and quantity of the release was not determined. Source removal activities were completed in December 1990 and December 2006. Approximately 762 tons of contaminated soils were removed from the site and properly disposed of. According to a Site Assessment Report (SAR) dated December 15, 2005, petroleum impacted groundwater was identified within the former tank farm and was not migrating offsite. NAM was performed from April 2007 to January 2008. Four consecutive quarters of NAM reported contaminants of concern (COCs) below applicable GCTLs. A Site Rehabilitation Completion Report (SRCR) and Well Abandonment Report was prepared and approved by the FDEP on May 28, 2008, granting No Further Action (NFA) status for the July 1988 EDI discharge. Since this facility has been remediated to the satisfaction of the FDEP and the facility's current regulatory status is listed as in compliance, this listing is not considered a REC to the subject property, in AECOM's opinion.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

- City of Pompano, 101 Southwest 1st Avenue, is located adjacent south of the subject property. This site is listed on the UST, Financial Assurance and Broward County Hazardous Materials (HM) databases. According to the available information reviewed, this facility maintains a 1,000-gallon capacity UST containing diesel fuel to power an emergency generator. According to the most recent FDEP Storage Tank Inspection Report, this facility's regulatory status is listed as "in compliance". The Financial Assurance and Broward County HM databases are compliance related. Given the lack of documented discharge and its current regulatory status, this listing is not considered a REC to the subject property, in AECOM's opinion.

- OMAC Real Estate, LLC/Harry's Texaco, (present-day Orion Fuels), 101 East Atlantic Boulevard, is located approximately 149 feet north of the subject property. This site is listed on the LUST, UST, DWM Contam, Financial Assurance, and Broward Co. HM databases identified with Facility ID 8502776. According to the available information reviewed, this facility previously maintained one (1) 12,000-gallon capacity UST containing leaded gasoline; two (2) 10,000-gallon capacity USTs, one containing diesel fuel and the other containing unleaded gasoline; and one (1) 550 -gallon capacity UST containing waste oil. An Early Detection Incentive Program letter dated August 17, 1987, stated a discharge occurred with no additional details. Previous assessment included the installation and sampling of seven (7) groundwater monitoring wells and screening soils with an Organic Vapor Analyzer (OVA) flame ionization detector. The results from the assessment indicated that petroleum hydrocarbons were not detected above their applicable GCTLs, and hydrocarbon vapors were not detected in the screened soils. No Fruther Action was recommended, and according to FDEP correspondence dated March 15, 1989, the site received NFA status and a Site Rehabilitation Completion Order (SRCO). The former USTs have been removed. Furthermore, the most recent Storage Tank Site Inspection Report, states this facility currently maintains two (2) 20,000-gallon USTs and lists this facility regulatory status as "in compliance". Since this facility has been remediated to the satisfaction of FDEP and its current regulatory status is listed as in compliance, this listing is not considered a REC to the subject property, in AECOM's opinion.

- Pompano Beach Replacement Library and Civic Campus, 128-140 Southwest 1st Avenue and 132 Southwest 1st Terrace, is located approximately 191 feet south of the subject property. This site is listed on the LUST, UST, DWM Contam, and Financial Assurance databases identified with Facility IDs 9805718 and ERIC_8604. According to the available regulatory information reviewed, this area was formerly occupied by an automobile maintenance facility, a former gas station, and Watson Plumbing. These facilities formerly maintained six (6) USTs, three (3) 3,000-gallon USTs and three (3) 500-gallon USTs, that were closed in place. In 2008, during the demolition of the former buildings, the USTs were discovered and properly removed from the site. During this time, petroleum hydrocarbon impacts to soil and groundwater were encountered. Previous assessments completed at these sites included the installation of soil borings to collect soil and groundwater samples; ground penetrating radar to locate potential underground sources of petroleum contaminants such as vents, USTs, or underground piping; and source removal activities. The contamination was delineated and confined within the boundaries of these sites. The sites received an SRCO and NFA status on December 29, 2010. Since the site has been remediated to the satisfaction of the Broward County Pollution Prevention, Remediation, and Air Quality Division, this listing is not considered a REC to the subject property, in AECOM's opinion.

- Exxon Station, 220 South Dixie Highway, is located approximately 1,530 feet southwest of the subject property. This site is listed on the LUST, UST, Cleanup Sites, DWM Contam, Broward Co. EDIEAR, Financial Assurance and Broward County HM databases. According to EDR, the distance to the subject is 202 feet west northwest of the subject property. However, after a review of the available information, this site is approximately 1,530 southwest of the subject property. Given the distance to the subject property, this listing is not considered a REC to the subject property, in AECOM's opinion.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 VES as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-22. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5.4.1 Subject Property

No on-site sources of vapor encroachment (e.g., UST, contaminated soil, groundwater plume, etc.) were identified during this assessment. Based on this information, a VEC due to an on-site source does not appear to exist.

5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that 2 CVOC/SVOC and 4 petroleum hydrocarbon impacted sites are located with the above-described radii of the subject property. However, 5 of the 6 sites can be ruled out due to their regulatory status (i.e., regulatory closure has been issued), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). It is AECOM's opinion that a VEC at the subject property due to an off-site source does appear to exist. The following offsite VEC was identified during this assessment:

- Hanners Cleaners, Florida DEP DSCP D08, Hanner & Sons Inc, 209 West Atlantic Boulevard, is located approximately 140 feet north of the subject property. This site is listed on the SEMS, LUST, UST, Priority Cleaners, RCRA Non Generators/NLR, PFAS, Cleanup Sites, Dry Cleaners, DWM Contam, Broward County EDIEAR, and ERIC Waste Cleanup databases with Facility IDs FLD030753008, 9063877, 9601962 and ERIC_4221. The facility operated as a drycleaner since at least 1963 through 1989. A preliminary contamination assessment was conducted for the Hanners Cleaners site and adjoining former Chevron station in 1989, due to a previous geotechnical soil boring that noted solvent odors. This assessment indicated chlorinated solvents in the groundwater in excess of GCTLs and elevated Photoionization Detector (PID) readings in soil borings, ranging from 4 ppm to 3,500 ppm. Petroleum hydrocarbons were also detected in exceedance of GCTLs during subsequent investigations conducted in the early 1990s. This site was accepted into the Drycleaning Solvent Cleanup Program on April 9, 1997. Remedial activities such as source removal, soil vapor extraction, chemical oxidation, and bioremediation were conducted at the site. The site received an NFA status March 18, 2005, in regard to the petroleum discharge. NAM for chlorinated solvents started in September 2008 and is currently being completed. Furthermore, PFAS monitoring began June 2023 with results indicating the presence of PFAS contaminates onsite. Results of the latest groundwater sampling event conducted in June 2024, reported VOCs in exceedance of the FDEP GCTLs and PFAS in exceedance of the PGCTL. Continued annual groundwater monitoring for chlorinated VOCs was recommended, as well as expanded PFAS monitoring. The groundwater flow direction was recorded to the southwest during the latest sampling event, towards the subject property. Given the presence of chlorinated solvents and PFAS in groundwater and the groundwater flow direction is moving towards the subject property, this listing is considered a REC and a VEC.

5.5 Agency File Review

5.5.1 Local

AECOM submitted a Public Records Request (PRR) to the Pompano Beach Fire Rescue on January 10, 2025, to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's PRR has not been received. Based on

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

AECOM's research to date, AECOM does not anticipate the response (if any) from the Pompano Beach Fire Rescue to our PRR will significantly alter the conclusions or recommendations of this report. However, if information is received from this PRR that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

5.5.2 County

AECOM reviewed the Broward County Property Appraiser's online database for records pertaining to the subject property's physical and parcel addresses. No records were identified for the subject property physical and parcel addresses.

5.5.3 State

AECOM submitted a Public Records Request to the FDEP on February 4, 2025, for information pertaining to the generation, transportation, storage, treatment and/or disposal of hazardous waste as well as any historical petroleum or chemical releases, leaking petroleum tanks, environmental assessment activities, and/or notices of violation that may have occurred on the subject property. No information was received during the time frame of this assessment.

5.5.4 Federal

AECOM searched the United States Environmental Protection Agency's (US EPA's) Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potentially hazardous waste sites. The subject property was not listed on the Envirofacts or SEMS databases.

6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM E1527-21, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings of this Phase I ESA and the opinions of the environmental professional.

6.1 Recognized Environmental Conditions

The following REC was identified during this assessment:

- Hanners Cleaners, Florida DEP DSCP D08, Hanner & Sons Inc, 209 West Atlantic Boulevard, is located approximately 140 feet north of the subject property. This site is listed on the SEMS, LUST, UST, Priority Cleaners, RCRA Non Generators/NLR, PFAS, Cleanup Sites, Dry Cleaners, DWM Contam, Broward County EDIEAR, and ERIC Waste Cleanup databases with Facility IDs FLD030753008, 9063877, 9601962 and ERIC_4221. The facility operated as a drycleaner since at least 1963 through 1989. A preliminary contamination assessment was conducted for the Hanners Cleaners site and adjoining former Chevron station in 1989, due to a previous geotechnical soil boring that noted solvent odors. This assessment indicated chlorinated solvents in the groundwater in excess of GCTLs and elevated Photoionization Detector (PID) readings in soil borings, ranging from 4 ppm to 3,500 ppm. Petroleum hydrocarbons were also detected in exceedance of GCTLs during subsequent investigations conducted in the early 1990s. This site was accepted into the Drycleaning Solvent Cleanup Program on April 9, 1997. Remedial activities such as source removal, soil vapor extraction, chemical oxidation, and bioremediation were conducted at the site. The site received an NFA status March 18, 2005, in regard to the petroleum discharge. NAM for chlorinated solvents started in September 2008 and is currently being completed. Furthermore, PFAS monitoring began June 2023 with results indicating the presence of PFAS contaminates onsite. Results of the latest groundwater sampling event conducted in June 2024, reported VOCs in exceedance of the FDEP GCTLs and PFAS in exceedance of the PGCTL. Continued annual groundwater monitoring for chlorinated VOCs was recommended, as well as expanded PFAS monitoring. The groundwater flow direction was recorded to the southwest during the latest sampling event, towards the subject property. Given the presence of chlorinated solvents and PFAS in groundwater and the groundwater flow direction is moving towards the subject property, this listing is considered a REC and a VEC.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the subject property.

6.4 Vapor Encroachment Conditions

The following VEC was identified during this assessment:

- Hanners Cleaners, Florida DEP DSCP D08, Hanner & Sons Inc, 209 West Atlantic Boulevard, is located approximately 140 feet north of the subject property. This site is listed on the SEMS, LUST, UST, Priority Cleaners, RCRA Non Generators/NLR, PFAS, Cleanup Sites, Dry Cleaners, DWM Contam, Broward County EDIEAR, and ERIC Waste Cleanup databases with Facility IDs FLD030753008, 9063877, 9601962 and ERIC_4221. The facility operated as a drycleaner since at least 1963 through 1989. A preliminary

contamination assessment was conducted for the Hanners Cleaners site and adjoining former Chevron station in 1989, due to a previous geotechnical soil boring that noted solvent odors. This assessment indicated chlorinated solvents in the groundwater in excess of GCTLs and elevated Photoionization Detector (PID) readings in soil borings, ranging from 4 ppm to 3,500 ppm. Petroleum hydrocarbons were also detected in exceedance of GCTLs during subsequent investigations conducted in the early 1990s. This site was accepted into the Drycleaning Solvent Cleanup Program on April 9, 1997. Remedial activities such as source removal, soil vapor extraction, chemical oxidation, and bioremediation were conducted at the site. The site received an NFA status March 18, 2005, in regard to the petroleum discharge. NAM for chlorinated solvents started in September 2008 and is currently being completed. Furthermore, PFAS monitoring began June 2023 with results indicating the presence of PFAS contaminates onsite. Results of the latest groundwater sampling event conducted in June 2024, reported VOCs in exceedance of the FDEP GCTLs and PFAS in exceedance of the PGCTL. Continued annual groundwater monitoring for chlorinated VOCs was recommended, as well as expanded PFAS monitoring. The groundwater flow direction was recorded to the southwest during the latest sampling event, towards the subject property. Given the presence of chlorinated solvents and PFAS in groundwater and the groundwater flow direction is moving towards the subject property, this listing is considered a REC and a VEC.

6.5 De Minimis Conditions

Based on the above-described activities, no DMCs were identified in connection with the subject property.

6.6 Significant Data Gaps

ASTM E1527-21 requires the environmental professional document significant data gaps, as well as any exceptions to, or deletions from the ASTM Practice E1527-21. A significant data gap is a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Based on the above-described activities, no significant data gaps were identified during this Phase I ESA.

7. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the G57 Gated Spillway Facility identified by Broward County PINs 4942-01-00-0990 (portion) and 4942-02-00-1040 (portion), Pompano Beach, Broward County, Florida, the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed the following REC and VEC in connection with the subject property:

- Hanners Cleaners, Florida DEP DSCP D08, Hanner & Sons Inc, 209 West Atlantic Boulevard, is located approximately 140 feet north of the subject property. This site is listed on the SEMS, LUST, UST, Priority Cleaners, RCRA Non Generators/NLR, PFAS, Cleanup Sites, Dry Cleaners, DWM Contam, Broward County EDIEAR, and ERIC Waste Cleanup databases with Facility IDs FLD030753008, 9063877, 9601962 and ERIC_4221. The facility operated as a drycleaner since at least 1963 through 1989. A preliminary contamination assessment was conducted for the Hanners Cleaners site and adjoining former Chevron station in 1989, due to a previous geotechnical soil boring that noted solvent odors. This assessment indicated chlorinated solvents in the groundwater in excess of GCTLs and elevated Photoionization Detector (PID) readings in soil borings, ranging from 4 ppm to 3,500 ppm. Petroleum hydrocarbons were also detected in exceedance of GCTLs during subsequent investigations conducted in the early 1990s. This site was accepted into the Drycleaning Solvent Cleanup Program on April 9, 1997. Remedial activities such as source removal, soil vapor extraction, chemical oxidation, and bioremediation were conducted at the site. The site received an NFA status March 18, 2005, in regard to the petroleum discharge. NAM for chlorinated solvents started in September 2008 and is currently being completed. Furthermore, PFAS monitoring began June 2023 with results indicating the presence of PFAS contaminates onsite. Results of the latest groundwater sampling event conducted in June 2024, reported VOCs in exceedance of the FDEP GCTLs and PFAS in exceedance of the PGCTL. Continued annual groundwater monitoring for chlorinated VOCs was recommended, as well as expanded PFAS monitoring. The groundwater flow direction was recorded to the southwest during the latest sampling event, towards the subject property. Given the presence of chlorinated solvents and PFAS in groundwater and the groundwater flow direction is moving towards the subject property, this listing is considered a REC and a VEC.

8. Environmental Professional Statement

Mr. Madabhushi was the Environmental Professional (EP) for this project. Mr. Madabhushi's EP statement is below and his resume is provided in Appendix D:

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

RETURN RECEIPT REQUESTED

Ms. Fawn Powers
City of Pompano Beach
100 West Atlantic Blvd
Pompano Beach, FL 33060

Subject: Site Rehabilitation Completion Order
Hardy Brother's Station
220 East Atlantic Boulevard
Pompano Beach, Broward County
FDEP Facility ID# 068502085
Discharge Date: July 25, 1988 (EDI)
Discharge Score: 60

Dear Ms. Powers:

The Broward County Pollution Prevention and Remediation Division (PPRD) has reviewed the Site Rehabilitation Completion Report (SRCR) and No Further Action Proposal (NFAP) dated February 19, 2008 (received February 22, 2008), and the Monitoring Well Abandonment Report dated April 9, 2008 (received April 21, 2008), prepared and submitted by Streamline Environmental, Inc., for the petroleum product discharge referenced above. Documentation submitted with the SRCR/NFAP confirms that criteria set forth in Subsection 62-770.680(1), Florida Administrative Code (F.A.C.), have been met. Please refer to the attached maps of the source property and analytical summary tables. The SRCR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (SRCO). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharge referenced above, except as set forth below.

In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SRCR/NFAP or otherwise allowed by Chapter 62-770, F.A.C.

Legal Issues

The Department's Order shall become final unless a timely petition for an administrative hearing is filed under Sections 120.569 and 120.57, Florida Statutes (F.S.), within 21 days of

receipt of this Order. The procedures for petitioning for an administrative hearing are set forth below.

Persons affected by this Order have the following options:

(A) If you choose to accept the Department's decision regarding the SRCR/NFAP you do not have to do anything. This Order is final and effective as of the date on the top of the first page of this Order.

(B) If you choose to challenge the decision, you may do the following:

(1) File a request for an extension of time to file a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for an administrative hearing; or

(2) File a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for an Administrative Hearing

For good cause shown, pursuant to Subsection 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for an administrative hearing. Such a request must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from the City of Pompano Beach, shall mail a copy of the request to the City of Pompano Beach at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for an administrative hearing must be made.

How to File a Petition for an Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative hearing under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from City of Pompano Beach, shall mail a copy of the petition to City of Pompano Beach at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsection 120.569(2), F.S. and Rule 28-106.201, F.A.C., a petition for an administrative hearing shall contain the following information:

(a) The name, address, and telephone number of each petitioner; the name, address, and telephone number of the petitioner's representative, if any; the facility owner's name and address, if different from the petitioner; the FDEP facility number, and the name and address of the facility;
(b) A statement of when and how each petitioner received notice of the Department's action or proposed action;
(c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;
(d) A statement of the disputed issues of material fact, or a statement that there are no disputed facts;
(e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;
(f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action; and
(g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective as of the date on the top of the first page of this Order. Timely filing a petition for an administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the Department's clerk (see below).

Questions

Any questions regarding the PPRD's review of your SRCR/NFAP should be directed to John J. Gomolka, P.G. at (954) 519-1279. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for an administrative hearing or a request for an extension of time to file a petition for an administrative hearing.

The FDEP Facility Number for this facility is 068502085. Please use this identification on all future correspondence with the Department or the PPRD.

Sincerely,

Michael E. Ashey, Chief
Bureau of Petroleum Storage Systems

FILING AND ACKNOWLEDGMENT
FILED, on this date, pursuant to §120.52 Florida Statutes, with the designated Department Clerk, receipt of which is hereby acknowledged.

Carol Walton 5-28-08
Clerk (or Deputy Clerk) Date

P.E. CERTIFICATION

Site Rehabilitation Completion Report/No Further Action Proposal dated February 19, 2008 (received February 22, 2008), for Hardy Brother's Station, located at 220 East Atlantic Boulevard, Pompano Beach, FDEP Facility ID# 068502085.

I hereby certify that in my professional judgment, the components of this Site Rehabilitation Completion Report/No Further Action Proposal prepared for the July 25, 1988 petroleum product discharge discovered at the above-referenced facility satisfy the requirements set forth in Chapter 62-770, Florida Administrative Code (F.A.C.), and that the conclusions in this report on the effectiveness of the remedial action which has been conducted (confirmed by subsequent Post Active Remediation Monitoring) provide reasonable assurances that the site rehabilitation objectives stated in Chapter 62-770, F.A.C., have been met.

____ I personally completed this review.

Subject: Site Rehabilitation Completion Order
City of Pompano Beach Parcels, Petroleum Contamination
128-140 SW 1st Ave. and 132 SW 1st Terrace, Pompano Beach, Florida 33060
EAR License No. 0981; FDEP Facility ID No. 069805718;
Discharge Date: October 10, 2008
Brownfield Area ID No. BF069901000, Brownfield Site ID No. BF069901001

Dear Ms. Delfico:

The Broward County Pollution Prevention, Remediation and Air Quality Division (Division) has reviewed the Site Rehabilitation Completion Report (SRCR) and No Further Action Proposal (NFAP) dated December 10, 2010 (received December 13, 2010), and the Monitoring Well Abandonment Report dated December 20, 2010 (received December 21, 2010), prepared and submitted by AECOM, Inc. for the property referenced above. Documentation submitted with the SRCR/NFAP confirms that criteria set forth in Subsection 62-785.680(1), Florida Administrative Code (F.A.C.), have been met. Please refer to the attached maps of the source property and analytical summary tables. The SRCR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for contamination associated with the discharge referenced above, except as set forth below.

(1) In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Department may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SRCR/NFAP or otherwise allowed by Chapter 62-785, F.A.C.

Legal Issues

The Division's Order shall become final unless a timely petition for an administrative hearing is filed under Sections 120.569 and 120.57, Florida Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for an administrative hearing are set forth below.

Persons affected by this Order have the following options:

(A) If you choose to accept the Division's decision regarding the SRCR/NFAP you do not have to do anything. This Order is final and effective as of the date on the top of the first page of this Order.

(B) If you choose to challenge the decision, you may do the following:

(1) File a request for an extension of time to file a petition for an administrative hearing with the Division within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Division in an attempt to informally resolve any disputes without first filing a petition for an administrative hearing; or

(2) File a petition for an administrative hearing with Broward County within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for an Administrative Hearing

For good cause shown, pursuant to Subsection 62-110.106(4), F.A.C., the Division may grant a request for an extension of time to file a petition for an administrative hearing. Such a request must be filed (received) by Broward County in the Office of the Director of Pollution Prevention, Remediation and Air Quality Division, Broward County Environmental Protection and Growth Management Department (Department) at One North University Drive, Suite 203, Plantation, Florida 33324, within 21 days of receipt of this Order. Petitioner, if different from the City of Pompano Beach, shall mail a copy of the request to the City of Pompano Beach at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for an administrative hearing must be made.

How to File a Petition for an Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative hearing under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by Broward County in the Office of the Director of Pollution Prevention, Remediation and Air Quality Division, Broward County Environmental Protection and Growth Management Department at One North University Drive, Suite 203, Plantation, Florida 33324, within 21 days of receipt of this Order. Petitioner, if different from the City of Pompano Beach, shall mail a copy of the request to the City of Pompano Beach at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsection 120.569(2), F.S. and Rule 28-106.201, F.A.C., a petition for an administrative hearing shall contain the following information:

(a) The name, address, and telephone number of each petitioner; the name, address, and telephone number of the petitioner's representative, if any; the facility owner's name and address, if different from the petitioner; the Brownfield Site ID number, and the name and address of the facility;
(b) A statement of when and how each petitioner received notice of the Division's action or proposed action;
(c) An explanation of how each petitioner's substantial interests are or will be affected by the Division's action or proposed action;
(d) A statement of the disputed issues of material fact, or a statement that there are no disputed facts;
(e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Division's action or proposed action;
(f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Division's action or proposed action; and
(g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Division to take with respect to the Division's action or proposed action.

This Order is final and effective as of the date on the top of the first page of this Order. Timely filing a petition for an administrative hearing postpones the date this Order takes effect until the Division issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Division pursuant to meetings with the Division.

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with Broward County in the Office of the Director of Pollution Prevention, Remediation and Air Quality Division, Broward County Environmental Protection and Growth Management Department at One North University Drive, Suite 203, Plantation, Florida 33324, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the Director of the Pollution Prevention, Remediation and Air Quality Division, acting as clerk.

Questions

Any questions regarding the Division's review of your SRCR/NFAP should be directed to Paul Waite, P.E., at (954) 519-1467. Questions regarding legal issues should be referred to the Office of the County Attorney, 115 S Andrews Avenue, Fort Lauderdale, FL 33301, (954) 357-7600. Contact with any of the above does not constitute a petition for an administrative hearing or a request for an extension of time to file a petition for an administrative hearing.

The Brownfield Facility ID Number for this facility is BF069901001. Please use this identification on all future correspondence with the Division.

Sincerely,

Jeffery D. Halsey, Director
Pollution Prevention, Remediation and Air Quality Division

FILING AND ACKNOWLEDGMENT
FILED, on this date, pursuant to §120.52 Florida Statutes, with the designated Department Clerk, receipt of which is hereby acknowledged.

Clerk (or Deputy Clerk) — Date 12/30/10

P.E. CERTIFICATION

Site Rehabilitation Completion Report/No Further Action Proposal dated December 10, 2010 (received December 13, 2010), for City of Pompano Beach Parcels, Petroleum Contamination, located at 128-140 SW 1st Avenue and 132 SW 1st Terrace, Pompano Beach, Florida 33060.
FDEP Facility ID No. 069805718, Discharge Date: October 10, 2008
Brownfield Area ID No. BF069901000, Brownfield Site ID No. BF069901001

I hereby certify that in my professional judgment, the components of this Site Rehabilitation Completion Report/No Further Action Proposal prepared for the October 10, 2008, petroleum product discharge discovered at the above-referenced facility satisfy the requirements set forth in Chapter 62-785, Florida Administrative Code (F.A.C.), and that the conclusions in this report on the effectiveness of the remedial action which has been conducted (confirmed by subsequent monitoring) provide reasonable assurances that the site rehabilitation objectives stated in Chapter 62-785, F.A.C., have been met.

_X_ I personally completed this review.

LEGEND:

- ⊙ M&E/AECOM Limited Phase II ESA Soil Boring/Direct Push Sample Locations, August 2006
- ● Confirmatory Soil Sampling Locations, May 2010

ND - Not Detected
NR - Not Reported

BDL - Below Detection Limit
NS - Not Sampled

U indicates that the compound was analyzed for but not detected
I indicates that the concentration was reported between the lab MDL and the lab PQL
<SCTL - Less than Ch. 62-777 FAC - Soil Cleanup Target Levels - Leachability Based on Groundwater Criteria
Bold Text indicates analyte detected above the Ch. 62-777 FAC SCTL-Residential or Industrial Exposure
Shaded Text indicates analyte detected above the Ch. 62-777 FAC SCTL-Leachability Based on Groundwater Criteria
Concentrations are expressed in milligram per kiligram (mg/kg)

LEGEND:

- AECOM SAR Soil Sample Locations June and August 2009
- M&E/AECOM Limited Phase II ESA Soil Boring/Direct Push Sample Locations, August 2006
- Dunkelberger Soil Sample Locations, October 2008
- Confirmatory Soil Sampling Locations, May 2010

ND - Not Detected NR - Not Reported
NS - Not Sampled NA - Not Analyzed
BDL - Below Detection Limits
-- Benzo(a)pyrene equivelant was not calculated due to carcinogenic PAHs were not detected.
<SCTLs - Less than SCTL - Leachability Based On Groundwater Criteria

U indicates that the compound was analyzed for but not detected
I indicates that the concentration was reported between the lab MDL and the lab PQL
Bold Text indicates analyte detected above the Ch. 62-777 FAC SCTL-Residential or Industrial Exposure
Shaded Text indicates analyte detected above the Ch. 62-777 FAC SCTL-Leachability Criteria
Concentrations are expressed in milligram per kiligram (mg/kg)

SCALE:

40 0 40

Feet

Notes:
mg/Kg - milligrams per kilogram
TRPH - Total Residual Petroleum Hydrocarbon
NS - Not Sampled ND - Not Detected BDL - Below Detection Limits NR - Not Reported
Chapter 62-777 Florida Administrative Code (FAC) - Contaminant Cleanup Target Levels - Table II Soil Cleanup Target Levels (SCTL)
U indicates that the compound was analyzed for but not detected
I indicates that the concentration was reported between the lab method detection limit (MDL) and the lab practical quantitation limit (PQL)
V indicates the analyte was detected in both the sample and the associated method blank
-- Benzo(a)pyrene equivalent was not calculated due to the carcinognic PAHs were not detected
Bold text indicates analyte detected above Ch. 62-777 FAC SCTL residential and/or industrial direct-exposure criteria.
Shaded text indicates analyte detected above Ch. 62-777 FAC SCTL leachability based on groundwater criteria
"2" - Estimated - Surrogate recovery outside of Genapure established control limits, not exceeding 1 acid and/or 1 base surrogate. As per Genapure SOP for 625/8270 when 1 acid or 1 base surrogate fails, the surrogate flagged and data reported
"3" - NCR (no calibration required) - Result was based on a one-point calibration
= Site concentrations for carcinogenic polycyclic aromatic hydrocarbons must be converted to Benzo(a)pyrene equivalents before comparison with the appropriate direct exposure SCTL for Benzo(a)pyrene using the approach described in the February 2005 'Final Technical Report: Development of Cleanup Target Levels (CTLs) for Chapter 62-777, F.A.C.'

LEGEND:

- Monitoring Well Locations
- AECOM Deep Monitoring Well Location
- Abandoned Monitoring Well Locations

Concentrations are expressed in micrograms per liter (ug/l)

U indicates that the compound was analyzed for but not detected
I indicates that the concentration was reported between the lab MDL and the lab PQL
V indicates that the concentration was detected in the sample and the associated method blank
J Estimated value; value may not be accurate
Bold Text indicates analyte detected above the Ch. 62-777 FAC GSWCTL
Shaded Text indicates analyte detected above the Ch. 62-777 FAC NADC
<GSWCTLs - indicates concentrations below Ch. 62-777 FAC GSWCTL

NS - Not Sampled
ND - Not Detected

RE: 2024 ANNUAL GROUNDWATER MONITORING REPORT
FORMER HANNERS CLEANERS
35 NORTH DIXIE HIGHWAY
POMPANO BEACH, BROWARD COUNTY, FLORIDA
FACILITY IDENTIFICATION NUMBER: ERIC_4221

Dear Mr. McGrane:

WSP USA Inc. (WSP), is pleased to submit this report to the Florida Department of Environmental Protection (DEP) for the annual groundwater monitoring event and expanded per- and polyfluoroalkyl Substances (PFAS) monitoring event conducted at the above-referenced site (DEP Facility Identification Number ERIC_4221). This work was conducted under Florida DEP contract number HW685, Task Assignment Number DC034B. Services were performed in accordance with the DEP-approved task assignment, Drycleaning Solvent Cleanup Program (DSCP) requirements, and Chapter 62-780 of the Florida Administrative Code (FAC).

SITE BACKGROUND

The site is located in Township 48, Range 42, Section 35 in Pompano Beach, Broward County, Florida. The site is located on the northwest corner of the intersection of West Atlantic Boulevard and North Dixie Highway on Real Estate Parcel ID 484235080310 owned by the Pompano Beach Community Redevelopment Agency. The site's former address was 209 West Atlantic Boulevard, Pompano Beach, Florida, and its current address is 35 North Dixie Highway, Pompano Beach, Florida. The surrounding area is predominantly commercial along the major roads and predominantly residential along the side streets. Figure 1 illustrates the location of the site relative to roadways, buildings, and waterbodies using the United States Geological Survey Quadrangle as a base map. Figures 2 and 3 illustrate the layout of site features including monitoring well locations, adjacent roadways, and buildings using an aerial photograph as a base map.

The site was accepted into the DSCP in April of 1997. According to the DSCP application, dated April 1996, the property owner at the time of application was Benjamin Y. Saxon, P.A., of Melbourne, Florida and the facility operator was William D. Hanner of Pompano Beach, Florida. According to the application, the site operated as a drycleaner from 1966 to 1989. The Phase II Site Inspection Report dated March 1993, indicated that

tetrachloroethene (PCE) was the only solvent used in the drycleaning process. The southern portion of the site has been vacant since 1989. On the northern portion of the site, there is a small building occupied by a patio furniture retailer.

Previous Investigations and Remedial Activities

During a 1989 assessment of a Chevron Gas Station to the east of the site, Jamal and Associates detected elevated concentrations of PCE, trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE) in the groundwater and elevated organic vapor concentrations near the northeast corner of the Chevron Gas Station building. The detected contamination was determined to be attributable to the Hanner's Cleaners property. Two underground storage tanks (USTs), registered as diesel tanks, were removed in June 1990. Soil samples from both tank pits contained elevated concentrations of PCE, TCE, and cis-1,2-DCE, suggesting that the USTs may have been used to store drycleaning solvents. Samples collected from beneath the tank located on the east side of the building contained higher concentrations of these contaminants.

As a result of those findings, the DEP began to investigate a connection between contamination detected at Hanner's Cleaners and similar contamination detected in City of Pompano Beach Public Supply Well #8, located approximately 2,000 feet northeast of the site. The DEP issued a Notice of Violation and Order for Corrective Action in October 1990 to Mr. Saxon and Mr. Hanner and followed that with a Consent Order, which neither party has signed.

In 1991, ABB Environmental Services (ABB-ES) installed a shallow monitoring well at each of the prior tank locations. Groundwater samples obtained in September 1991 contained elevated concentrations of PCE in MW001 (17,000 micrograms per liter [µg/L]) and lower concentrations of PCE, vinyl chloride, and benzene, toluene, ethylbenzene, and xylenes (BTEX) compounds in MW002. In March 1993, ABB-ES submitted a Phase II Site Inspection report to the DEP. Analysis of soil and groundwater samples indicated that the highest concentrations of chlorinated hydrocarbons were centered around MW001 (1,800 µg/L PCE, 170,000 µg/L 1,2-dichloroethene, and 1,400 µg/L vinyl chloride). Monitoring well MW005, located downgradient of MW001, contained the highest concentration of TCE (3,600 µg/L). A surface soil sample near the northeast corner of the building contained a PCE concentration of 120,000 micrograms per kilogram (µg/kg) and a subsurface soil sample near MW001 contained a PCE concentration of 9,700 µg/kg.

Between June and September 1993, AECOM conducted a contamination assessment for the Broward County Department of Natural Resource Protection. The organic vapor concentration in soil boring adjacent to MW001 exceeded 1,000 parts per million. The highest concentrations of chlorinated solvents in groundwater were detected in the sample from MW001 (2,770 µg/L PCE, 2,070 µg/L TCE, and 1,420 µg/L vinyl chloride).

In September 1996, Black and Veatch conducted an assessment for the U.S. Environmental Protection Agency, including the collection of samples from surface soil, subsurface soil, and groundwater monitoring wells. A groundwater sample from monitoring well MW001 had the highest concentrations of chlorinated hydrocarbons (26,000 µg/L 1,2-dichloroethene and 2,100 µg/L vinyl chloride).

In 1998, Metcalf & Eddy (M&E) conducted a comprehensive soil and groundwater assessment at the site. The results were documented in the Contamination Assessment Report (CAR) dated August 17, 1998. The site assessment activities included the collection of soil gas samples, which indicated detections of PCE and TCE. The soil gas sample taken from SG009 exhibited the greatest concentration of PCE and TCE at 1,390 milligrams per cubic meter (mg/m^3) and 77.4 mg/m^3, respectively. Soil samples were collected which detected concentrations of

PCE ranging from 37,200 µg/kg (adjacent to the former UST location on the east side of the building), to 6 µg/kg. Thirty-three direct push borings were performed, with groundwater samples taken at 102 discrete locations. PCE was detected at concentrations ranging from 42,000 µg/L to 2.5 µg/L; TCE was detected at concentrations ranging from 12,000 µg/L to 5 µg/L; cis-1,2-DCE was detected at concentrations ranging from 170,000 µg/L to 1.1 µg/L, trans-1,2-DCE was detected in concentrations ranging from 260 µg/L to 1.2 µg/L, and vinyl chloride was detected at concentrations ranging from 59,000 µg/L to 3.9 µg/L. Groundwater contamination was reported to cover an area of approximately 36 acres and was defined vertically near the source area. Based on these findings, M&E recommended a source removal within the aquifer and vadose zone.

In May 2000, M&E oversaw the excavation and disposal of approximately 136 tons of soil from an approximately 30-foot long, by 15-foot wide, by 6 feet deep area in the vicinity of the former UST on the east side of the former Hanner's Cleaners building.

In October 2000, M&E submit a Remedial Action Plan to DEP which included limited soil excavation, SVE system installation, and performance monitoring.

On April 17, 2001, M&E oversaw the startup of an SVE system, as documented in the Soil Vapor Extraction System Startup Report, dated May 2001, and subsequent Response to Comments dated May 23, 2001. M&E's SVE Operation and Maintenance (O&M) Report (February 2002 – April 2002), recommended no further action for soil based on: 1) the completion of one year of nearly-continuous system operation, with repeated demonstration through vacuum readings that the system has achieved a radial influence to capture the plume as designed, 2) the absence of detectable concentrations of chlorinated volatile organic compounds (VOCs), for two consecutive quarters, in soil vapor samples collected at the SVE system blower effluent, and 3) the substantial reduction in contaminant concentrations as demonstrated by the confirmatory soil samples collected and analyzed in May of 2002. Confirmatory soil samples were collected to the water table at eight locations that previously exceeded the applicable leachability-based Soil Cleanup Target Levels (SCTLs) in Chapter 62-777, F.A.C., Table II, when initially sampled in June of 1999. The results of the confirmatory samples were below applicable leachability-based SCTLs at each location except for two (SB028 and SB030). The PCE concentration in a soil sample collected from boring SB028 exceeded the leachability-based SCTL of 30 ug/kg with a sample result of 37.4 ug/kg. The PCE and TCE concentrations in a soil sample collected from boring SB030 also exceeded the leachability-based SCTLs with sample results of 293 ug/kg and 39.8 ug/kg, respectively. In both borings, only the sample collected at 6 feet below ground surface (bgs) exceeded SCTLs. Based on the range in groundwater depth at site from approximately 5 to 7 ft bgs over the course of a year, M&E attributed the exceedance to recontamination by groundwater during wet periods when a high-water table was encountered.

In April 2001, M&E submit a Remedial Action Plan for Chemical Oxidation for Groundwater. M&E subsequently installed 25 new injection wells to a depth of 40 feet bgs (INJ-7 through INJ-31). Between June 2000 and April 2002, a total of 146,240 gallons of Fenton's Reagent was injected in the source area to address the suspected presence of a dense non-aqueous phase liquid (DNAPL).

In June 2004, a total of 128 tons of soil was excavated from an approximately 10 feet x 15 feet area to a depth of 18 feet bgs in the vicinity of monitoring well MW001R. Prior to backfilling, 6 gallons of ethyl lactate was added to the groundwater in the open excavation to provide a carbon source for enhanced bioremediation.

In November 2004, an enhanced in-situ bio-stimulation pilot test was conducted, consisting of the injection of 4.5 gallons of ethyl lactate. Post-injection sampling was also performed to evaluate if the addition of a carbon source

would accelerate the reductive dechlorination process. The results of the pilot test were positive. Subsequently, 310 gallons of ethyl lactate was injected into groundwater using existing injection wells installed to a depth of 40 feet bgs between February 2006 and October 2007.

In February of 2008, M&E oversaw the demolition and disposal of the concrete slab of the Hanner's Cleaners building, and the excavation and disposal of soil from five excavation zones beneath the slab. During soil excavation, a concrete structure was identified and removed in excavation zone 5, resulting in an excavation depth of approximately 4 feet bgs. Excavation zones 1, 2, 3, and 4 were completed to a depth of approximately 1 foot bgs. Excavated soil was placed into four stockpiles and sampled for chlorinated VOCs. Sample results from stockpile #2 (SS-2), which contained soil from around the concrete structure, exceeded the leachability-based SCTL for PCE. M&E collected additional confirmation samples to the north (SS-3), and to the south (SS-4) of SS-2 to confirm that impacted soils had been removed prior to backfilling. Sample results of the confirmation samples were below the leachability-based SCTLs. The concrete slab measured approximately 150 feet x 80 feet and was an average of 1 foot thick. The soil from the five excavation zones totaled 144.31 tons.

Based on the information presented above, WSP believes that soil remediation at the site is complete. Groundwater Natural Attenuation Monitoring has been performed at the site since September 2008.

PFAS Screening

In June 2023, WSP collected samples from five monitoring wells (MW001R2, MW002, MW028, MW041, and MW042) for analysis of PFAS. Laboratory analytical results exceeded the DEP Provisional Groundwater Cleanup Target Level (PGCTL) of 70 nanograms per liter (ng/L) for perfluorooctanesulfonic acid (PFOS) and the sum of perfluoro-n-octanoic acid (PFOA) and PFOS, at shallow zone monitoring wells MW001R2 and MW002 and intermediate zone monitoring well MW028.

ANNUAL GROUNDWATER MONITORING EVENT

WSP mobilized to the site on June 24-27, 2024, to complete the annual groundwater monitoring event and expanded PFAS monitoring event. Once on-site, field staff began identifying monitoring wells using the figures from the 2023 Annual Groundwater Monitoring Report as reference. WSP field staff identified several discrepancies between the locations of monitoring wells as observed on-site, and as presented in the 2023 Annual Groundwater Monitoring Report figures. These discrepancies included differences in the precise location of monitoring wells and the associated aquifer zone as symbolized on the figures. Despite these discrepancies, WSP was able to accurately identify monitoring wells as required to perform the groundwater monitoring event. Additionally, WSP observed that road construction activities along the shoulder of West Atlantic Boulevard, and North Dixie Highway, had encroached into the vicinity of several monitoring wells onsite. Based on observations in the field, WSP has assumed that monitoring wells MW010, MW014, MW033, MW034, and MW040 were destroyed by the road construction activities. WSP observed evidence of the destruction of monitoring wells, including fragments of concrete well pads, steel manholes, and manhole covers among the construction debris. Additionally, monitoring well MW004, which is located in the north-central portion of the site, could not be located in field. Finally, WSP observed an unknown monitoring well (UNKMW001) located between MW025 and MW040. A summary of well construction and well status is presented in Table 1.

Groundwater Elevations

On June 24, 2024, the depth to groundwater was measured prior to groundwater sampling, at accessible monitoring well locations relative to the top of the well casings, using an electronic water level indicator. The depth to

groundwater measurements and calculated groundwater elevations are summarized in Table 2. The potentiometric contour maps for the shallow zone (0 to 20 feet bgs), the intermediate zone (21 to 60 feet bgs), of the surficial aquifer are shown on Figure 4 and Figure 5, respectively. The potentiometric contour map for the deep zone of the surficial aquifer (60 to 100 feet bgs) was not included due to only one deep zone monitoring well (MW020) being located on-site. Based on the June 25, 2024, groundwater elevation data, the general groundwater flow direction in the shallow and intermediate zones of the surficial aquifer is to the southwest. The groundwater flow direction at the site has been variable based on recent data. The CAR dated 1998, as well as the Annual Groundwater Monitoring Reports dated 2013 and 2015, reported groundwater flow direction to be to the southeast. In 2017 and 2018, the groundwater flow direction in the shallow zone was reported to be to the east, and in the intermediate zone was reported to be southeast in the northwest corner of the site and west-northwest in the southeast corner of the site. The general groundwater flow direction indicated from the June 25, 2024, groundwater elevation data is generally inconsistent with groundwater flow conditions reported during previous investigations for the shallow zone and variable in the intermediate zone.

Groundwater Sampling

Groundwater samples were collected from ten shallow zone monitoring wells (MW001R2, MW002, MW005, MW006, MW007, MW008, MW025, MW036, MW041, and MW042) and four intermediate zone monitoring wells (MW011, MW012, MW028, and UNKMW001), on June 25-26, 2024. Monitoring wells MW010, MW014, MW033, MW034, and MW040 were initially proposed for groundwater sample collection and analysis for PFAS using DEP Standard Operating Procedures (SOP): LC-001-3, however, these wells could not be located and are assumed to have been destroyed by road construction activities. Groundwater samples were collected from the wells in accordance with DEP SOPs for Field Activities (DEP-SOP-001/01) dated January 2017 (effective April 16, 2018) and DEP SOPs for Sampling with an Analysis of PFAS, dated August 2020. A summary is provided below:

Sample ID	Chlorinated VOCs (EPA Method 8260D)	PFAS (DEP SOP: LC-001-3)	Comment

Investigative Derived Waste (IDW)	Total VOCs	X	

Before collecting the groundwater samples, each well was purged and field parameters including temperature, pH, specific conductance, dissolved oxygen (DO), turbidity, and oxidation-reduction potential were monitored. Purge volumes and field parameters were recorded on field data sheets, and the field monitoring equipment was calibrated in accordance with the manufacturer's recommended procedures and presented in Attachment A. Groundwater samples were collected using a peristaltic pump and disposable silicon and high-density polyethene tubing. New nitrile gloves were used by the sampling personnel for each sample.

Each sample was labeled with a unique identification number attached to the outside of the sample container, and the samples were placed into a laboratory-provided cooler and preserved on ice at a maximum temperature of 4 degrees Celsius. The groundwater samples to be analyzed for chlorinated VOCs analysis using Environmental Protection Agency (EPA) Method 8260D were relinquished with chain-of-custody documentation to Advanced Environmental Laboratories, Inc., a Florida Department of Health, and National Environmental Laboratory Accreditation Program-certified laboratory. The groundwater samples analyzed for PFAS using DEP LC-001-3 were relinquished with chain-of-custody documentation to the DEP Central Laboratory.

The investigation-derived waste (IDW) purge water generated from the groundwater sampling event was stored on site in one 55-gallon steel drum. A waste characterization sample was collected from the IDW drum for analysis of total VOCs using EPA Method 8260D and PFAS using DEP LC-001-3. The waste characterization sample result was determined to be non-hazardous, and the disposal subcontractor Erwin Remediation picked up the IDW drum on July 10, 2024, and transported it to their waste transfer station located at 408 Ditmar Street, Pensacola Florida on July 11, 2024, for proper disposal. The non-hazardous waste manifest is provided in Attachment B.

GROUNDWATER ANALYTICAL RESULTS

Chlorinated VOC Results

During the June 2024, sampling event, vinyl chloride was detected at a concentration above the groundwater cleanup target level (GCTL) of 1 µg/L in the samples collected from shallow zone monitoring wells MW001R2, MW007, and MW042 (43 µg/L, 2.1 µg/L, and 18 µg/L, respectively). Vinyl chloride was also detected at a concentration above the GCTL of 1 µg/L in the sample collected from intermediate zone monitoring well MW028 (26 µg/L). No other chlorinated VOCs were reported at concentrations above GCTLs at the remaining monitoring wells sampled. The vinyl chloride concentrations were generally consistent with previous sampling events; however, the vinyl chloride concentrations were observed to increase in shallow monitoring well MW042 and intermediate monitoring well MW028. Although below the GCTL of 70 µg/L, cis-1,2-DCE was also detected in the samples collected from these wells. The cis-1,2-DCE concentrations were below laboratory method detection limits during the previous sampling event.

The June 2024 groundwater analytical results and the historical groundwater analytical results for chlorinated VOCs at the site are summarized in Table 3. Groundwater chlorinated VOC concentrations in the shallow zone of the surficial aquifer are shown on Figure 6; groundwater chlorinated VOC concentrations in the intermediate zone of the surficial aquifer are shown on Figure 7; and groundwater chlorinated VOC concentrations in the deep zone of the surficial aquifer are shown on Figure 8. The laboratory analytical report and chain-of-custody documentation for the groundwater sampling event are included in Attachment C.

PFAS Results

WSP completed expanded PFAS monitoring at the site concurrently with the chlorinated VOC sampling event. The results indicated that PFOS and the sum of PFOA and PFOS concentrations exceeded the PGCTL of 70 ng/L in groundwater samples collected from monitoring wells MW001R2, MW002, MW007, MW008, MW028, and MW042. The PFOA, PFOS, and sum of PFOA and PFOS concentrations did not exceed the PGCTL in the samples collected from the remaining wells sampled. The results were generally consistent with the previous screening results; however, the results at monitoring well MW042 were observed to increase significantly. The sum of PFOA and PFOS concentration at monitoring well MW001R2 was greater than 300 ng/L. Based on the June 2024 groundwater flow direction, monitoring well MW008 appears to be upgradient of the former drycleaning building location.

The June 2024 groundwater analytical results and the historical groundwater analytical results for PFAS at the site are summarized in Table 4. Groundwater analytical results for PFAS at the site are summarized on Figure 9. The laboratory analytical report and chain-of-custody documentation for the groundwater sampling event are included in Attachment C.

Geochemical Analytical Results

The June 2024 and historical natural attenuation parameters are summarized in Table 5.

The presence of vinyl chloride suggests that microbial reductive dechlorination processes are continuing to occur in the shallow and intermediate zones of the surficial aquifer at the site. The historical geochemical analytical results and field parameter measurements (pH, dissolved oxygen, oxidation-reduction potential, and temperature) demonstrate that the aquifer conditions are anaerobic and continue to be favorable for the reductive dechlorination process.

Quality Assurance/Quality Control

Sampling was completed in accordance with applicable DEP SOPs, project quality assurance goals were met, and the data obtained are reliable for their intended purpose. Preservation and holding time requirements for sample analyses were met. With a few exceptions, the laboratory performed method blank analyses, and accuracy and precision values were generally met.

- MSVj/10032 - 8260D Analysis, Water - The Continuing Calibration Verification standards were below the method acceptance of 80-120% for Dichlorodifluoromethane and Bromomethane. However, a Method Reporting Limit (MRL) standard was run at the end of the analytical sequence. Since the analytes in question were detected in the MRL standard, instrument sensitivity was documented. As the analytes in question were not detected in the field samples, the results are deemed acceptable.
- MSVj/10032 - 8260D Analysis, Water - The relative percent difference for 2-Chloroethyl Vinyl Ether between the Laboratory Control Sample (LCS) and the Laboratory Control Sample Duplicate (LCSD) was outside control criteria due to relatively higher spike recovery in 5371300LCS in comparison with 371301LCSD. Spike recoveries in the LCS and LCSD were within acceptable limits, indicating the analytical batch was in control. No further corrective action was required.

CONCLUSIONS AND RECOMMENDATIONS

On June 25-26, 2024, WSP collected groundwater samples from ten shallow zone monitoring wells (MW001R2, MW002, MW005, MW006, MW007, MW008, MW025, MW036, MW041, and MW042) and four intermediate zone monitoring wells (MW011, MW012, MW028, and UNKMW001). WSP completed expanded PFAS monitoring at the site concurrently with the chlorinated VOC sampling event. Monitoring wells MW010, MW014, MW033, MW034, and MW040 were initially proposed for groundwater sample collection and analysis for PFAS using DEP SOP: LC-001-3, however, these wells could not be located and are assumed to have been destroyed by recent road construction activities.

Vinyl chloride was detected at a concentration above the GCTL of 1 µg/L in the samples collected from shallow zone monitoring wells MW001R2, MW007, and MW042 (43 µg/L, 2.1 µg/L, and 18 µg/L, respectively). Vinyl chloride was also detected at a concentration above the GCTL of 1 µg/L in the sample collected from intermediate zone monitoring well MW028 (26 µg/L). No other chlorinated VOCs were reported at concentrations above GCTLs at the remaining monitoring wells sampled. The vinyl chloride concentrations were generally consistent with previous sampling events; however, the vinyl chloride concentrations were observed to increase in shallow monitoring well MW042 and intermediate monitoring well MW028. Although below the GCTL of 70 µg/L, cis-1,2-DCE was also detected in the samples collected from these wells. The cis-1,2-DCE concentrations were below laboratory method detection limits during the previous sampling event.

The presence of vinyl chloride suggests that microbial reductive dechlorination processes are continuing to occur in the shallow and intermediate zones of the surficial aquifer at the site. The historical geochemical analytical results and field parameter measurements (pH, dissolved oxygen, oxidation-reduction potential, and temperature) demonstrate that the aquifer conditions are anaerobic and continue to be favorable for the reductive dechlorination process.

The PFAS results indicated that PFOS and the sum of PFOA and PFOS concentrations exceeded the PGCTL of 70 ng/L in groundwater samples collected from monitoring wells MW001R2, MW002, MW007, MW008, MW028, and MW042. The PFOA, PFOS, and sum of PFOA and PFOS concentrations did not exceed the PGCTL in the

samples collected from the remaining wells sampled. The results were generally consistent with the previous screening results; however, the results at monitoring well MW042 were observed to increase significantly. The sum of PFOA and PFOS concentration at monitoring well MW001R2 was greater than 300 ng/L. Based on the June 2024 groundwater flow direction, monitoring well MW008 appears to be upgradient of the former drycleaning building location.

Based on the well inventory completed during the June 2024 groundwater monitoring event (see Table 1), WSP observed that many key historical monitoring wells have been destroyed or are no longer able to be located. In order to fill data gaps associated with the chlorinated VOC plume, WSP recommends installing replacement monitoring wells for MW003, MW009, MW014, MW026, and MW033.

WSP recommends continued annual groundwater monitoring for chlorinated VOCs at the site. In addition, based on the September 2024 DEP guidance for PFAS sampling at DSCP sites, WSP also recommends expanded PFAS monitoring at the site (sum of PFOA and PFOS concentration greater than 300 ng/L at MW001R2). WSP proposes collecting groundwater samples from the following monitoring wells at the site in June 2025:

Sample ID	Chlorinated VOCs (EPA Method 8260B)	PFAS (DEP SOP: LC-001-3)	Comment

Notes:

µg/L - micrograms per liter

ft bgs - feet below ground surface

FAC - Florida Administrative Code

PCE - tetrachloroethene

TCE - trichloroethene

DCE - dichloroethene

GCTL - Groundwater Cleanup Target Level per Chapter 62-777, Table 1, FAC.

NADC - Natural Attenuation Default Concentration per Chapter 62-777, Table 1, FAC.

Bold font indicates the constituent concentration was report above the corresponding GCTL.

Highlighted cell indicates the constituent concentration was reported above the corresponding NADC.

U - Constituent was analyzed for but not detected. The reported value is the method detection limit for the constituent analyzed.

I - The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

* Results determined not to exceed the GCTL based on the FDEP memorandum “Rounding Analytical Data for Site Rehabilitation Completion”, dated November 17, 2011.

UNKMW001	6/26/2024	7.07	27.7	445	0.84	7.68	189.9

Notes:
mg/L - milligrams per liter
DO - Dissolved oxygen
ORP - Oxidation/reduction potential
NA - Not analyzed
J - Indicates that the calibration result was outside of the acceptable criteria for standard range.
°C - degrees Celsius
µmhos - micromhos
NTUs - Nephelometric Turbidity Units
mV - millivolts

PROVISIONAL GROUND WATER CLEANUP TARGET LEVEL (GCTL)	PFOA IN ng/L	PFOS IN ng/L	SUM OF PFOA + PFOS IN ng/L
GCTL	70	70	70

NOTE(S)

1. PROVISIONAL GCTL - FDEP PROVISIONAL GROUNDWATER CLEANUP TARGET LEVEL.
2. ALL RESULTS ARE REPORTED IN NANOGRAMS PER LITER (ng/L).
3. BOLD FONTS INDICATES CONSTITUENT CONCENTRATION WAS REPORTED ABOVE THE LABORATORY METHOD DETECTION LIMIT.
4. HIGHLIGHTED FONT INDICATES CONSTITUENT CONCENTRATION WAS REPORTED ABOVE THE PROVISIONAL GROUNDWATER CLEANUP LEVEL.
5. I- REPORTED VALUE IS BETWEEN THE LABORATORY METHOD DETECTION LIMIT AND LABORATORY PRACTICAL QUANTITATION LIMIT.
6. U - THE COMPOUND WAS ANALYZED FOR, BUT NOT DETECTED. THE REPORTED VALUE IS THE METHOD DETECTION LIMIT FOR THE SAMPLE ANALYZED.
7. PFOA - PERFLUORO-N-OCTANOIC ACID.
8. PFOS - PERFLUOROOCTANESULFONIC ACID.

REFERENCE(S)

1. AERIAL IMAGE TAKEN FROM FDEP BUREAU OF SURVEY AND MAPPING (LAND BOUNDARY INFORMATION SYSTEM), PUBLISHED MARCH 2021.
2. WELL LOCATIONS SOURCE: AECOM, DATED MARCH, 2021.
3. PROPERTY BOUNDARY TAKEN FROM FLORIDA DEPARTMENT OF REVENUE.

Field Documentation

Lisa Kamikazi, Jonathan Whipple, WSP
Hanners Cleaners . ERIC_4221
PN: 31404452.4221.DC034A 6/28/24

0730: arrive at office. load truck with equipment.

0855: Depart to site.

1405: Arrive onsite. Review HASP, scope of work and PFAs checklist.

1415: Begin opening wells for DTW readings. see page 1

1425: DTW collection completed. Wells MW010, MW034, MW040, MW033 and MW014 thouroughly looked for but not found. Wells appear to be destroyed by construction. *PM notified.

1730: Depart site for Hotel

1755: Arrive at hotel. End of Day

6/25/24
Weather: 70's to High 80's . Some Rain

0705: Depart Hotel for site

0720: Arrive onsite. Review HASP, scope of work, and daily PFAs checklist.

0740: Begin surveying wells MW041 and MW042

0832: Surveying completed. Begin Prepping for GW sampling and calibrate equipment.

0922: MW025 is now being sampled for PFAs. Metal well casing ~~loose~~ loose (LK), well cap was off and there was some dirt in the well. MW025 DTW was collected 6/25/24 and no rain events happened between that.

0928: UNKMW001 is located between MW025 and MW040. Northwest of MW040 and Southeast of MW025. Refer to figure 1. UNKMW001 is a 2" diameter well, 30' deep. The screen interval is unknown so a well volume will be purged.

1000: Begin GW sampling. See GW sampling logs

1203: MW004 suspected to be a VMP after tagging bottom of well. Tagged at 5ft which is consistent with VMP's onsite. Crew proceeded to search for well (MW004) for 1/2 hour.

1210: Rain

1225: Rain Paused

1440: Light drizzle.

1530: Rain Stopped.

1540: EQB-1 collected

1550: GW sampling done for the day. Depart site for hotel.

1605: Arrive at hotel. End of day

Lisa Kamikazi, Jonathan Whipple, WSP 6/26/24
Hanners Cleaners. ERIC_4221
PN: 31404452. 4221. DC034A Weather: 70°F to High 80°F, Sunny. Cloudy

0700: Depart hotel for site.

0720: Arrive on site. Review HASP, scope of work and PFAs checklist. Calibrate equipment.

0800: Begin GW sampling. See GW sampling logs.

1237: Well cap for mw036 replaced

1253: Well UNKmw001 suspected to have 15 feet of screen, due to tubing being caught at 15ft. Well volume purged.

1415: GW sampling completed. Perform final calibration.

1435: Calibration completed. 55 gallon Drum is half full, left on southside of the buiding against palm tree per property owner request.

1445: Offsite

1525: Arrive at hotel. Done for the day

L.K, Jw /WSP ERIC-4221 Hanners cleaners 6/26/24
PN: 31404452.4221.DE034A

0710: Depart hotel. Head to Jacksonville, FL office.

1220: Arrive at AEL to drop off samples

1310: Arrive at office. Pack PFAs samples for shipment

1425: Relinquish PFAs samples at FedEx

1435: Return to office. Unload truck, upload documents from field event.

1510: End of day

					10 mV			Init Cont Final	

Acceptable calibration check is if the meter reads within +/- 0.3 mg/L of the value of appropriate calibration standard. Need to record DO readings in mg/L and use Table FS 2200-2 "Dissolved Oxygen Saturation". ORP calibration reading must be within +/- 10 mV from the theoretical redox standard value at that temperature.

Daily PFAS Sampling Checklist

Date: 6/24/24

Site Name: Hanner's Cleaners

Weather (*temperature/precipitation*): 78°-89°F, cloudy

Please check all boxes that apply and describe any exceptions in the notes section below along with QA/QC methods used to assess potential sample cross-contamination as a result.

Field Clothing and PPE:

- [x] No water- or stain-resistant clothing (e.g., GORE-TEX®)
- [x] During collection of water and sediment samples, no water- or stain-resistant boots OR water- or stain-resistant boots covered by PFAS-free over-boots
- [x] Field boots (or over-boots) are made of polyurethane, PVC, rubber, or untreated leather
- [x] Waders or rain gear are made of polyurethane, PVC, vinyl, wax-coated or rubber
- [x] Clothing has not been recently laundered with a fabric softener
- [x] No coated HDPE suits (e.g., coated Tyvek® suits)
- [x] Field crew has not used cosmetics, moisturizers, or other related products today
- [x] Field crew has not used sunscreen or insect repellants today, other than products approved as PFAS-free

Field Equipment:

- [x] Sample containers and equipment in direct contact with the sample are made of HDPE, polypropylene, silicone, acetate or stainless steel, not LDPE or glass
- [x] Sample caps are made of HDPE or polypropylene and are not lined with Teflon™
- [x] No materials containing Teflon™, Viton™, or fluoropolymers
- [x] No materials containing LDPE in direct contact with the sample (e.g., LDPE tubing, Ziploc® bags)
- [x] No plastic clipboards, binders, or spiral hard cover notebooks
- [x] No waterproof field books
- [x] No waterproof or felt pens or markers (e.g., certain Sharpie® products)
- [x] No chemical (blue) ice, unless it is contained in a sealed bag
- [x] No aluminum foil
- [x] No sticky notes (e.g., certain Post-It® products)

Decontamination:

- [x] Reusable field equipment (e.g., inner drill rods, samplers) decontaminated prior to reuse
- [x] "PFAS-free" water is on-site for decontamination of field equipment
- [x] Alconox® or Liquinox® used as decontamination detergent

Daily PFAS Sampling Checklist

Date: 6/25/24

Site Name: Hanners Cleaners

Weather (*temperature/precipitation*): _____

Please check all boxes that apply and describe any exceptions in the notes section below along with QA/QC methods used to assess potential sample cross-contamination as a result.

Field Clothing and PPE:

- ☑ No water- or stain-resistant clothing (e.g., GORE-TEX®)
- ☑ During collection of water and sediment samples, no water- or stain-resistant boots OR water- or stain-resistant boots covered by PFAS-free over-boots
- ☑ Field boots (or over-boots) are made of polyurethane, PVC, rubber, or untreated leather
- ☑ Waders or rain gear are made of polyurethane, PVC, vinyl, wax-coated or rubber
- ☑ Clothing has not been recently laundered with a fabric softener
- ☑ No coated HDPE suits (e.g., coated Tyvek® suits)
- ☑ Field crew has not used cosmetics, moisturizers, or other related products today
- ☑ Field crew has not used sunscreen or insect repellants today, other than products approved as PFAS-free

Field Equipment:

- ☑ Sample containers and equipment in direct contact with the sample are made of HDPE, polypropylene, silicone, acetate or stainless steel, not LDPE or glass
- ☑ Sample caps are made of HDPE or polypropylene and are not lined with Teflon™
- ☑ No materials containing Teflon™, Viton™, or fluoropolymers
- ☑ No materials containing LDPE in direct contact with the sample (e.g., LDPE tubing, Ziploc® bags)
- ☑ No plastic clipboards, binders, or spiral hard cover notebooks
- ☑ No waterproof field books
- ☑ No waterproof or felt pens or markers (e.g., certain Sharpie® products)
- ☑ No chemical (blue) ice, unless it is contained in a sealed bag
- ☑ No aluminum foil
- ☑ No sticky notes (e.g., certain Post-It® products)

Decontamination:

- ☑ Reusable field equipment (e.g., inner drill rods, samplers) decontaminated prior to reuse
- ☑ "PFAS-free" water is on-site for decontamination of field equipment
- ☑ Alconox® or Liquinox® used as decontamination detergent

Daily PFAS Sampling Checklist

Date: 6/26/24

Site Name: Hanner's Cleaners

Weather (*temperature/precipitation*): 77°-88°, mostly sunny

Please check all boxes that apply and describe any exceptions in the notes section below along with QA/QC methods used to assess potential sample cross-contamination as a result.

Field Clothing and PPE:

- ✓ No water- or stain-resistant clothing (e.g., GORE-TEX®)
- ✓ During collection of water and sediment samples, no water- or stain-resistant boots OR water- or stain-resistant boots covered by PFAS-free over-boots
- ✓ Field boots (or over-boots) are made of polyurethane, PVC, rubber, or untreated leather
- ✓ Waders or rain gear are made of polyurethane, PVC, vinyl, wax-coated or rubber
- ✓ Clothing has not been recently laundered with a fabric softener
- ✓ No coated HDPE suits (e.g., coated Tyvek® suits)
- ✓ Field crew has not used cosmetics, moisturizers, or other related products today
- ✓ Field crew has not used sunscreen or insect repellants today, other than products approved as PFAS-free

Field Equipment:

- ✓ Sample containers and equipment in direct contact with the sample are made of HDPE, polypropylene, silicone, acetate or stainless steel, not LDPE or glass
- ✓ Sample caps are made of HDPE or polypropylene and are not lined with Teflon™
- ✓ No materials containing Teflon™, Viton™, or fluoropolymers
- ✓ No materials containing LDPE in direct contact with the sample (e.g., LDPE tubing, Ziploc® bags)
- ✓ No plastic clipboards, binders, or spiral hard cover notebooks
- ✓ No waterproof field books
- ✓ No waterproof or felt pens or markers (e.g., certain Sharpie® products)
- ✓ No chemical (blue) ice, unless it is contained in a sealed bag
- ✓ No aluminum foil
- ✓ No sticky notes (e.g., certain Post-It® products)

Decontamination:

- ✓ Reusable field equipment (e.g., inner drill rods, samplers) decontaminated prior to reuse
- ✓ "PFAS-free" water is on-site for decontamination of field equipment
- ✓ Alconox® or Liquinox® used as decontamination detergent

RE: Workorder: J2409391 Hanners Cleaners

Dear Stephen Sider:

Enclosed are the analytical results for sample(s) received by the laboratory on Thursday June 27, 2024. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jerry Allen, Client Services Manager
JAllen@aellab.com

FINAL - REVISION

Workorder: Hanners Cleaners (J2409391)

Workorder Summary

Batch Comments

MSVj/10032 - 8260D Analysis,Water

The Continuing Calibration Verification (CCV) standards were below the method acceptance of 80-120% for Dichlorodifluoromethane and Bromomethane. However, a Method Reporting Limit (MRL) standard was run at the end of the analytical sequence. Since the analytes in question were detected in the MRL standard, instrument sensitivity was documented. As the analytes in question were not detected in the field samples, the results are deemed acceptable.

The relative percent difference (RPD) for 2-Chloroethyl Vinyl Ether between the Laboratory Control Sample (LCS) and the Laboratory Control Sample Duplicate (LCSD) was outside control criteria due to relatively higher spike recovery in 5371300LCS in comparison with 5371301LCSD. Spike recoveries in the LCS and LCSD were within acceptable limits, indicating the analytical batch was in control. No further corrective action was required.

Case Narrative

Unless otherwise noted, all samples included in this report were received in accordance with protocols referenced in Chapter 62-160, Florida Administrative Code (F.A.C.). Results published in this report pertain only to the samples as submitted to, and received by the laboratory. All times in this report are adjusted to the applicable Eastern Time Zone (EST or EDT).

Results for the following analytical group are included in this report: Pesticides.

Scientific notation may be used in reporting very large or small values. Values reported using scientific notation will take the form of the following example: 1.3E+03, which is equivalent to 1.3×10^3 or 1300.

Unless otherwise noted, analytical values for soil and sediment samples are reported on a dry weight basis, and analytical values for waste and tissue samples are reported on a wet weight basis.

Results for TNI accredited tests met requirements established by The NELAC Institute. A double asterisk (**) is used to indicate an analyte/matrix/method for which the laboratory is not TNI accredited by the Florida Department of Health Environmental Laboratory Certification Program or where accreditation for that field of testing is not applicable.

Any significant anomalies or deviations from established protocols are documented in Non-Conformance Reports, which, where appropriate, are included within this analytical report. Additional comments related to specific analytical tests may be included as remarks following the analytical results for each sample. Such comments and remarks are for informational purposes only and are not intended to convey judgement about the usability of the reported data.

A quality control report on the performance of the test method for the submitted samples is included. Uncertainty associated with the analytical results contained in this report can be estimated from the reported quality assurance results and from published quality control acceptance limits for each analytical test. Matrix quality control results (matrix spike recoveries and matrix sample precision) pertain only to the matrix sample tested and do not necessarily reflect test method performance for other samples.

Typical matrix quality control (QC) measurements may include matrix spike recovery, matrix spike duplicate recovery, matrix spike precision and matrix sample precision. Not all matrix QC results may be available or reportable; where they are not an explanation is provided. Typical reasons for unavailable QC results include, but are not limited to, a) insufficient matrix sample to perform some or all QC measurements; b) analyte concentration in the sample replicated was too low for a meaningful measurement of precision and c) analyte concentration in the matrix sample spiked was too high (relative to the amount of analyte spiked) for a meaningful measurement of recovery. Where matrix QC results are unavailable, other method performance metrics (e.g., LCS recovery, LCS precision, surrogate recovery) may be used to assess performance of the method. Comments explaining any missing QC measurements are not intended to convey any adverse conclusions about the quality of the reported data.

Precision is reported as relative percent difference unless otherwise noted.

Quality Control codes as defined below may be used in this report to indicate results that are associated with one or more quality control elements which did not fall within established test method criteria. Such results may be qualified as estimates using a J qualifier as required by 62-160 F.A.C. Explanations are included in the report for any results that were reported as estimates for other reasons.

QC Codes used in this report may include:

- LCS – Recovery for the batch Laboratory Control Sample (LCS) was outside existing control limits;
- MS – Recovery for the batch matrix spike (MS) was outside existing control limits;
- CCV – Recovery for a continuing calibration verification (CCV) standard was outside existing control limits;
- SUR – Recovery of a surrogate (SUR) for associated analytes was outside existing control limits;
- RPD – The precision, measured as relative percent difference (RPD), of batch replicate measurements was outside existing control limits;
- RSD – The precision, measured as relative standard deviation (RSD), of batch replicate measurements was outside existing control limits;
- SMP – Sample - used precision derived from replicate analyses of a sample;

The following data qualifiers are used, where applicable, in this report as specified in 62-160 F.A.C.

- A - Value reported is the mean of two or more determinations.
- B - Results based on colony counts outside the acceptable range.
- I - The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- J - Estimated value and/or the analysis did not meet established quality control criteria.
- K - Actual value is known to be less than value given.
- L - Actual value is known to be greater than value given.
- N - Presumptive evidence of presence of material.
- O - Sampled, but analysis lost or not performed.
- Q - Sample held beyond normal holding time.
- T - Value reported is less than the criterion of detection.
- U - Material was analyzed for but not detected. The reported value is the method detection limit for the sample analyzed.
- V - Analyte was detected in both sample and method blank.
- X - Too few individuals to calculate SCI value.
- Y - The laboratory analysis was from an unpreserved or improperly preserved sample. The data may not be accurate.
- Z - Colonies were too numerous to count (TNTC).

Quality control information from overflow laboratories may not be included in this report. Please refer to the associated report from the overflow laboratory for additional information.

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

Mr. Ben Saxton
111 S Scott Street
Melbourne, FL 32901

Subject: Site Rehabilitation Completion Order
Hanner's Quality Cleaners
209 West Atlantic Boulevard
Pompano Beach, Broward County
FDEP Facility ID# 069063877
Discharge Date: July 2, 1990 (ATRP)
Discharge Score: 61

Dear Mr. Saxton:

The Bureau of Petroleum Storage Systems has reviewed the Post Active Remediation Quarterly Monitoring Report (PARM) and No Further Action Proposal (NFAP) dated November 22, 2004 (received November 29, 2004), prepared and submitted by Metcalf and Eddy for the petroleum product discharge discovered at this site. Documentation submitted with the NFAP confirms that criteria set forth in Rule 62-770.680(1), Florida Administrative Code (F.A.C.), have been met. The NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the site for petroleum product contamination associated with the discharge listed above, except as set forth below. This Order applies only to the petroleum discharge found at the site. The monitoring wells are not being abandoned at this time at the request of the Florida Department of Environmental Protection, Dry-cleaning Solvent Cleanup Program.

In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the site, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the NFAP or otherwise allowed by Chapter 62-770, F.A.C.

Legal Issues

The Department's Order shall become final unless a timely petition for an administrative proceeding (hearing) is filed under Sections 120.569 and 120.57, Florida Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for a hearing are set forth below.

Persons affected by this Order have the following options:

(A) If you choose to accept the Department's decision regarding the NFAP you do not have to do anything. This Order is final and effective as of the date on the top of the first page of this Order.

(B) If you choose to challenge the decision, you may do the following:

(1) File a request for an extension of time to file a petition for hearing with the Agency Clerk in the Office of General Counsel of the Department within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for hearing; or

(2) File a petition for administrative hearing with the Agency Clerk in the Office of General Counsel of the Department within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for Administrative Hearing

For good cause shown, pursuant to Rule 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for hearing. Such a request must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Mr. Ben Saxton, shall mail a copy of the request to Mr. Ben Saxton at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for administrative hearing must be made.

How to File a Petition for Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900

Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Mr. Ben Saxton, shall mail a copy of the petition to Mr. Ben Saxton at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsections 120.54(5)(b)4. and 120.569(2), F.S., and Rule 28-106.201, F.A.C., a petition for administrative hearing shall contain the following information:

(a) The name, address, and telephone number of each petitioner, the name, address, and telephone number of the petitioner's representative, if any, the site owner's name and address, if different from the petitioner, the FDEP facility number, and the name and address of the facility;
(b) A statement of when and how each petitioner received notice of the Department's action or proposed action;
(c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;
(d) A statement of the material facts disputed by the petitioner, or a statement that there are no disputed facts;
(e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;
(f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
(g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective as of the date on the top of the first page of this Order. Timely filing a petition for administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable

filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the clerk of the Department (see below).

Questions

Any questions regarding the Department's review of your NFAP should be directed to Michelle C. Roberts at (850) 245-8893. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for administrative hearing or request for an extension of time to file a petition for administrative hearing.

The FDEP Facility Number for this site is 069063877. Please use this identification on all future correspondence with the Department.

Sincerely,

Michael E. Ashey, Chief
Bureau of Petroleum Storage Systems

March 15, 1989

Mr. E. K. White
Star Enterprise
Post Office Box 5140
Maitland, Florida 32751-8003

Dear Mr. White:

On December 27, 1989, the Department received a "no further action" proposal for the petroleum contamination site Texaco #021-270-Smales', located at 101 East Atlantic Boulevard, Pompano Beach, Florida. Documentation submitted with this proposal confirms that criteria set forth in section 17-70.008(5), Florida Administrative Code (F.A.C.) have been met. The "no further action" proposal is hereby incorporated by reference in this Order. Therefore, you are released from any further obligation to conduct site rehabilitation at the above-referenced site, except as set forth below.

In the event contaminant concentrations increase significantly from the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the site, the Department may require site rehabilitation in order to reduce contaminant concentrations to the levels approved through review of the "no further action" proposal, or otherwise allowed by Chapter 17-70, F.A.C.

Persons whose substantial interests are affected by this Site Rehabilitation Completion Order have a right, pursuant to section 120.57, Florida Statutes, to petition for an administrative determination (hearing). The Petition must conform to the requirements of Chapters 17-103 and 28-5, F.A.C., and must be filed (received) with the Department's Office of General Counsel, 2600 Blair Stone Road, Tallahassee, Florida 32399-2400, within twenty-one (21) days of receipt of this notice. Failure to file a petition within twenty-one (21) days constitutes a waiver of any right such persons have to an administrative determination (hearing) pursuant to section 120.57, Florida Statutes.

This Site Rehabilitation Completion Order is final and effective on the date of receipt of this Order unless a petition is filed in accordance with the preceding paragraph. Upon the timely filing of a petition, this Order will not be effective until further order of the Department.

RE: Environmental Assessment Report (EAR)
Texaco Location # 021-1308(085)
101 E. Atlantic Blvd.
Pompano Beach, Florida
FDER Facility # 068502776

Dear Ms. Dugan:

Please find enclosed the Environmental Assessment Report (EAR) for this location. This report was prepared by 17-70 guidelines in response to laboratory reports from water samples taken in July and December 1987. These were recently resubmitted with our request for approval under the Reimbursement Program.

We now request your review and approval of the enclosed EAR and the consultant's recommendation for No Further Action. Should you have any questions, please call me at (407) 660-8000 or Allen Register at (305) 462-0460.

Yours very truly,
TEXACO REFINING AND MARKETING INC.

This structure is a reinforced concrete, gated spillway with discharge controlled by two stem operated, vertical lift gates. Operation of the gates is automatically controlled so that the gate operating system opens or closes the gates in accordance with the operational criteria. The structure is located on the Old Pompano Canal just east of Cypress Road.

PURPOSE

This structure maintains upstream water control stages in Old Pompano Canal. It passes the design flood without exceeding the upstream flood design stage, and restricts downstream flood stages and channel velocities to non-damaging levels; and it prevents saline intrusion.

OPERATING CRITERIA

This structure is operated to maintain an optimum water surface of 4.5 feet insofar as possible. The automatic operations are actuated by the headwater elevation as follows:

When the headwater elevation rises to 4.8 feet, the gates begin to open at 6 inches per minute; the amount of opening is described below.

When the headwater elevation rises or falls to elevation 4.6, the gates become stationary.

When the headwater elevation falls to 4.3, the gates begin to close.

In addition to maintaining optimum upstream fresh water control, as described above, the automatic controls on this structure have an overriding control which closes the gates, regardless of the upstream water level in the event of a high floodtide, whenever the differential between the head and the tailwater pool elevation reaches 0.2 feet.

FLOOD DISCHARGE CHARACTERISTICS

	Design
Discharge Rate	375 cfs
Headwater Elevation	5.0 feet
Tailwater Elevation	4.5 feet
Type Discharge	submerged controlled

DESCRIPTION OF STRUCTURE

Type Fixed crest, reinforced concrete gated spillway

Weir Crest

Net Length 28 feet

Elevation -1.0 feet

Service Bridge Elevation 17 feet

Water level which will bypass structure 9 feet

Gates

Number 2

Size 6 ft. high by 14 ft. wide

Type Vertical lift gates

Control: Automatic, on-site upstream control with override differential water surfacer control sensed by bubbler system and remote computer control.

Bottom elevation of gates, full open 5 feet

Top elevation of gates, full closed 5.0 feet

Lifting mechanism

Normal power source commercial electricity

Emergency power source LP gas driven generator with automatic transfer switch

Type hoist direct drive electric motor, gear connected to gear box and stems

ACCESS: The structure is located adjacent to Atlantic Boulevard.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Site ID: 0405752
EPA Id: FLD030753008

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
POMPANO RADIATOR SER	327 N DIXIE HWY	NW 1/8 - 1/4 (0.209 mi.)	J67	318

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 6 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 18 UST sites within approximately 0.25 miles of the target property.

Fl Sites: This summary status report is a compilation and revision of other existing lists. It was developed from a number of lists including the Eckhardt list, the Moffit list, the EPA Hazardous Waste Sites list, EPA's Emergency and Remedial Response Information System list (RCRA Section 3012), and existing department lists such as the Obsolete Uncontrolled Hazardous Waste Sites list. The purpose of this list is to track the progress of activities within and outside the department as they relate to the listed sites. It is not a list of uncontrolled sites or sources causing environmental contamination. The Sites List comes from the Department of Environmental Protection.

A review of the Fl Sites list, as provided by EDR, and dated 12/31/1989 has revealed that there are 2

Fl Sites sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 6 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

HAZ WASTE: The records in this data set are generated by county SQG Assessment, Notification and Verification Programs on-site surveys (see 403.7225 FS). The waste records are wastes observed during county inspections. Even though this state program targets SQGs and VSQGs for outreach, some counties choose to additionally look at their LQGs.

A review of the HAZ WASTE list, as provided by EDR, and dated 08/13/2024 has revealed that there is 1 HAZ WASTE site within approximately 0.25 miles of the target property.

HW GEN: Small Quantity Hazardous Waste Generators are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities greater than 100 Kg but less than 1,000 Kg in any one calendar month. Large Quantity Generators of Hazardous Waste are tracked in this coverage based on their notification to the Department of Environmental Protection as to their handler status, or based on inspections conducted at their facilities. These facilities are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities equal to or greater than 1,000 Kg in any one calendar month.

A review of the HW GEN list, as provided by EDR, and dated 06/18/2024 has revealed that there is 1 HW GEN site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 11 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and

STAGE AUTO ELECTRIC INC (Continued) **1001231829**

affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.

BP OIL CO #24671 (Continued) **1000703076**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/07/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

Lists of state and tribal brownfield sites

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.
