Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024
Date Data Arrived at EDR: 10/01/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/25/2024

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/07/2024

Next Scheduled EDR Contact: 01/09/2025
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal brownfield sites

BSRA: Brownfield Site Rehabilitation Agreements Listing
The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database
A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

DADE CO LW: Liquid Waste Transporter List
The Liquid Waste Transporter permit regulates the transportation of various types of liquid and solid waste, including hazardous waste, waste oil and oily waste waters, septic and grease trap waste, biomedical waste, spent radiator fluid, photo chemical waste, dry sewage sludge, and other types of non-hazardous industrial waste. The Liquid Waste Transporter permits needed to protect the environment and the public from improperly handled and transported waste.

Date of Government Version: 05/20/2024

DADE MOP: Marine Facilities Operating Permit

What is this permit used for? Miami-Dade County Ordinance 89-104 and Section 24-18 of the Code of Miami-Dade County require the following types of marine facilities to obtain annual operating permits from DERM: All recreational boat docking facilities with ten (10) or more boat slips, moorings, davit spaces, and vessel tie-up spaces. All boat storage facilities contiguous to tidal waters in Miami-Dade County with ten (10) or more dry storage spaces including boatyards and boat manufacturing facilities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/05/2024
Date Data Arrived at EDR: 08/06/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

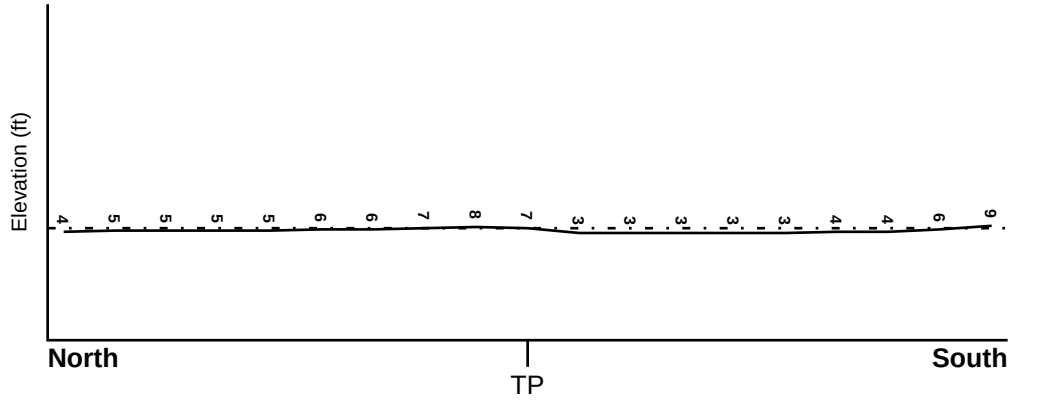
TOPOGRAPHIC INFORMATION

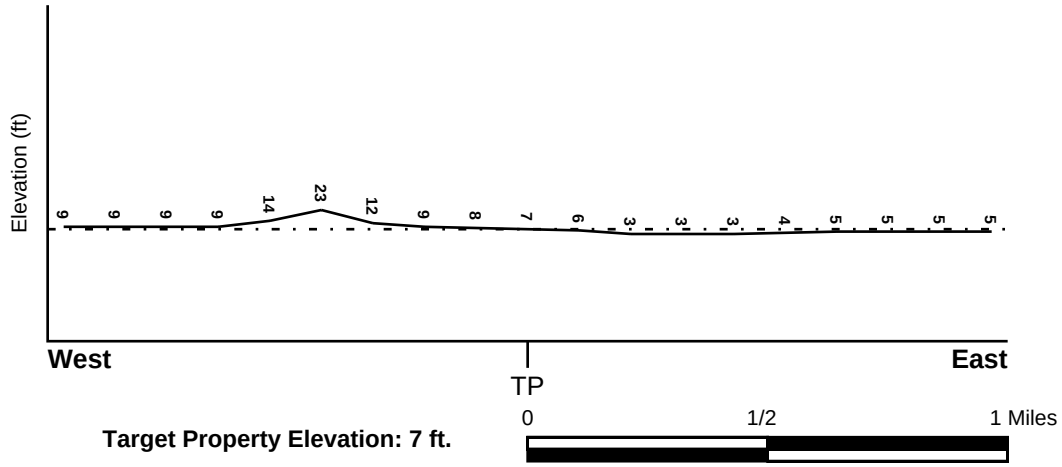
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





0 1/2 1 Miles

Target Property Elevation: 7 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
12011C0364H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
12011C0368H	FEMA FIRM Flood data

FORT LAUDERDALE NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NE
Site Name:	WINGATE ROAD MUNICIPAL INCIN
Site EPA ID Number:	FLD981021470
Groundwater Flow Direction:	GENERALLY ESE IN THE BISCAYNE AQUIFER ON A REGIONAL BASIS. THE FLOW DIRECTION IS INFLUENCED BY WELL WITHDRAWALS AND CANALS.
Measured Depth to Water:	a surface elevation of approximately 1 to 2 feet above sea level
Hydraulic Connection:	The landfill is underlain by approximately 50 feet of sand, and limestone occurs at an approximate depth of 50 feet below sea level. The Biscayne water table aquifer extends to a depth of 200 feet or more beneath the site to a confining layer.
Sole Source Aquifer:	A sole source aquifer is persent at or near the site
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	0 - 1/8 Mile East	SE
12	1/4 - 1/2 Mile West	N
B13	1/2 - 1 Mile East	SW
B14	1/2 - 1 Mile East	S - SE
15	1/2 - 1 Mile WNW	S-SE
20	1/2 - 1 Mile ESE	SW

2G	1/2 - 1 Mile WNW	S-SE
3G	1/4 - 1/2 Mile West	N
4G	1/2 - 1 Mile East	SW
5G	1/2 - 1 Mile East	S - SE
6G	0 - 1/8 Mile East	SE
7G	1/2 - 1 Mile ESE	SW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Margate

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 77 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	7 inches	16 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	16 inches	27 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
4	27 inches	31 inches	gravelly fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
5	31 inches	31 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	5 inches	48 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	48 inches	57 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
4	57 inches	57 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 4

Soil Component Name: Udorthents

Soil Surface Texture: cobbly sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	cobbly sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	29 inches	50 inches	sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	50 inches	50 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 5

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 6

Soil Component Name: Basinger

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	1 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
2	1 inches	18 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
3	18 inches	35 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
4	35 inches	59 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6

Soil Map ID: 7

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
2	5 inches	35 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
3	35 inches	53 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
4	53 inches	72 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6

Soil Map ID: 8

Soil Component Name: Pomello

Soil Surface Texture: fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	42 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5
2	42 inches	64 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5
3	64 inches	79 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Babu Madabhushi, PhD

Years of experience
31 total | 25 with AECOM

Babu has 31 years of experience in conducting and managing environmental engineering projects. His technical expertise is in the areas of conducting contamination assessment, evaluation, water/wastewater treatment, groundwater treatment, remedial system operation and maintenance.

Babu is extremely knowledgeable of FDOT District Four, Florida's Turnpike Enterprise, DERM, FDEP and local regulations and standards. His expertise also encompasses sediment characterization, dredge design, RCRA Facility Investigation, contamination assessment, impact assessment, remedial investigation and feasibility studies, soil and groundwater remediation, in-situ bioremediation, and operation and maintenance of remedial systems.

Professional experience

Contamination Assessment and Remediation Services - BEE68, FDOT District Four (2022 – Present). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Assessment and Remediation Services - BE678, FDOT District Four (2020 – 2022). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Evaluation and Screening -PD&E Studies, FDOT District Six, Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, Miami Gardens to County Line), St. Lucie (SR-80), Martin, and Monroe (US-1) Counties, FL (2003 – 2021). Developed CSER for more than 30 project locations and Re-Evaluation Reports for several FDOT projects in Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, I-95), St. Lucie (SR-80), Martin, and Monroe (US-1) counties.

SR-826/Palmetto Expressway from north of NW 25th St to North of NW 104th St CSER, FDOT District Six, Miami-Dade County, FL (2022 – 2024). Contamination lead for the FDOT PLEMO with environmental assessment support services for the SR-826/Palmetto Expressway CSER. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential.

SR-826/Palmetto Expressway from South of NW 25th St to North of NW 154th St SEIR, FDOT District Six, Miami-Dade County, FL (2020 – 2021). Contamination Lead to provide the FDOT PLEMO with environmental assessment support services for the SR 826 / Palmetto Expressway SEIR. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential**.**

I-95 from South of NW 10th St to North of Hillsboro Boulevard, FDOT District Four, Broward County, FL (2017 – 2021). Contamination Lead for environmental tasks associated with the performance of a PD&E Study. Tasks include Contamination Lead to provide the FDOT PLEMO with environmental assessment support services. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential**.**

Education

PhD, Hazardous Waste Management, West Virginia University, 1997
MS, Wastewater Treatment, Indian Institute of Technology, 1993
BS, Civil Engineering, Kakatiya University, 1988

Expertise

CAR Project Manager
Contamination Assessment
Remedial Design
Remedial Action Implementation
Water/Wastewater Treatment
Groundwater Treatment
Remedial System Operation and Maintenance
Sediment Characterization

Training

40-hr OSHA HAZWOPER
8-hr OSHA HAZWOPER Annual Refresher

Registrations/Certifications

AECOM Certified Project Manager
AECOM Lead Verifier: In Situ Bioremediation

SR-826/Palmetto Expressway from US-1 (SR-5) to SR-836 / Dolphin Expressway, FDOT District Six, Miami-Dade County, FL (2018 – Present). Contamination lead for environmental tasks associated with the performance of an approximate 7-mile PD&E Study**.** Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

I-75 from Miami-Dade County Line to SR-826 (Palmetto Expressway) PD&E Study, FDOT District Six, Miami-Dade County, FL (2007 – Present). Contamination lead for the performance of a PD&E Study. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

Wagner Creek/Seybold Canal Contaminated Sediment Dredging and Disposal (2017 – Present). Managed this critical project in a heavily commercialized area near Jackson Hospital. This included sediment dredge design, permitting, contaminated sediment characterization/handling, sediment stabilization, turbidity control and disposal at out of state landfill. Won multiple awards (from FDEP and other entities) for successfully completing this under budget and within schedule without harming the manatees.

Former Eaker Air Force Base Remediation, U.S. Air Force, Blytheville, AR (2011 – 2021). Project manager for this performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Eaker AFB. The sites are contaminated with petroleum compounds, light non-aqueous phase liquid, chlorinated solvents, and arsenic. Services include remedial investigation, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Miami Dade DERM-14/E20 Contracts, Miami-Dade Aviation Department, Miami International Airport, Opa Locka Airport, Public Housing, Northwest Cargo Area, Miami, FL (2002 – 2021). Managed several projects that included delineation of petroleum, chlorinated solvent, and metals contamination at these properties. Installed several deep nested wells to delineate contamination in various zones of the aquifer. Multiple wells were installed in the vicinity of the runways, in the public right of way, and in the vicinity of residential areas. Currently overseeing the long-term groundwater monitoring activities.

Former Homestead Air Force Base Remediation, US Air Force, Homestead, FL (2011 – 2021). Deputy project manager for a performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Homestead AFB. The sites are contaminated with petroleum compounds, chlorinated solvents, and arsenic. Services include remedial investigation, preparation of Explanation of Significant Differences (ESD) to Record of Decision (ROD) document, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, storage tank removal, remedial design modifications, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Contamination Evaluation Studies, FGT, Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe Counties, FL, (2006 – Present). Contamination Specialist, responsible for developing contamination evaluation reports and Contingency Plans for numerous project locations in Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe counties for projects associated with hydrotesting, pipeline maintenance/repairs and pipeline abandonment work.

Blue Lagoon Post Office Site Assessment, Remediation, and Methane Collection System, US Postal Service, Miami, FL (2003 – Present). Project Manager/Senior Environmental engineer for contamination assessment at a facility constructed over a filled-in canal where lead was found in the soil above state cleanup levels. Work included soil and groundwater remediation activities and methane gas collection system design and monitoring. Currently, AECOM is performing natural attenuation monitoring and methane gas monitoring.

Remediation Engineering, Federal Aviation Administration (FAA), William J. Hughes Technical Center, Atlantic City, NJ (2005 – 2012). Remediation engineering task leader for operation and maintenance of treatment systems for approximately 5,000-acre CERCLA Superfund site at Areas B, D, 20A, 29, and Area 41. Assisted with operation and maintenance of the existing Central Treatment Plant (Pump and Treat System) to treat petroleum contaminated water. Provided innovative remediation enhancements, such as in-situ aerobic bioremediation of petroleum compounds and reductive dechlorination of chlorinated solvents, contaminated soil removal, vapor extraction, groundwater and soil investigations, GIS mapping and support, groundwater modeling, and routine regulatory interaction.

Executive Summary

South Florida Water Management District (SFWMD) contracted with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the S36 Gated Spillway Facility (subject property) identified by Broward County Parcel Identification Number (PIN) 4942-20-00-0040, Oakland Park, Broward County, Florida. This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21). Exceptions to, or deletions from, this practice are described in this report.

The site visits were conducted on January 10, 2025 (exterior portions and surrounding area) and January 22, 2025 (interior of the onsite building). The approximate 7.9-acre subject property encompasses an estimated 4.4 acres of the Middle River Canal, a gated spillway structure, S36, and a small, single-story control building that houses electrical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically controlled. One (1) underground storage tank (UST) containing propane of an unknown capacity was observed next to the onsite structure on the northcentral portion of the subject property during the site reconnaissance. Additionally, four (4) water wells were observed at the subject property, north of the Middle River Canal. According to the information reviewed from a SFWMD Florida Aquifer System (FAS) Test Well program, each well monitors different zones of the FAS (i.e. Lower, Middle, and Upper). The purpose of the FAS Well program is to assess the subsurface hydrogeologic and water quality properties and to evaluate the potential of the FAS as a water supply resource. The wells are located in areas protected with a locked fence or locked metal shed. No visual potable water wells, clarifiers, dry wells, septic tanks, or leach fields were observed during the site visit.

The subject property is located in a residential area within the city of Oakland Park. The subject property is bordered to the north by Northwest 39th Street followed by Lake Emerald, a multi-tenant residential community and Lake Emerald. The subject property is bordered to the east by the Middle River Canal. The subject property is bordered to the southeast by Blue Heron Lake and to the southwest by multi-tenant residential properties. The subject property is bordered to the west by the Middle River Canal. Gasoline service stations and dry cleaners were not observed in the immediate vicinity (approximately 500 feet) of the subject property. Other off-site sources of concern were not identified in the immediate vicinity.

AECOM's historical review indicates that the subject property was developed with a narrow canal extending east to west along the southern south half of the subject property and agricultural row crops on the northern portion from at least 1940. By at least 1958, the Middle River Canal has been widened and the present-day gated spillway structure, S36, is depicted within the canal in the northcentral area of the subject property. Additionally, a dirt road parallel and north of the canal is depicted. By at least 1968, land clearing is depicted along the northern edge of the subject and extends offsite, to the north. By at least 1973, the present-day control building is depicted north of the canal in the central area of the subject property. The subject property remains in this general configuration until at least 2013, when the previously depicted road, north and parallel to the canal, has been redeveloped into a paved sidewalk and erosion control techniques, such as riprap placement, is depicted east of the gated spillway, on north and souths sides of the canal, extending less than a ¼ mile east. The subject property has remained in its current configuration (as observed during AECOM's site visit) since at least 2013. No recognized environmental conditions (RECs) were identified based on the historical review.

The subject property was not identified on the Environmental Data Resources, Inc. (EDR) environmental database search report obtained for this project. A number of surrounding sites were identified in the EDR environmental database search report. However, the majority of these sites were listed on non-contamination-related databases. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present a REC to the subject property, based on their lack of documented contamination, distance (generally greater than 500 feet), regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the subject property (i.e., down-gradient or cross-gradient).

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Based on the above-described circumstances, no RECs, controlled RECs (CRECs), historical RECs (HRECs), significant data gaps or de minimis conditions (DMCs) were identified in connection with the subject property.

In addition, no vapor encroachment conditions (VECs) were identified during completion of a Tier 1 vapor encroachment screening (VES) following ASTM International, Designation: E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated May 2022 (ASTM E2600-22).

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (Phase I ESA) was performed pursuant to AECOM Technical Services, Inc. (AECOM's) written proposal, dated October 30, 2024, and Contract No. 4600004507-Work Order No. 14, for the S36 Gated Spillway Facility identified by Broward County Parcel Identification Number (PIN) 4942-20-00-0040, Oakland Park, Broward County, Florida (herein referred to as the "subject property"). This assessment was performed in advance of the potential spillway improvements at the subject property.

The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property. Per ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), de minimis conditions (DMCs) and significant data gaps as follows:

- A REC is defined by the ASTM standard as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.
- A HREC is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority and meeting unrestricted use criteria established by a regulatory authority or authorities without subjecting the subject property to any required controls.
- A CREC is defined as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (activity and use limitations or other property use limitations).
- DMCs are conditions related to a release that generally do not present a threat to human health or the environment and generally would not be subject to enforcement action if brought to the attention of the appropriate governmental agencies.
- A significant data gap is a data gap that affects the ability of the environmental professional to identify a REC.

In addition, a Tier 1 vapor encroachment screening (VES) is completed as part of this assessment. This screening is conducted in general accordance with ASTM International, Designation: E2600-22, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions dated May 2022 (ASTM E2600-22). The objective of the VES is to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a site visit, interviews, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property. Non-Scope Services per ASTM E1527-21 including, but not limited to, asbestos, lead paint, radon, floodplains and wetlands were not included in the scope of work. On April 17, 2024, EPA signed the final rule 20 to designate perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) collectively identified as per- and polyfluoroalkyl substances (PFAS) as hazardous substances under section 102(a) of CERCLA. This designation allows EPA to use its CERCLA enforcement authorities, as appropriate and where relevant statutory elements are met, which could shift the cost burden of CERCLA response costs from the Superfund to Potentially Responsible Parties (PRPs). As such, PFAS, is now considered part of the ASTM standard scope and is included in this scope of work.

This project was performed in general accordance with ASTM E1527-21 and AECOM's proposal to the client, dated October 30, 2024. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and the field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in ASTM E1527-21, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a subject property, and this practice recognizes reasonable limits of time and cost. (Section 4.5.1 of ASTM E1527-21)
- Not Exhaustive - "All appropriate inquiries" does not mean an exhaustive assessment of a property. There is a point at which the cost of information or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-21)
- Comparison with Subsequent Inquiry – It should not be concluded or assumed that an investigation was not AAI merely because the inquiry did not identify RECs in connection with a subject property. ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-21)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-21 is employed. According to ASTM E2600-22, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. Screening is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with the property. (Section 4.5.1 of ASTM E2600-22)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained, or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-22)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-22)

This report was prepared pursuant to an agreement between South Florida Water Management District (SFWMD) (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Report Viability

According to ASTM E1527-21, an ESA "meeting or exceeding this practice is presumed to be viable when it is conducted within 180 days of acquisition of the subject property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The dates of the components presented in 4.6.2(i), (iii), (iv), and (v) for interviews, review of government records, visual inspections, and declaration by environmental professional, shall be identified in the report. Completion of searches for recorded environmental cleanup liens (4.6.2(ii)) is a user responsibility; however, if the user has engaged the environmental professional to conduct these searches, then that date shall also be identified in the report." The table below lists the dates of completion for pertinent components of this Phase I ESA.

Component	Date of Issuance/Completion
Interviews with Owners, Operators and Occupants	January 22, 2025
Environmental Database Report	November 1, 2024
Visual Inspection of the Subject Property and Adjoining Properties	January 10, 2025/January 22, 2025
Declaration by Environmental Professional	August 20, 2025
Issuance of Report	August 20, 2025

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Report Viability Expiration Date*	April 30, 2025

* The 180-day viability date is based on the earliest referenced component noted in the table above.

1.5 Data Gaps

Per ASTM E1527-21:

- A data gap is defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.
- A data gap is considered a significant data gap if other information and/or professional experience raises reasonable concerns involving the effects of that data gap on the ability of the environmental professional to render an opinion regarding whether conditions exist that are indicative of RECs or CRECs.

The following data gaps (to include site-specific limitations) were encountered during the course of this assessment:

- During the site visit, AECOM did not access the roof of the control building. AECOM's evaluation of the subject property focused on areas where hazardous substances are handled. The site contact did not report any hazardous substances associated with the roof or within the building. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- Approximately 56% of the subject property is covered by water; therefore, not all areas were able to be observed/assessed. Based on the use of this portion of the subject property and a review of historical documents, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this Phase I ESA. The user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property. Based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.
- A data failure was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1940. At the time of the photograph, the subject property appeared to be a canal and portions of agricultural row crops (a developed use per ASTM E1527-21). Therefore, the ASTM E1527-21 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to be significant so that it would impact the results of this assessment.
- It should be noted that not all standard historical sources, as defined per ASTM E1527-21, were reviewed as part of this assessment. In addition to recorded land title records, building department records were not reviewed. Based on information provided from the remaining standard historical sources, additional historical information obtained from building department records would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to be significant so that it would impact the results of this assessment.
- Per ASTM E1527-21, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

- Per the agreed scope-of-work and ASTM E1527-21, information related to certain site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-21; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant data gap to this investigation, given the historical use of the subject property.
- AECOM submitted a Public Records Request (PRR) to the Oakland Park Fire Rescue and Florida Department of Environmental Protection (FDEP) to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's PRR has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the Oakland Park Fire Rescue to our PRR will significantly alter the conclusions or recommendations of this report. However, if information is received from this PRR that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

2. Site Description

2.1 Site Location and Parcel Description

The subject property consists of approximately 7.9-acres of land and canal and is identified by Broward County PIN 4942-20-00-0040. The subject property is located in Oakland Park, Broward County, Florida. The subject property is a rectangular shaped tract of land and canal that includes a gated spillway structure, S36, situated within the Middle River Canal, approximately ½ mile west of Northwest 31st Avenue. The subject property is accessed from Northwest 39th Avenue (northern property boundary). The approximate location of the subject property is illustrated on Figure 1 - Site Location Map.

2.2 Site Ownership

According to the Broward County Property Appraiser's records, the subject property is owned by SFWMD.

2.3 Site Visit

Ms. Kelsey Esteves and Mr. Matthew Schlak with AECOM visited the subject property on January 10, 2025, and Ms. Esteves visited the subject property again on January 22, 2025. The initial site visit included a visual inspection of the exterior portions of the subject property and the surrounding area. During the initial site visit, the AECOM team was unaccompanied. During this visit, the onsite control building was inaccessible. As a result, a follow up visit was conducted in order to observe the interior of the control building. During the January 22, 2025, site visit, Ms. Esteves was accompanied by Mr. Josh Feltner, Leasing & Real Estate Support – Environmental Science Unit, of the SFWMD. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.5.

The site visit methodology consisted of walking over accessible areas of the subject property, including the building interior and exterior, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visits.

2.3.1 Site and Facility Description

The approximate 7.9-acre subject property encompasses an estimated 4.4 acres of the Middle River Canal, a gated spillway structure, S36, and a single-story control building that houses electrical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically, or telemetry controlled.

The onsite structure is a reinforced concrete, gated spillway, with discharge controlled by cable operated, vertical lift gates. The operation of the gate is automatically controlled so that gate operating system opens or closes the gates in accordance with seasonal operational criteria.

During the site visit, one (1) underground storage tank (UST) containing propane of an unknown capacity was observed next to the onsite structure on the northcentral portion of the subject property. Additionally, four (4) water wells were observed at the subject property, north of the Middle River Canal. According to the information reviewed from a SFWMD Florida Aquifer System (FAS) Test Well program, each well monitors different zones of the FAS (i.e. Lower, Middle, and Upper). The purpose of the FAS Well program is to assess the subsurface hydrogeologic and water quality properties and to evaluate the potential of the FAS as a water supply resource. The wells are located in areas protected with a locked fence or locked metal shed. No visual potable water wells, clarifiers, dry wells, septic tanks, or leach fields was observed during the site visit. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors were identified during the site visit. In addition, no visual evidence of significant corrosion was identified on the floors or walls of the spillway structure or control building of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

2.3.2 Surrounding Properties

The subject property is located in a residential area within the city of Oakland Park. The subject property is bordered to the north by Northwest 39th Street followed by Lake Emerald, a multi-tenant residential community and Lake Emerald. The subject property is bordered to the east by the Middle River Canal. The subject property is bordered to the southeast by Blue Heron Lake and to the southwest by multi-tenant residential properties. The subject property is bordered to the west by the Middle River Canal.

AECOM did not identify any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. Two (2) sensitive receptors (i.e., day care centers, schools, hospitals) were identified as being located adjacent west of the subject property, Lauderdale Lakes Middle School and Oriole Elementary School. However, based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of concern were identified.

2.3.3 Petroleum Products and Hazardous Materials

No petroleum products or hazardous materials use, or storage was observed at the subject property. Staining or visual evidence of a hazardous materials release was not observed at the time of the site visit.

2.3.4 Hazardous Waste

No evidence of hazardous waste generation was observed at the subject property, and the site contact reported no such activities. In addition, the subject property was not listed as a generator of hazardous waste in the site-specific database report.

2.3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the use of the site, PCBs are not expected to be present on-site.

Hydraulic equipment (transformers, trash compactors, lifts) was not identified on the subject property. The on-site loading docks are manually operated.

2.3.6 Aboveground Storage Tanks

Aboveground storage tanks (ASTs) were not observed on the subject property during the site visit. In addition, no ASTs were listed in the site-specific environmental database report reviewed by AECOM, or otherwise identified during AECOM's review of historical aerial photographs.

2.3.7 Underground Storage Tanks

One (1) UST containing propane of an unknown capacity was observed next to the onsite structure on the southeastern portion of the subject property. Due to the nature of propane (gas at normal temperature and pressure), this propane storage is not considered a significant concern.

2.3.8 Solid Waste

Based on the lack of activities on-site, no solid waste is expected to be generated at the subject property.

2.3.9 Water

Municipal water is not currently provided to the subject property. No potable water wells were observed at the subject property or reported by the site contact to be present on-site.

2.3.10 Wastewater

Due to the lack of activities on-site, no wastewater is currently generated on the subject property.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

2.3.11 Stormwater

Stormwater from the subject property appears to drain via sheet flow to the stormwater drains located throughout the subject property. The subject property is connected to the municipal stormwater sewer system. No staining was observed in the vicinity of the storm drains.

2.3.12 Heating and Cooling

The on-site spillway structure and control building are not equipped with heating or cooling services.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

3. Environmental Setting

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic map of the Fort Lauderdale North, Florida quadrangle and a review of the Google Earth application indicate that the subject property elevation ranges from approximately 0 to 3 feet above mean sea level (amsl). Approximately 4.4 acres of the 7.9-acre site consist of the Middle River Canal. However, the remaining subject areas are developed and surface water runoff from the subject property is likely diverted to man-made drainage systems.

3.2 Soil/Geology

Site-specific geologic information was not identified during the course of this assessment; however, according to state and regional geologic sources, the subject property lies within the Gold Coast – Florida Bay Physiographic District. This is the area of south and southeastward sluggish drainage from Lake Okeechobee. The rocks and sediment are Pleistocene aged and are largely limestones or limestone cap rocks. The site lies within the sub classification of the Southern Atlantic Coastal Strip Subdistrict. The subdistrict consists of a broad ridge underlain by sand and shelly sand that probably originated as a shoal. Very gentle slopes exist on the westward side. The eastern side is more complex having been subsequently modified by marine processes. Within the Southern Atlantic Coastal Strip are six (6) geologically distinct sections. The subject site lies within the Pompano-Fort Lauderdale Gap. This is an area with no detectable coastal ridge; the elevations are generally 10-12 feet amsl (UF, 1981).

Surface soils at the subject property are mapped as the Udorthents. Udorthents soils consist of unconsolidated or heterogeneous geologic material removed in the excavation of ditches, canals, lakes and ponds. It is commonly piled along banks and has slopes of 2 to 40 percent. Few if any other soils are included in mapping. The soil is moderately well drained. Weeds and native grasses have become established in some areas of Udorthents. Other areas have little or no vegetation. The soil material is erodible, especially where slopes are steep and where areas are bare or sparsely vegetated. This soil is unsuited to cultivated crops, citrus, or improved pasture. It is frequently used as a source of roadbuilding material and as a source of fill for new homesites, golf courses, and other purposes. This soil is not assigned to a capability subclass. (USDA, 1984).

3.3 Groundwater/Hydrology

Site-specific hydrologic information was not identified during the course of this assessment. Based on topography and geologic conditions, uppermost groundwater likely occurs within 3 to 4 feet of the ground surface at the subject property (USGS, 1995). Uppermost groundwater flow direction likely follows local topography generally southeast and towards the Middle River Canal. It should be noted that the actual depth and flow direction of groundwater beneath the subject property cannot be determined without site-specific groundwater monitoring well data.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1940, 1947, 1952, 1958, 1961, 1968, 1973, 1976, 1981, 1988, 1992, 1995, 1999, 2007, 2010, 2015, and 2019;
- Google Earth aerial images dated 1995, 1999, 2002 through 2008, 2010, 2011, 2013 through 2024;
- Topographic maps dated 1945, 1949, 1962, 1969, 1973, 1983, 1995, 2012, 2015, 2018, and 2021;
- City directories for the years 1985, 1990, 1992, 1995, 1999, 2000, 2005, 2010, 2014, 2017, and 2020;

Building Department records were not reviewed during the course of this assessment. According to EDR, Sanborn® Fire Insurance Map coverage is not available for the subject property. Copies of the historical documents/reports are provided in Appendix B.

4.1 Subject Property

AECOM's historical review indicates that the subject property was developed with a narrow canal extending east to west along the southern south half of the subject property and agricultural row crops on the northern portion from at least 1940. By at least 1958, the Middle River Canal has been widened and the present-day gated spillway structure, S36, is depicted within the canal in the northcentral area of the subject property. Additionally, a dirt road parallel and north of the canal is depicted. By at least 1968, land clearing is depicted along the northern edge of the subject and extends offsite, to the north. By at least 1973, the present-day control building is depicted north of the canal in the central area of the subject property. The subject property remains in this general configuration until at least 2013, when the previously depicted road, north and parallel to the canal, has been redeveloped into a paved sidewalk and erosion control techniques, such as riprap placement, is depicted east of the gated spillway, on north and souths sides of the canal, extending less than a ¼ mile east. The subject property has remained in its current configuration (as observed during AECOM's site visit) since at least 2013. No recognized environmental conditions (RECs) were identified based on the historical review.

4.2 Adjoining Properties and Surrounding Area

The 1940 historical aerial depicts the northern adjoining property to consist of agricultural land; the onsite canal extends east, with agricultural land north and south of the canal; an unimproved road, parallel to the canal, and vegetated land to the south; and the extension of the onsite canal to the west, with agricultural land to the north of the canal and vegetated land south of the canal. By at least 1958, land clearing is depicted to the northwest and material processing is depicted to the southwest. By at least 1961, a borrow lake is depicted to the east, south of the canal and a large borrow operation is depicted on the northern portion of the northern adjoining property. By at least 1968, the borrow lake, previously depicted to the east, has extended west to the southwestern adjoining property. Additionally, the northeastern adjoining property consists of a large borrow lake. By least 1973, Northwest 39th Street (the northern property boundary) is depicted in its current configuration. During this time the Lauderdale Lakes Middle School and Oriole Elementary School are depicted to the west, north of the Middle River Canal. By at least 1976, material processing is no longer depicted, and a small lake is present on the southwestern adjoining property. By at least 1988, the present-day multitenant community, Lake Emerald, is depicted to the north and the construction of the multi-tenant residential community to the southwest is depicted. The surrounding areas are depicted in the general configuration observed during AECOM's site reconnaissance since at least 1992. No historical off-site sources of concern were identified.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were not identified during this assessment, nor were they provided by the Client for review.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5. Database and Records Review

5.1 User Provided Information

Section 6 of ASTM E1527-21 states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-21; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Land Title and Judicial Records for Environmental Liens and Activity and Use Limitations

Information pertaining to chain-of-title, environmental liens or activity and use limitation was not provided to AECOM by the User (i.e., the client), nor was AECOM contracted to obtain information pertaining to chain-of-title, environmental liens or activity and use limitations. Environmental agency databases as provided by EDR show no indication of deed restrictions or activity and use limitations due to a release of hazardous materials.

5.3 Database Information

In accordance with the scope of work and ASTM E1527-21, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report. It should be noted that this information is reported as AECOM received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either AECOM or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. In some cases, additional sites were identified within the database report; however, EDR was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in the database report as "orphan" sites. A summary of AECOM's review, no orphan sites were identified. A copy of the EDR database report is provided in Appendix C.

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

5.3.1 Subject Property

The subject property was not identified in the site-specific environmental database report.

5.3.2 Surrounding Sites

According to the environmental database report, numerous sites (over 10) were identified within their respective ASTM E1527-21 and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e., closed, no violations found), media impacted (i.e., soil only),

and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Due to its proximity to the subject property, the following site is discussed in additional detail:

- Broward County School Building-Lauderdale Lakes, 3911 Northwest 30th Avenue, Facility ID's: 9047354 and FLD984201855, is located approximately 330 feet northwest of the subject property. This site is listed on the Resource Conservation and Recovery Act – Very Small Quantity Generator (RCRA-VSQG), Leaking Underground Storage Tank (LUST), UST, and Division Waste Management Contamination Sites (DWM Contam) databases. Further review of the databases and publicly available documents indicates this facility is Boyd Anderson High School, not Lauderdale Lakes Middle School, located at 3050 Northwest 41st Street, and is incorrectly mapped. This address is located more than 1,600 feet northwest of the subject property. Given the distance to the subject property, this listing is not considered a REC, in AECOM's opinion

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 VES as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-22. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

5.4.1 Subject Property

No on-site sources of vapor encroachment (e.g., UST, contaminated soil, groundwater plume, etc.) were identified during this assessment. Based on this information, a VEC due to an on-site source does not appear to exist.

5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that 10 CVOC/SVOC and no petroleum hydrocarbon impacted sites are located with the above-described radii of the subject property. However, the 20 sites can be ruled out due to their regulatory status (i.e., regulatory closure has been issued), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Based on this information, it is AECOM's opinion that a VEC at the subject property due to an off-site source does not appear to exist.

5.4.3 Local

AECOM submitted a Public Records Request (PRR) to the Oakland Park Fire Rescue on January 10, 2025, to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's PRR has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the Oakland Park Fire Rescue to our PRR will significantly alter the conclusions or recommendations of this report. However, if information is received from this PRR that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5.4.4 County

AECOM reviewed the Broward County Property Appraiser's online database for records pertaining to the subject property's physical and parcel addresses. No records were identified for the subject property physical and parcel addresses.

5.4.5 State

AECOM submitted a Public Records Request to the FDEP on February 4, 2025, for information pertaining to the generation, transportation, storage, treatment and/or disposal of hazardous waste as well as any historical petroleum or chemical releases, leaking petroleum tanks, environmental assessment activities, and/or notices of violation that may have occurred on the subject property. No information was received during the time frame of this assessment. AECOM searched the FDEP Nexus Information Portal online database.

5.4.6 Federal

AECOM searched the United States Environmental Protection Agency's (US EPA's) Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potentially hazardous waste sites. The subject property was not listed on the Envirofacts or SEMS databases.

6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM E1527-21, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings of this Phase I ESA and the opinions of the environmental professional.

6.1 Recognized Environmental Conditions

Based on the above-described activities, no RECs were identified in connection with the subject property.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the subject property.

6.4 Vapor Encroachment Conditions

Based on the above-described activities, no VECs were identified in connection with the subject property.

6.5 De Minimis Conditions

Based on the above-described activities, no DMCs were identified in connection with the subject property.

6.6 Significant Data Gaps

ASTM E1527-21 requires the environmental professional document significant data gaps, as well as any exceptions to, or deletions from the ASTM Practice E1527-21. A significant data gap is a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Based on the above-described activities, no significant data gaps were identified during this Phase I ESA.

7. Conclusions

AECOM has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the S36 Gated Spillway Facility identified by Broward County PIN 4942-20-00-0040, Oakland Park, Broward County, Florida, the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.

8. Environmental Professional Statement

Mr. Madabhushi was the Environmental Professional (EP) for this project. Mr. Madabhushi's EP statement is below and his resume is provided in Appendix D:

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # E902-4774-8088

PO # 60741079

Project SFWMD - S36 - Spillway

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: E902-4774-8088

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

Limited Permission To Make Copies

AECOM (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

Address Researched	Address Not Identified in Research Source
Fort Lauderdale	2020, 2017, 2014, 2010, 2005, 2000, 1999, 1995, 1992, 1990, 1986, 1985, 1980, 1979, 1975, 1973, 1970, 1965, 1962, 1961, 1958, 1957, 1955, 1953, 1951, 1949, 1948, 1926, 1921

STRUCTURE 36

This structure is a reinforced concrete, gated spillway, with discharge controlled by a cable operated, vertical lift gate. Operation of the gate is automatically controlled so that the gate electric motor opens or closes the gate in accordance with the seasonal operational criteria. The structure is located on Canal 13 west of Oakland Park.

PURPOSE

This structure maintains optimum water control stages upstream in Canal 13; it passes the design flood (50 percent of the Standard Project Flood) without exceeding upstream flood design stage, and restricts downstream flood stages and discharge velocities to non-damaging levels; and it prevents saline intrusion during periods of high flood tides.

OPERATION

This structure will be operated to maintain an optimum headwater elevation of 4.5 feet when sufficient water is available to maintain this level. The automatic controls normally function as follows:

When the headwater elevation rises to 4.9 feet, the gates will open at six inches per minute;

When the headwater elevation rises or falls to 4.4 feet, the gates will become stationary;

When the headwater elevation falls to 4.0 feet, the gates will close at six inches per minute.

During dry periods, the automatic controls function as follows:

When the headwater elevation rises to 5.5 feet, the gate will open at six inches per minute;

When the headwater elevation rises or falls to 4.5 feet, the gate will become stationary;

When the headwater elevation falls to 4.2 feet, the gate will close at six inches per minute.

Salinity Regulation

In addition to maintaining optimum upstream fresh water control, as described above under Flood Control Regulation, the automatic controls on this structure have an overriding control which closes the gates, regardless of the upstream water level in the rare event of the high flood tide, whenever the differential between the head and tailwater pool elevations reaches 0.2 feet.

Lifting Mechanism

Normal power source commercial electricity

Emergency power source LP gas driven generator

Type Hoist direct drive electric motor, gear connected to cables

ACCESS: Structure located 1/2 mile west of NW 21st Avenue on NW 39th Street or 1/2 mile east of 31st Avenue on NW 39th Street.

HYDRAULIC AND HYDROLOGIC MEASUREMENTS

Water Level Digital upstream and downstream recorders, on-site (U.S.G.S.) and remote

Gate Position Recorder On-site analog & remote digital recorder

Rain Gauge: Remote, digital recorder

DEWATERING FACILITIES

Storage West Palm Beach Field Station

Type steel needle beam and aluminum needles

Size and Number (per bay)

Upstream and downstream

Beam 16WF88, 26' -11" long

Needles 5 each, 5' wide

FLOOD DISCHARGE CHARACTERISTICS

	Design*	Standard Project Flood*
Discharge Rate	1090 cfs	1640 cfs
	50 % SPF	100 % SPF
Headwater Elevation	5.3 feet	7.7 feet
Tailwater Elevation	4.8 feet	6.9 feet
Type Discharge	uncontrolled submerged	uncontrolled submerged

*Flow conditions given in the Definite Project Report. No discharge curves for these flow conditions available.

DESCRIPTION OF STRUCTURE

Type reinforced concrete, gated spillway

Weir Crest

Net Length 25.0 feet

Elevation -7.0 feet

Service Bridge Elevation 11.5 feet

Water Level which will by-pass structure 11.5 feet

Gates

Number 1

Size 14.0 ft. high by 25.0 ft. wide

Type vertical slide gate

Bottom elevation of gates, full open 9.5 feet

Top elevation of gates, full closed 7.0 feet

Control On-site, automatic headwater control with differential water level override sensed by bubbler system and remote computer control.

EXECUTIVE SUMMARY

The Lower East Coast (LEC) Planning Area of the South Florida Water Management District (District) includes Miami-Dade, Broward and Palm Beach counties. Water supply plans developed for the LEC (SFWMD, 1993, 2000) have identified the Floridan aquifer system (FAS) as a possible water supply alternative and have recommended it be further explored and characterized. Based on these recommendations, the District initiated a program of exploratory well construction, aquifer testing, and long-term monitoring to provide data needed to assess and model the FAS underlying the area.

This report documents the results of construction and testing of four new FAS wells by the District. The wells were constructed within the City of Oakland Park, Broward County near the District operated salinity control structure S-36 on the C-13 canal's northern right-of- way. This site was selected to augment data available from other wells and to provide broad, spatial coverage within the District's LEC Planning Area. The purpose of the drilling and testing program was to assess the subsurface hydrogeologic and water quality properties and to evaluate the potential of the FAS as a water supply resource at the site.

The scope of the investigation consisted of constructing and testing four FAS wells. The first "pilot" well (BF-1) was drilled to a total depth of 2,280 feet below land surface (bls). This pilot hole was extensively tested and ultimately completed as a deep monitor well into the lower Floridan aquifer. The second well (BF-2) was completed as a larger diameter (14-inch) well to pump a producing zone within the middle Floridan aquifer during an aquifer performance test. Then an upper Floridan aquifer production well (BF-3) was completed followed by a dual zone monitor well, BF-4S and BF-4M, completed into the upper and middle Floridan aquifer, respectively.

The main findings of the exploratory drilling and testing program are as follows:

- Surficial sediments extended from land surface to a depth of approximately 361 feet bls and the Hawthorn Group (upper confining unit) was found to extend to approximately 940 feet bls.

- Limestone comprising the uppermost FAS was identified at a depth of approximately 975 feet bls based on lithologic and hydrogeologic observations.

- An "upper" producing zone was found 25 feet below the top of the FAS between 1,000-1,030 feet bls. The temperature log also indicated the presence of another strong flow zone between 1,145 to 1,155 feet bls. An aquifer performance test (APT) was run across the open-hole interval between 1,000 to 1,200 feet bls. Analysis (using Hantush, 1960) of the time-drawdown data from this (APT) resulted in a transmissivity (T) of 119,600 gallons per day per foot (gpd/ft) and a leakance value of $1.52e^{-3}$ gallons per day per foot. Water sampled from that interval contained a chloride concentration of approximately 4,218 milligrams per liter (mg/L).

- A "middle" producing zone was identified between 1,500 and 1,600 feet bls. This interval had an APT derived transmissivity (Hantush Jacob, 1955) of approximately 70,300 gpd/ft and a leakance value of $2.22e^{-3}$ gallons per day per foot. Water collected from this zone had a chloride concentration of 2,800 mg/L, which was less saline than the zone above it.

- The base of the Underground Source of Drinking Water (USDW) was identified at 1,710 feet bls using water quality analyses from straddle-packer tests and geophysical logs. That base is characterized by a total dissolved solids concentration equal to or greater than 10,000 mg/L.

- Lower zones within the middle confining unit between 1,726 and 1,772 feet bls and 2,078 and 2,088 feet bls exhibited low (corrected) specific capacities of 5.52 and 0.07 gallons per minute per foot (gpm/ft), respectively indicating significant confinement at that depth.

- The cross-well tomography system was used to test its applicability in mapping permeability profiles between two Floridan wells. The results of the pilot were inconclusive. Aquifer permeability mapped using cross-well tomography compared favorably with those from two aquifer performance tests, however those maps also displayed much higher permeability than expected within the middle-confining unit. Aquifer performance test results including estimates of transmissivity and hydraulic conductivity were provided to the contractor for use during their analyses.

- The unadjusted mean water levels in the upper, middle and lower FAS intervals (BF-4S, BF-4M, and BF-1) during the period from April 1993 to March 2001 were approximately +42, +45 and +7 feet above the National Geodetic Vertical Datum of 1929 (NGVD), respectively.

- When corrected to freshwater head equivalent levels, water levels in the upper, middle and lower Floridan aquifer zones calculated as +47, +49 and +59 feet above NGVD, respectively. This agrees with levels used to model the FAS regionally (Fairbank, 1999), (Lukasiewicz, 1992), (Tibbals, 1981).

- When adjusted for density, the gradient between the lower and upper FAS zones was approximately 10 feet. The interpreted direction of ground water movement is upward.

- Water levels in the upper and middle Floridan aquifer fluctuated within a range of approximately three feet above and below the average values during the period of record. Similarly, the lower Floridan aquifer fluctuated within a range of approximately two feet above and below the average values during the period of record. It is interesting to note that water levels in both the upper and lower Floridan aquifers increased over the period of record (7 years).

ACKNOWLEDGEMENTS

The author would like to give special recognition to three primary contributors to this project: Simon Sunderland, Robert Verrastro and Milton Switanek. Simon was instrumental in researching and plotting the hydrographs in the water levels section of this report and he provided a comprehensive technical review. Mr. Verrastro suggested and developed several of the graphics and also provided a detailed technical review. While with the District, Milton Switanek provided primary assistance as site geologist overseeing much of the drilling, construction and testing associated with this project. Milton now works for the U.S. Army Corp. of Engineers in Jacksonville, Fl. This publication has benefited considerably from the contributions of each of these three individuals, the author sincerely thanks each.

The author would also like to thank those who reviewed this manuscript both internal and external to the District. External reviewers included: Ron Reese of the United States Geological Survey, Jon Arthur and Rick Green of the Florida Geological Survey, Jim Anderson of Stemle, Anderson and Associates, and Jeff Rosenfeld of MacVicar, Federico and Lamb, Inc. Internal (District) reviewers included: Michael Bennett, Keith Smith, Simon Sunderland and Robert Verrastro. In addition, Cindy Bevier organized many of this project's archived files in the early stages of report compilation. The author also thanks Ms. Sorrel Hoover of Orion Consulting for patience, perseverance and technical editing expertise throughout this report compilation process. Thanks are extended to each of these professionals for their unique contributions. This document is a much more useful and organized tool thanks to their contributions.

During the well construction and testing phases, Mr. Robert Tinsely was a source of reliable, invaluable guidance and expertise. At the time Mr. Tinsely owned and operated RST Partnership, Inc (the drilling Contractor). He now works for All-Webb's Enterprises of Ft. Pierce. His expertise in the business of deep well drilling, testing and construction served this project well and the author is grateful to have had the opportunity to benefit and learn from him in the field.

INTRODUCTION

Background

Four wells were constructed under a South Florida Water Management District (District) contract (C-3229) near NW 39th Street in Oakland Park, Broward County, Florida as part of a Floridan aquifer System (FAS) exploratory drilling program. One of the four wells was completed as a dual-zone monitor well (BF-4S and BF-4M). All wells are located along the north bank of the C-13 canal just east of salinity control structure S-36 in Section 20 of Township 49 South, Range 42 East, at Latitude 26 degrees, 10 minutes 23 seconds and Longitude 80 degrees north, 10 degrees 44 seconds. **Figure 1** shows the location of District sponsored exploratory FAS sites drilled south of Lake Okeechobee in the 1990's for water supply planning purposes in south Florida and the reference numbers of the completed reports. The location of the C-13 site is identified on the map with an arrow as "Study Area." The wells were constructed to obtain hydrogeologic and water quality data from the FAS within the District's Lower East Coast (LEC) and Lower West Coast (LWC) planning areas. The District provided oversight during all well drilling, construction, and testing operations. Information from this exploratory drilling program will be used to assist in the conceptual development and calibration of a regional ground water flow model simulating the FAS. Such a model will be developed by the District and U.S. Army Corp of Engineers as part of the Aquifer Storage and Recovery (ASR) Regional Floridan Aquifer Studies project as part of the Comprehensive Everglades Restoration Plan (CERP). Information provided in this report includes a summary of: 1) well drilling and construction details, 2) site geology, 3) hydrogeologic testing, and 4) water quality and levels.

Project Overview

District staff prepared the well designs and technical specifications, and provided construction oversight of the drilling contractor. RST Partnership, Inc. (RST), of Fort Myers, Florida was selected as the contractor to construct and test the wells. District contract C-3229 was executed in September 1992 and a Notice to Proceed was issued November 1992. Construction began in December 1992 and was completed in July 1993. The contract included drilling, testing, construction and installation of associated wellhead piping and appurtenances for wells BF-1, BF-2, BF-3, BF-4M and BF-4S.

Once all wells were constructed, cross-well tomography was performed, under contract to the University of Miami, to map permeability and porosity between wells at the site. The outcome of that work is summarized in a separate report (Yamamoto and Kuru, 1997) and discussed briefly in this report.

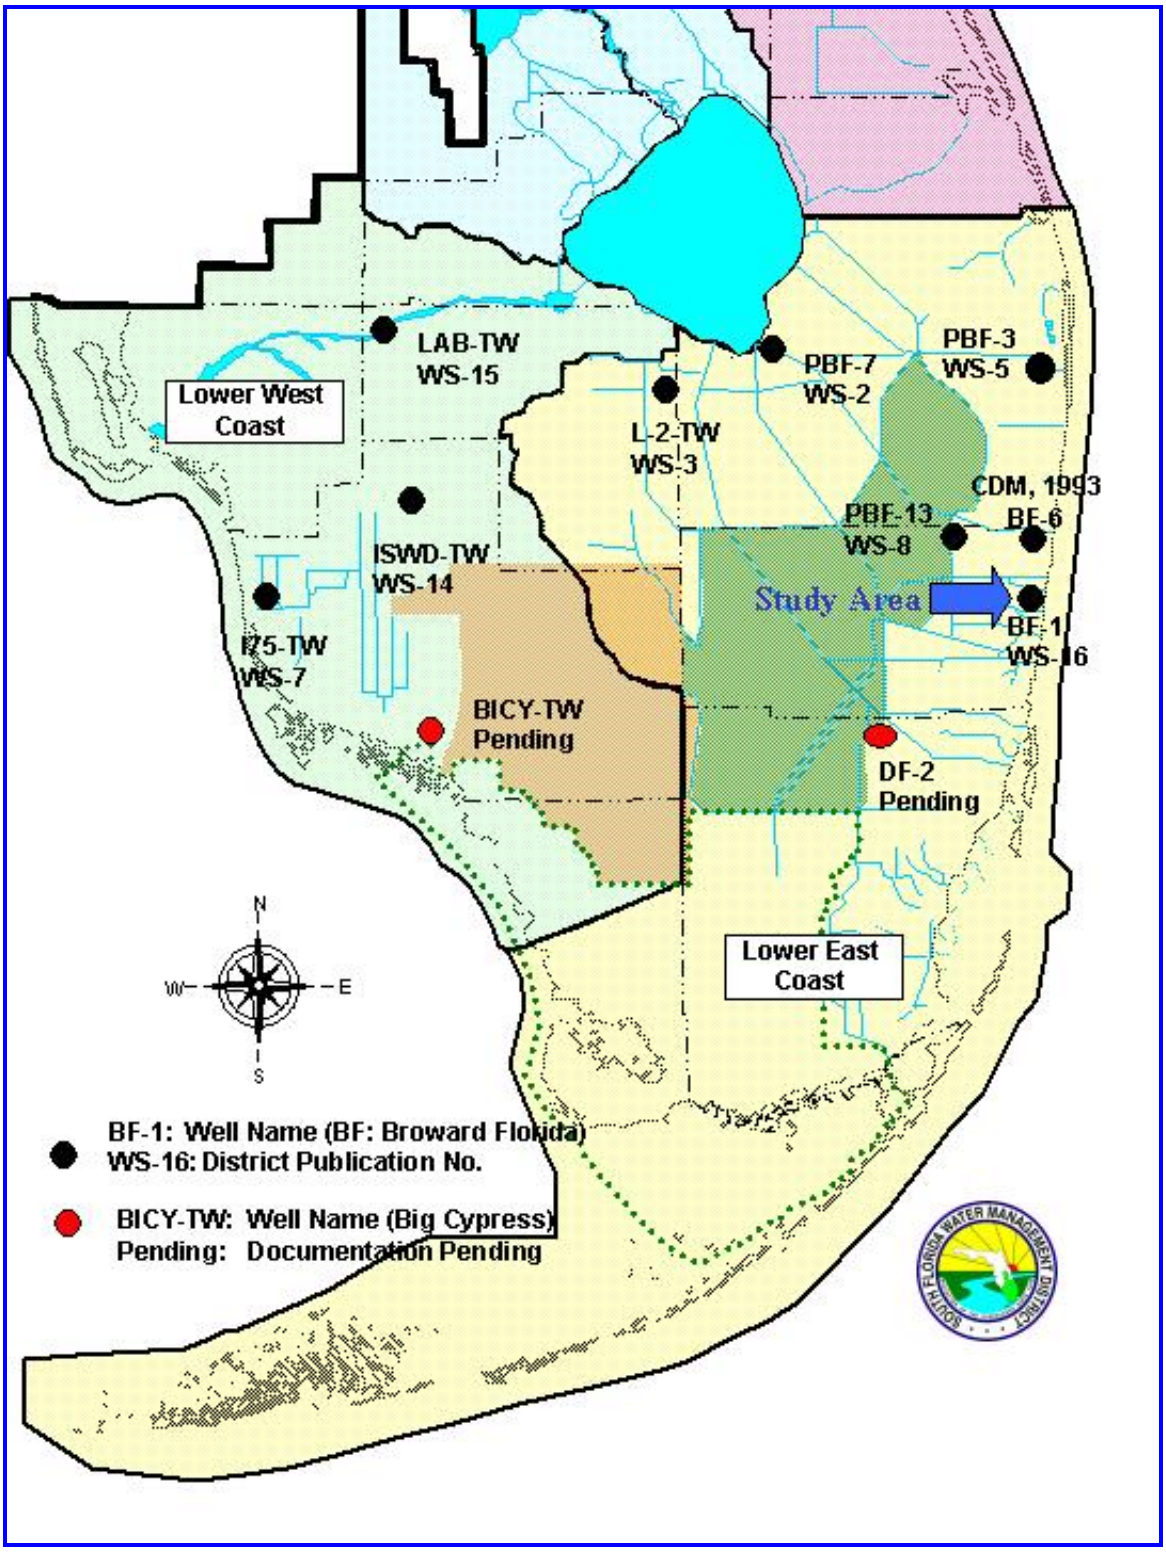

Figure 1. Location of All District Exploratory Floridan Aquifer Wells Constructed and Tested in the 1990's South of Lake Okeechobee.

EXPLORATORY DRILLING AND WELL CONSTRUCTION

Overview

Four FAS wells were constructed on the northern bank of the C-13 canal near the District's S-36 salinity control structure in Oakland Park, Broward County. The locations of the wells are shown in **Figure 2**. The drilling schedule and well casing setting depths for each of the wells were designed to conform to site-specific hydrogeologic features. Data collected during construction and testing of the wells resulted in the interpretation of lithology, geophysical properties, water quality, water levels, transmissivity, and storage and leakance coefficients corresponding to the producing zones within the FAS. The data were obtained from collection and description of drill cuttings, observations during pilot hole drilling, borehole geophysical logs, packer pumping tests, and two aquifer performance tests (APTs).

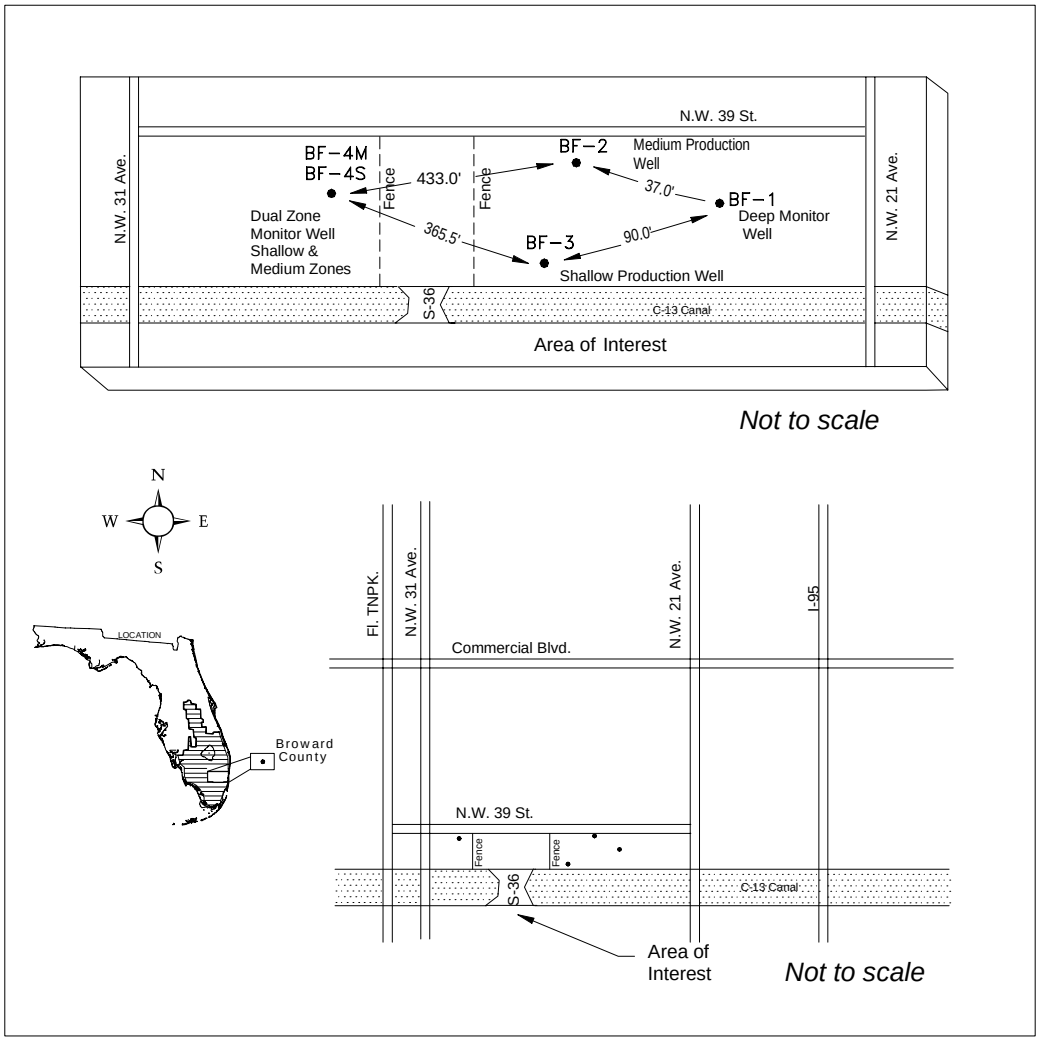

Figure 2. Site Location Map.

RST Partnership, Inc. was issued a notice to proceed by the District in November 1992 and began drilling December 1992 with the rig positioned at well BF-1 (see **Figure 2**). This BF-1 site is located approximately two hundred feet east of salinity control structure S-36 along the northern C-13 right-of-way. BF-1 served as the pilot hole, and ultimately the lower Floridan monitor well having a final total depth of 2,280 feet below land surface (bls). Once complete, the rig moved 37 feet northwest to construct BF-2, a middle Floridan aquifer production well with an open-hole interval between 1,500 to 1,600 feet bls. Once BF-2 was completed, the rig moved 77 feet southwest to drill BF-3, the uppermost Floridan production well. It was completed open-hole between 1,000 feet to 1,200 feet bls. Finally, the contractor move the drill rig 365 feet west (to the west side of S-36) to construct BF-4; a dual zone (upper and middle) Floridan monitor well. **Table 1** lists construction details for each well.

Identifier	Aquifer	MP (feet msl) Elevation	Monitor Interval (feet bls)	Completion Method	Type Well
BF-1	Lower Floridan	12.2	2,080 to 2,280	Open-Hole	Monitor
BF-2	Middle Floridan	n/a	1,500 to 1,600	Open-Hole	Test Production
BF-3	Upper Floridan	n/a	1,000 to 1,200	Open-Hole	Test Production
BF-4S	Upper Floridan	13.4	1,000 to 1,200	Annular Zone	Monitor
BF-4M	Middle Floridan	12.9	1,500 to 1,600	Open-Hole	Monitor

Table 1. Well Construction Summary.

All wells were constructed using conventional closed-circulation mud rotary drilling through the surficial aquifer and the upper confining unit, and reverse-air drilling through the FAS. **Figure 3** illustrates the "as-built" construction of all wells. All installed casings were made of steel and conformed to API 5L or ASTM 53, Grade B standards. Casing centralizers were used for each string of steel casing. All cementing of casings conformed to State of Florida well drilling practices and to American Water Well Association (AWWA) standards for deep wells (AWWA, A100-66).

Well site supervision during drilling operations, casing installation and cementing, packer testing, water quality testing, and aquifer performance testing was conducted by the SFWMD. Other technical support services were provided by Schlumberger (geophysical logging), Consolidated Hydro Technologies (geophysical logging) and Baker Corporation (packer testing).

The information collected during well construction included lithology, water quality, static heads, transmissivity, storage coefficients, and vertical conductivity measurements of the various zones within the FAS. BF-1, BF-4S, and BF-4M were incorporated into a regional monitor well network to obtain temporal water levels.

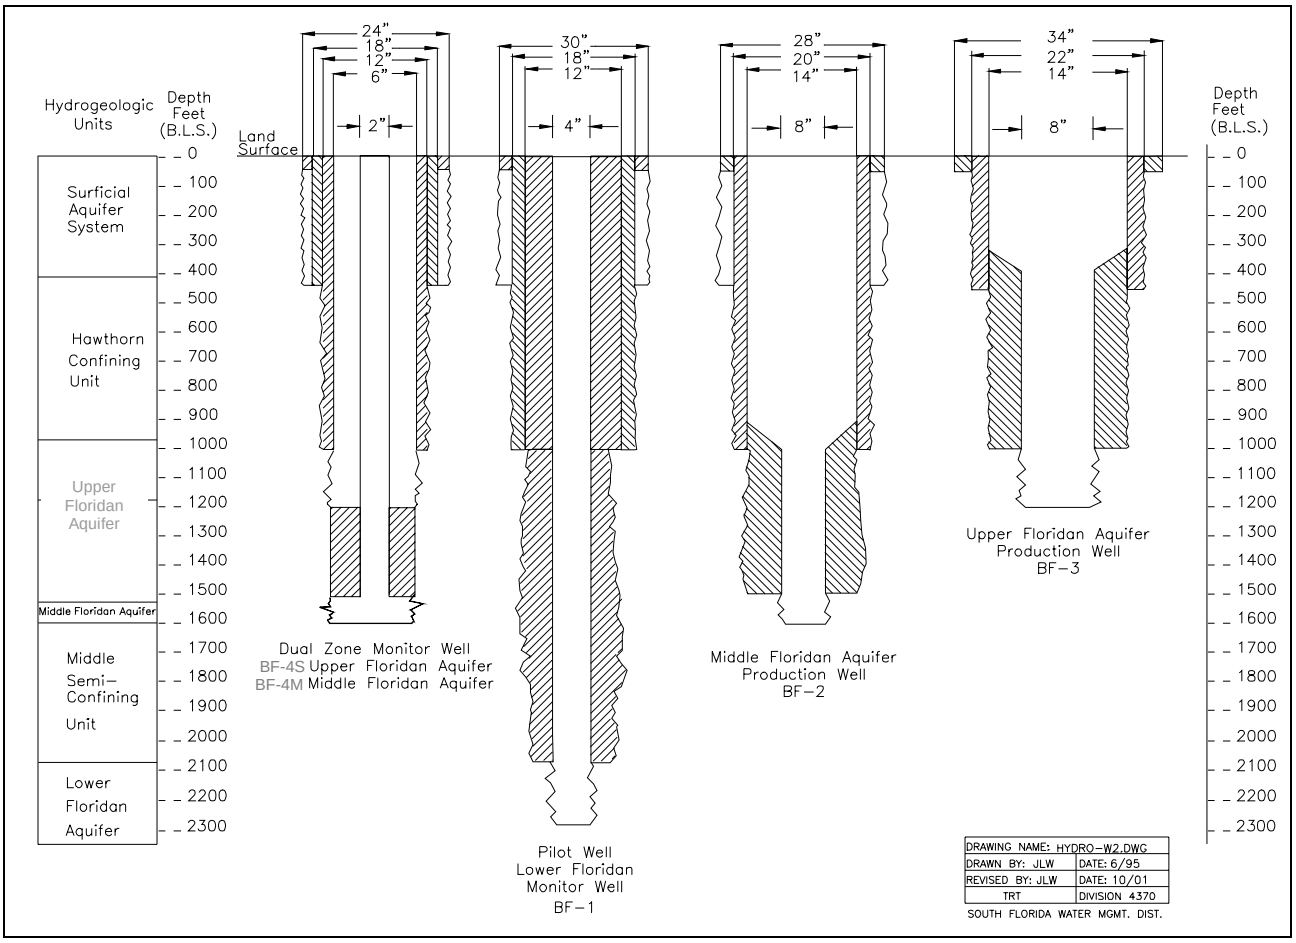

Figure 3. Well Construction Designs.

BF-1: Pilot Hole and Lower Floridan Aquifer Well

Construction of the exploratory FAS well (BF-1) was initiated December 1992 and completed in January 1993. This pilot hole, which was subsequently converted into a lower Floridan aquifer monitor well shown in **Figure 3,** was used to design the three remaining wells on the site. The well was drilled to a total depth of 2,280 feet bls. Geophysical logs, packer tests and lithologic cuttings were used to identify three production zones within the FAS. The reverse-air drilling method (with open circulation) was used to advance the borehole from 1,000 feet bls to the total depth of 2,280 feet bls. Cuttings were collected and described at 10-foot intervals or at any significant change in lithology within the descriptions provided in **Appendix A.** Water samples were collected every 30 feet (end of drill rod) through the Floridan aquifer. A summary of the sequence of drilling, testing and casing runs is provided in the following sections.

Photograph 1: BF-1 (Lower Floridan Aquifer Well)

Steel Pit Casing 30-inch Diameter

A pilot hole was advanced to a depth of 30 feet bls using a nominal 10-inch diameter bit during which time cuttings were collected. This hole was then enlarged (reamed) using a nominal 36-inch diameter bit. Nominal 30-inch diameter steel pit casing was then installed 0 to 30 feet bls. The annulus was pressure grouted to land surface using ASTM Type II neat cement. The purpose of the pit casing was to stabilize the site during drilling operations.

Surface Steel Casing 18-inch Diameter

A nominal 8-inch diameter drill bit then advanced using the mud rotary method through the base of the surficial aquifer system (SAS) and 80 feet into the upper confining unit to a depth of 440 feet bls. This hole was then reamed (enlarged) using a nominal 22-inch diameter bit and caliper logged to calculate the volume of cement/grouting required to fill the annular space. Then an 18-inch diameter steel casing was installed and the annulus pressure grouted to land surface using ASTM Type II neat cement. The purpose of this surface casing was to seal off the SAS and prevent inter-aquifer mixing during drilling operations.

Intermediate Casing 12-inch Diameter

Following installation of the 18-inch diameter surface casing, mud rotary drilling with the nominal 8-inch diameter bit resumed to a depth of 1,000 feet bls (base of the upper confining unit and the top of the upper Floridan aquifer). Upon reaching 1,000 feet bls, drill pipe was removed from the borehole and geophysical logging performed. The interval between 440 to 1,000 feet bls was then reamed using a nominal 18-inch bit. A caliper log was run to verify borehole diameter for annular cement volume calculations prior to installing the 12-inch diameter steel casing to 1,000 feet bls. Once installed, the lowermost 100 feet of the annular space around the casing was pressure grouted using ASTM Type II neat cement. The remaining 900 feet of annular space was filled in stages with ASTM Type II neat cement. There was a minimum of eight hours setting time between each stage lift and then each lift was tagged using a 2-inch diameter steel tremmie pipe to ensure that the cement had risen and set as expected.

Pilot Hole Drilling and Testing

At this point, the drilling method was switched from closed circulation mud rotary to the open-circulation, reverse-air method. All cuttings were air-lifted over a shale shaker screen. Discharge water and the finer-grained cuttings were settled using a three-stage mud tank discharge system.

Once the 12-inch diameter casing was set to 1,000 feet bls, the pilot hole was advanced using a nominal 11-inch diameter bit and the reverse-air drilling method. Cuttings were collected every 10-feet and water samples every 30-feet during reverse-air drilling. Specific conductivity, temperature, and chloride concentration were measured in each of the water samples, the results of which are summarized in **Table 2.** Reverse-air drilling continued to a total depth of 2,280 feet bls, 100 feet below the uppermost portion of the solutioned crystalline dolomites, which marked the top of the lower Floridan aquifer. The borehole was then air-developed until the produced water was clear and free of particulates. The drill tools were then removed from the well and Schlumberger performed geophysical logging to a depth of 2,280 feet bls. The "***Hydrogeologic Testing***" chapter in this document summarizes the results of those geophysical logs. Geophysical and lithologic logs along with the site geologist's observations during drilling were used to select six intervals in the open borehole to packer test. The packer test results are also summarized in the "***Hydrogeologic Testing***" chapter of this report.

Lower Floridan Aquifer 4-inch Steel Casing

Once packer tests were complete, the well was again air-developed until discharge water was clear. Then the bottom 200 feet of the hole was backfilled with pea-sized gravel up to 2,080 feet bls. Once backfilled, 2,080 feet of 4-inch diameter steel casing was installed into the well. The lowermost 200 feet of the annular space around the casing was then pressure grouted using ASTM Type II neat cement. The remaining 1,880 feet of annular space was filled in stages using cement lifts until the entire annular space was filled up to land surface. There was a minimum of 8 hours setting time between each stage lift after which time each lift was tagged using a 2-inch diameter steel tremie pipe to ensure that the cement had risen and set as expected. When cement had adequately set, a nominal 4-inch diameter bit drilled out the basal 200 feet of pea-sized gravel. With gravel removed, the well was then air-developed until discharge water was clear.

Wellhead Installation

After air-developing the well, the upper lip of the 4-inch steel casing was fitted with a gate valve. The area around the wellhead was finished off with a 4-foot by 4-foot by 6-inch reinforced concrete pad surrounded by a locked chain link fence. This well currently serves as a monitoring well for long-term water levels and water quality testing for the lower Floridan aquifer. Between 1993 and 1999, water levels were measured by hand each month. In 1999, an electronic data recorder was installed and programmed to measure and store water levels every 15 minutes. These data are transmitted back to District headquarters via telemetry. Water levels are further discussed under the "***Water Levels***" section in this report.

BF-2: Middle Floridan Aquifer Well

The construction of BF-2 took place between February 1993 and March 1993. This well would facilitate aquifer testing of a single productive horizon in the middle Floridan aquifer between 1,500 to 1,600 feet bls. **Photo 2** shows the final wellhead with pad and gated enclosure. Four concentric steel casings (28-, 20-, 14-, and 8-inch diameter) were used in the construction of this upper Floridan aquifer test-production well. RST installed a 28-inch diameter pit casing to 30 feet bls. Mud rotary drilling advanced a 28-inch diameter. A caliper log was run to calculate cement volumes for grouting operations. Once completed, a 20-inch diameter steel casing was installed to a depth of 440 feet bls. Once installed, the casing was pressure grouted using ASTM Type II neat cement until cement returns were seen at the surface.

Photo 2: BF-2 (Middle Floridan Aquifer Well).

After setting the 20-inch diameter casing, a nominal 20-inch diameter bit advanced the borehole to the top of the upper Floridan aquifer production interval at 1,000 feet bls using the mud rotary method. A caliper log was then run prior to installation of 14-inch diameter casing to 1,000 feet bls. Once the casing was installed, the annular space was filled with ASTM Type II neat cement using both the pressure and tremie grouting methods.

RST then cleared the borehole of mud and advanced the borehole with a nominal 14-inch diameter bit using the reverse-air method to a total depth of 1,600 feet bls. A final 8-inch diameter steel casing was then installed between 900 to 1,500 feet bls. The upper portion of the 8-inch diameter casing was not extended to land surface (but to 900 feet bls) in order to save on casing costs and so the final well design would accommodate a larger diameter, high capacity pump. The drill stem then lowered the 8-inch diameter casing into place between 1,500 to 900 feet bls. At this time, the annular space was pressure grouted using ASTM, Type II neat cement and then allowed to set for 8 hours. Once set, the drill stem was "backed off" or unscrewed from the top of the 8-inch casing and removed it from the well.

RST then drilled an additional 100 feet of hole using a nominal 8-inch diameter bit via the reverse-air method to a total depth of 1,600 feet bls. The well was then air-developed until return waters were clear and free of particulates. In March 1993, RST completed construction of the well by installing a permanent 14-inch diameter gate valve and a portable top head flange consisting of monitoring ports, a cement pad and a security fence.

BF-3: Upper Floridan Aquifer Well

Construction of BF-3 took place between April and May 1993. This well would facilitate aquifer testing of a single productive horizon in the upper Floridan aquifer between 1,000 to 1,200 feet bls. **Photo 3** shows the final wellhead, pad, and gated perimeter. Three concentric steel casings (22-, 14-, and 8-inch diameter) were used in the construction of this upper Floridan aquifer test-production well. RST installed a 22-inch diameter pit casing to 30 feet bls. The annulus was grouted to land surface using ASTM Type II neat cement. Mud rotary drilling advanced a nominal 22-inch diameter borehole into the upper confining unit to 440 feet bls. A caliper log was then run to calculate cement volumes for grouting. Once complete, 14-inch diameter steel casing was installed. The casing annulus was then pressure grouted using ASTM Type II neat from 440 feet bls to land surface.

Photograph 3: BF-3 (Upper Floridan Aquifer Well).

After setting the 14-inch diameter casing, a nominal 14-inch diameter bit advanced the borehole to the top of the upper-most Floridan aquifer production interval at 1,000 feet bls using the mud rotary method. A caliper log was then run prior to installation of 8-inch diameter casing between 300 to 1,000 feet bls. The upper portion of the 8-inch diameter casing was not extended to land surface in order to save on casing costs and so the final well design would accommodate a larger diameter, high capacity pump. The drill stem was used to lower the 8-inch diameter casing into

place between 300 to 1,000 feet bls. ASTM Type II neat cement was then pressure grouted into the annular space behind the 8-inch casing from 1,000 to 300 feet bls after which time it was allowed to set for 8 hours. Once set, the drill stem was "backed off" or unscrewed from the top of the 8-inch diameter casing and removed from the well.

RST then drilled the remaining 200 feet of open hole using a nominal 8-inch diameter bit via the reverse-air method to a total depth of 1,200 feet bls. The well was then air-developed until discharge waters were clear and free of particulates. In May 1993, the Contractor completed construction of the well by installing a permanent 14-inch diameter gate valve and a portable top head flange with monitoring ports, a cement pad, and a security fence.

BF-4S and BF-4M: Upper and Middle (Dual-Zone) Floridan Aquifer Well

BF-4S and BF-4M were constructed between June to July 1993 and are shown in **Figure 3**. This dual-zone well would facilitate aquifer testing and monitoring of two productive horizons: the upper Floridan aquifer (BF-4S) between 1,000 to 1,200 bls and the middle Floridan aquifer (BF-4M) between 1,500 and 1,600 feet bls.

Four concentric steel casings (18-, 12-, 6- and 2-inch diameter) were used to construct BF-4. The Contractor installed an 18-inch diameter pit casing to 30 feet bls. The annulus was grouted to land surface using ASTM Type II neat cement. Mud rotary drilling then advanced an 18-inch diameter borehole to the 440 feet bls into the top of the upper confining unit. A caliper log was then run to calculate cement volumes for grouting operations. Once complete, a 12-inch diameter steel casing was installed to a depth of 440 feet bls. Once in, the casing was pressure grouted using ASTM Type II neat cement from 440 feet bls to land surface.

Photograph 4: BF-4S & BF-4M (Upper and Middle (Dual-Zone) Floridan Aquifer Well).

With a 12-inch diameter casing in place, a nominal 12-inch diameter bit advanced the borehole using the mud rotary method to the top of the upper Floridan aquifer production interval at 1,000 feet bls. A caliper log was run prior to installing a 6-inch diameter steel casing from 1,000 feet bls to land surface. ASTM Type II neat cement was then used to pressure and tremie grout the annular space behind the 6-inch casing from 1,000 feet bls to land surface.

With cement set, reverse-air drilling resumed using a 6-inch nominal bit to a depth of 1,600 feet bls. The drill bit was then extracted from the hole and a caliper log was run over the open-hole interval from 1,000 to 1,600 feet bls. The well was then air-developed thoroughly until the discharge water was clear and free of particulates. Then pea-sized gravel was installed using the 6-inch diameter casing to fill the bottom 100 feet of open-hole in the well. At this point, 2-inch diameter steel casing was lowered from land surface to 1,500 feet bls. ASTM Type II neat cement was then pressure grouted into the annular space behind the 2-inch casing and lifted from 1,500 to 1,200 feet bls. With 2-inch casing cemented in place, a 2-inch nominal bit was used to drill out the basal 100 feet of gravel. At this point there was open hole from 1,500 to 1,600 feet bls. The borehole was then air developed until all discharge water flowed clear for several hours. The 2-inch piezometer (BF-4M) was completed in the middle Floridan aquifer.

A second 2-inch diameter stainless steel piezometer was then hung from the top of the 6-inch diameter casing approximately 20 feet into the annulus between the 6-inch and 2-inch diameter casings previously installed. This annular piezometer was secured by filling the upper 10 feet of annular space with ASTM Type II neat cement. Now secure, a 2-inch piezometer (BF-4S) monitors the upper Floridan aquifer between 1,000' to 1,200' bls. The two, 2-inch inner diameter (ID), stainless steel piezometers were equipped with stainless steel ball valves. They facilitate monitoring of water levels and quality within the two aforementioned intervals.

SITE GEOLOGY

Strata encountered during drilling of the pilot-hole (BF-1) range in age from Holocene (most recent) to early Eocene (oldest). These lithostratigraphic units generally followed those recognized by Reese (1994), Fish (1988) and Reese and Cunningham (1999). The units, in descending order, are as follows: the Undifferentiated Pleistocene series, the Ochoppee Limestone (Pliocene), the Peace River and Arcadia Formations (Miocene), the Avon Park (middle Eocene) and the Oldsmar Formation of early Eocene age. **Figure 4** presents a hydrostratigraphic summary of the site, including depths, lithostratigraphic unit, geologic age, and lithology. The stratigraphic interpretation was derived primarily from formation samples and geophysical logs collected in pilot hole BF-1. Cuttings were described twice, once by the District site geologist, then again by the Florida Geologic Survey (FGS), both sets are provided in **Appendix A**. An electronic FGS version can be downloaded directly from FGS's Internet site at http://www.dep.state.fl.us/geology/gisdatamaps/litholog.htm.

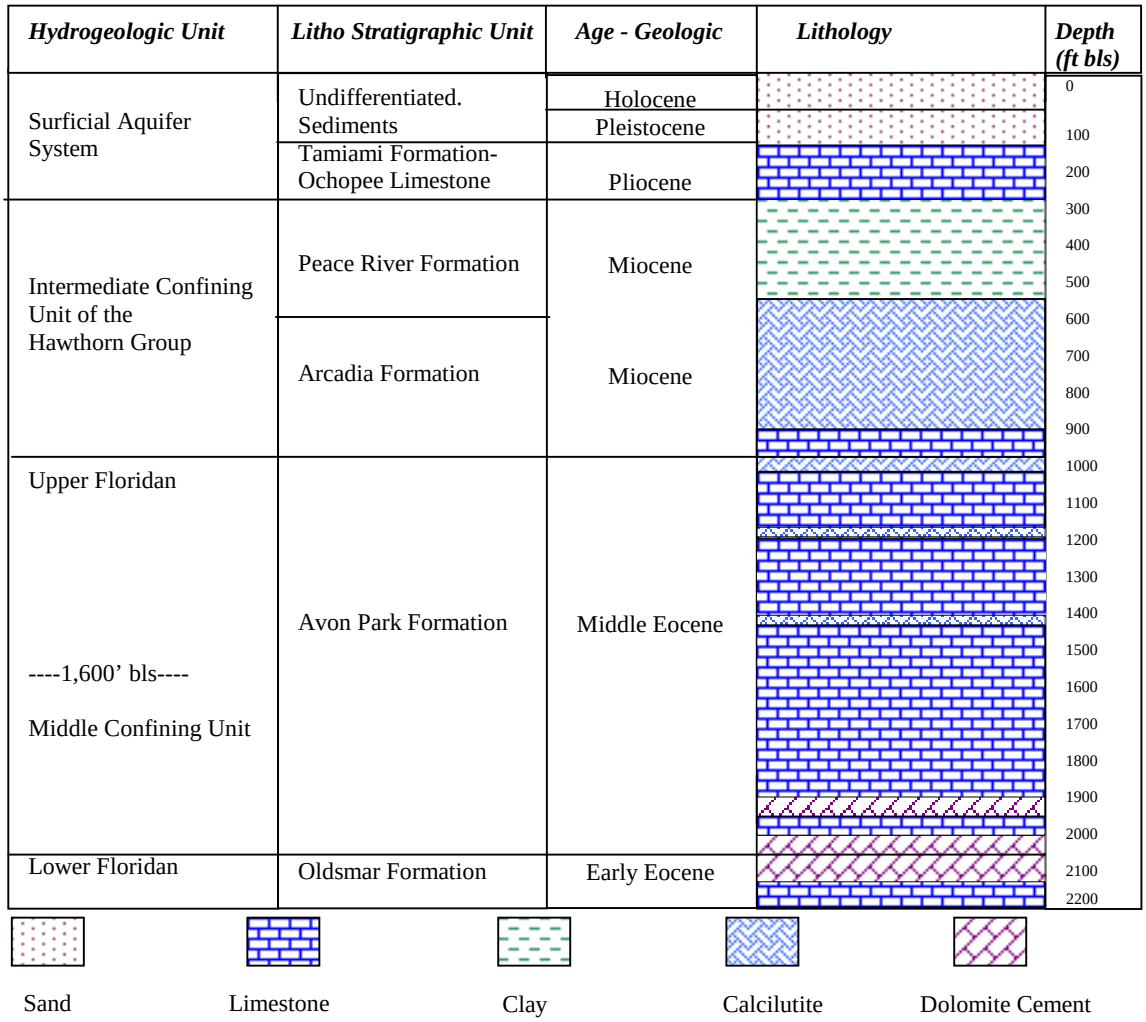

Figure 4. Hydrostratigraphic Summary Diagram.

Undifferentiated Pleistocene Series

From land surface to a depth of approximately 153 feet bls, the lithology consists primarily of white to tan and light orange oolitic limestone and sand of the undifferentiated Pleistocene series. This Pleistocene series consists of the Pamlico sand, Miami Limestone the Anastasia and the Key Largo Formations (Fish, 1988). At 153 feet bls, there was a noticeable change in lithology as the drill bit began to chatter and its penetration slowed. The lithology changed from a sandy, oolitic texture to a well indurated, harder limestone. From 153 to 361 feet bls, the lithology was primarily a mixed marine limestone, quartz sand and sandy limestone. These deposits were identified as equivalents of the Ochopee Limestone, member of the Tamiami Formation of Pliocene age.

Miocene

Hawthorn Group (Peace River and Arcadia Formations)

The Hawthorn Group, as defined by Scott (1988), is divided into two lithostratigraphic units. In descending order, they are the Peace River and Arcadia Formations. The Peace River Formation was defined as having a predominance of siliclastic material (Scott, 1988). At the C-13 site, the Peace River Formation is a light olive gray, clay rich quartz sand, sandstone, and mudstone found between 361 feet to 570 feet bls. The lower Arcadia Formation was distinguishable at this site as a yellowish gray, low permeability calcilutite between 570 and 975 feet bls. The base of the Arcadia Formation is marked by a significant increase of natural gamma emissions as evidenced on the gamma ray log in **Appendix B.**

Oligocene

Suwannee Limestone

The Suwannee Limestone (early Oligocene age) was not definitively identified at the site. It is generally described as white, tan, light brown, yellowish gray and green limestone (calcilutite and carbonaceous mud), with benthic forams, crinoid stems, and mollusks as well as shell and phosphatic sand. The FGS cutting descriptions **(Appendix A)** make no mention of an occurrence of a Suwannee Limestone. This notable absence is probably based on an interpretation made using Scott's (1988) definition. Scott places the base of the Hawthorn Group at the base of the last occurrence of a sandy, variably phosphatic carbonate. Reese (review comments, March 2003) also places the phosphatic zone in the Hawthorn Group.

Upper Eocene

Ocala Limestone

The Ocala Limestone is not present in most of Miami-Dade and Broward counties (Miller, 1986) and was not present at the C-13 site. However, this geologic unit is present in western Broward, northernmost Monroe, northwestern Dade and Collier counties and reaches thickness of 150 to 200 feet (Reese, 1994).

Middle Eocene

Avon Park Formation

The top of the Avon Park Formation was identified at 975 feet bls. The first occurrence of the benthic foraminifera *Dictyoconus sp*. was found at 1,034 feet bls. This along with faster drilling rates, color change from grey to pale orange, and abundant marine fossils provided evidence of an unconformity. The top of the rocks of Eocene age may represent an unconformity in the study area. Generally this top can be readily determined using gamma ray geophysical logs and is closely associated with the top of the Floridan aquifer (Reese, 1994).

The Avon Park Formation is approximately 1,100 to 1,200 feet thick in the study area and is composed predominantly of micritic or chalky to fine-grained limestone with low permeability. This geologic unit is characterized as having relatively low natural radioactivity, generally less than 20 to 30 American Petroleum Institute (API) standard units on the gamma ray log. Total porosity can be as high as 50 percent at or near the top of the formation and gradually decreases with depth (Reese, 1994). The base of the Avon Park was identified in BF-1 as 2,074 feet bls.

Lower Eocene

Oldsmar Formation

The top of the Oldsmar Formation is often difficult to identify because of a lack of diagnostic microfossils. It is predominantly comprised of micritic limestone in Broward County (Reese, 1994). The top of the Oldsmar in south Florida is often identified based on the presence of a hard, crystalline dolostone unit that generally occurs below a depth of 2,000 feet bls in southeast Florida. This unit is identified on geophysical logs by increased gamma ray counts and resistivity values characteristic of dolomite. If these criteria are used, the Oldsmar could be identified at 2,074 feet bls at the site corresponding to the occurrence of a well indurated, crystalline dolostone.

SITE HYDROGEOLOGY

Two major aquifer systems underlie most of southeast Florida, the SAS and FAS. The latter is the primary focus of this report and the field testing program. These aquifer systems are composed of multiple, discrete aquifers separated by low permeability "confining" units. **Figure 4** shows a generalized lithologic and hydrogeologic section underlying the C-13 site. **Figure 5** shows the location of the C-13 site relative to nearby offset well sites in the area as well as the cross-sectional line A-A'. The third dimensional subsurface display of that cross sectional line is illustrated in **Figure 6** which shows the top of the FAS to be flat with the Plantation Injection well and the Ft. Lauderdale Fiveash ASR well.

Surficial Aquifer System

The SAS extends from land surface to a depth of 361 feet bls at the site. It comprises all materials from the water table to the top of the intermediate confining unit. These materials are primarily sandstone, sand, shell, clayey sand and cavity-riddled limestone ranging in age from Miocene to Holocene (Fish, 1988). The top of the system may be considered to be land surface because virtually all of Broward County formerly was seasonally flooded (Fish, 1988). Sediments of the SAS have a wide range of permeability, and locally may be divided into one or more aquifers separated by less permeable or semi-confining units. The Biscayne aquifer is the best known and contains the most permeable materials of the SAS. Another permeable unit, the grey limestone aquifer, is approximately 100 feet thick in western Broward County but thins to the east and ultimately pinches out near the Florida Turnpike. It is not present at the site. Since the focus of this exploratory drilling was the Floridan aquifer, the individual permeable portions of the SAS were not identified or tested.

Intermediate Confining Unit

The intermediate confining unit varies in thickness from about 600 to 1,050 feet in Broward and Miami Dade counties (Reese, 1994). It was identified between 361 to 975 feet bls, and is 614 feet thick at the site. The geologic units in the intermediate confining unit generally include the Hawthorn Group and Suwannee Limestone, but locally the uppermost sediments of the unit can be part of the Miocene-Pliocene Tamiami Formation (Fish and Stewart, 1991). The lithology of the intermediate confining unit is variable and includes clay, silt, fine sand, sandstone, siltstone, and limestone.

Floridan Aquifer System

The FAS is defined as a vertically continuous sequence of permeable carbonate rocks of Tertiary age that are hydraulically connected in varying degrees (Miller, 1986). It ranges in thickness from 2,500 to 3,000 feet in southeastern Florida. Its top varies from 900 to more than 1,100 feet bls in Broward county (Miller, 1986, pls. 26 and 27). The top was identified in the pilot hole as 975 feet bls based on the breakout from a transition from clays to limestones and the first occurrence of flow into the borehole while drilling. The portion of the FAS drilled, tested, and described at the C-13 site includes permeable units of the Avon Park and the Oldsmar Formations.

Figure 5. Location of C-13 Study Area Relative to Other Nearby Wells and Cross Sectional Line A-A'.

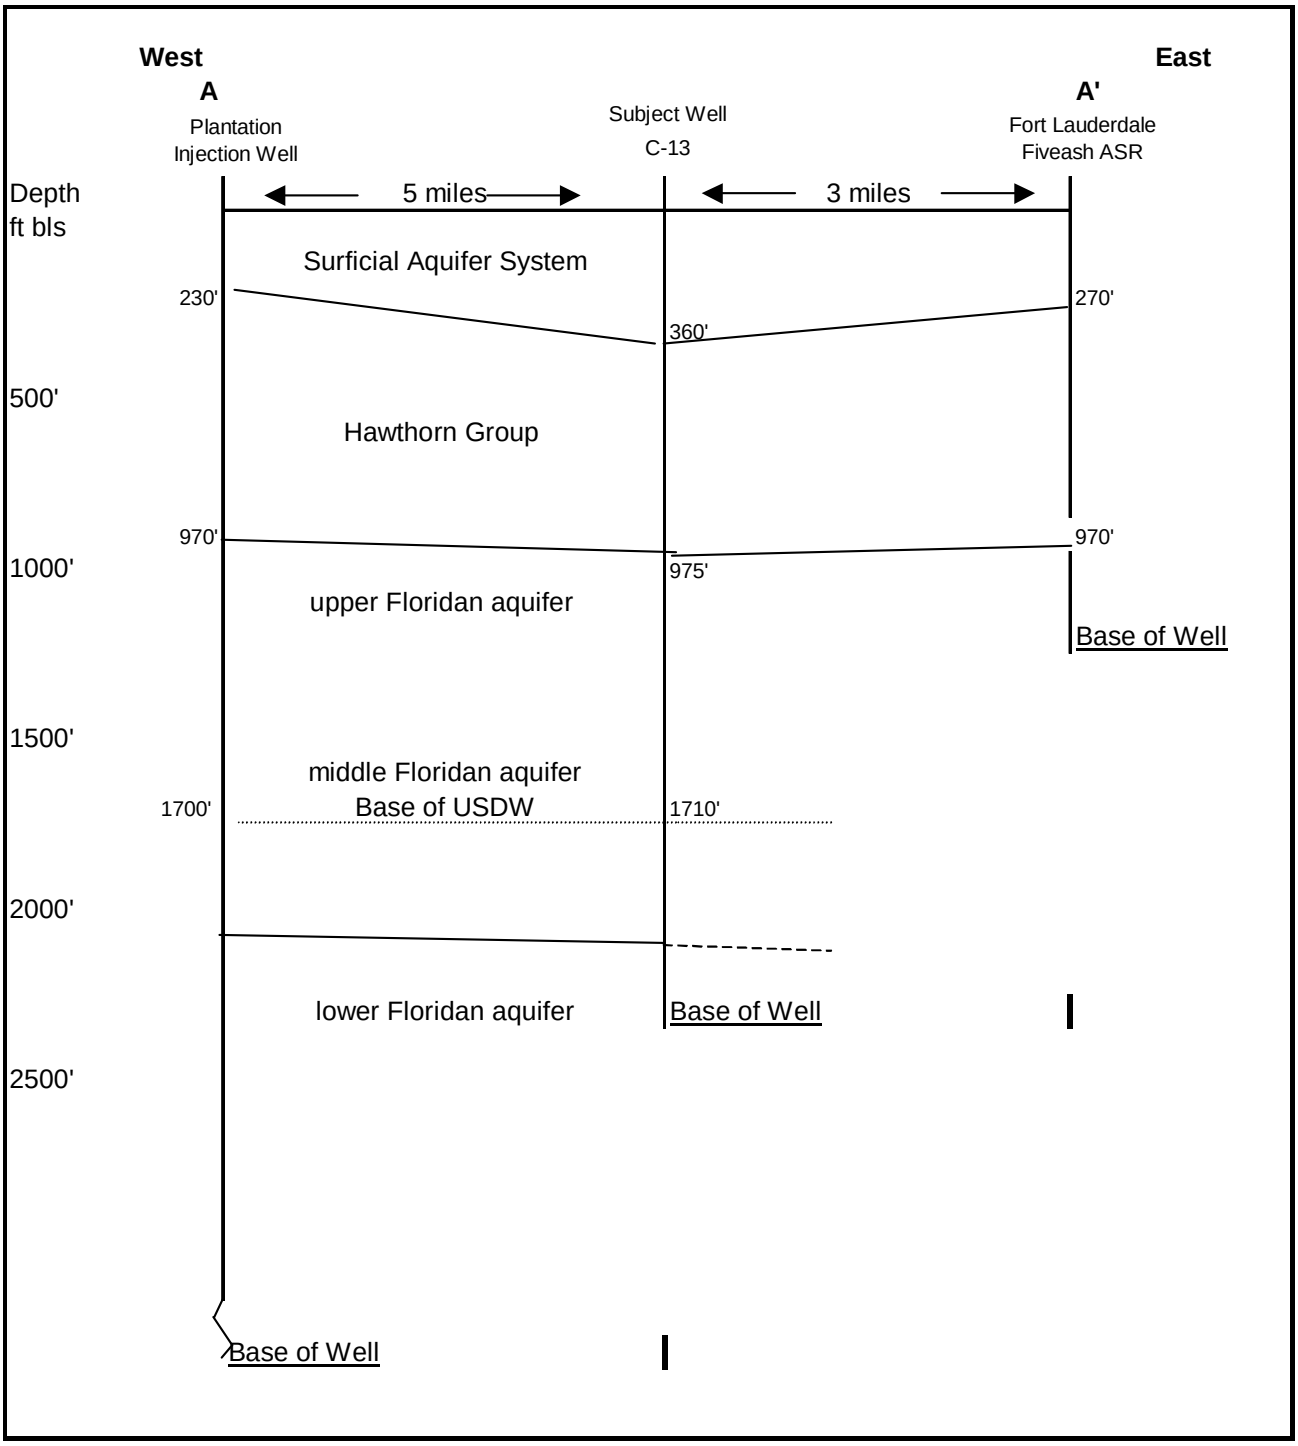

Figure 6. Hydrogeologic Cross Section.

The FAS can be divided into three hydrogeologic units: the upper Floridan aquifer, the middle semi-confining unit, and the lower Floridan aquifer (Reese, 1994). Discrete flow zones at the site were identified using information garnered from drilling characteristics, cuttings descriptions, geophysical logs (primarily flow meter, temperature, caliper, resistivity, and downhole video logs), packer tests, aquifer performance tests, and water quality variations with depth. This combined information painted a comprehensive picture of the system described below.

Upper Floridan Aquifer

The top of the Floridan aquifer system was defined as 975 feet bls, however the first flow zone penetrated at the site was identified in the upper Floridan aquifer between 1,000 to 1,034 feet bls. The flow zone is within the unconformity between the base of the Suwannee Limestone and the top of the Avon Park Formation. This interval was tested with a packer assembly (Packer Test No. 6) at a rate of 65 gpm resulting in a specific capacity of 18.57 gallons per minute per foot (gpm/ft). Other evidence observed for a flow zone included:

- flow log showed evidence of flow;
- a small temperature increase (0.1 degree F) on the temperature log;
- a sudden increase in borehole size (1,024-1,026 feet bls) on the caliper log;
- drill bit penetration increased notably; and;
- artesian formation water flowed from the well directly after drilling out from under casing set at 1,000 feet bls.

The predominant flow zone found in the pilot hole within the upper Floridan aquifer was between 1,146 to 1,150 feet bls (depth from geophysical logs). This thin interval is 112 feet below the top of the Avon Park Formation in the section. It was not packer tested, but was included in the open-hole portion of the well pumped in Aquifer Performance Test Number 2 (APT-2). Analyses of time-drawdown data from APT-2 resulted in a transmissivity of 120,000 gallons per day/foot (gpd/ft) across the open-hole interval between 1,000 to 1,200 feet bls. This thin flow zone appears to be a solution feature as evidenced by the following pieces of information:

- flow log showed evidence of flow;
- temperature of water rose abruptly from 65 to 66.5 degrees Fahrenheit;
- caliper probe opened significantly when pulled across it;
- density pad lost contact with the borehole wall; and,
- drill rate increased notably through it.

A second (middle) flow zone was identified between 1,500 and 1,600 feet bls at the base of the upper Floridan aquifer. Flow was not particularly strong across this interval and was not detected on geophysical logs or by drilling characteristics. Here, permeability was identified in on a packer test where the interval was pumped at a flow rate of 64 gpm. This confirmed water enters the borehole across this interval. Specific capacity was calculated to be 13.4 gpm/ft. Transmissivity was also derived from APT-1 as 70,260 gallons per day per foot (gpd/ft). Water quality in this interval, sampled during APT-1 and APT-2, was less saline than in the upper Floridan aquifer (chloride concentration of 2,800 milligrams per liter (mg/L) versus 4,218 mg/L, respectively). A video log across this interval provided no visible evidence of a large solution feature or of flow. It appears to originate from intergranular porosity rather than point-specific sources seen in solution features. The base of the upper Floridan aquifer was identified 1,600 feet

bls at the site based on the flow logs that indicate flow stopped entering the borehole below this point.

Middle Semi-Confining Unit

The middle semi-confining unit was identified between 1,600 and approximately 2,074 feet bls at this site. This interval is composed primarily of low permeability packstones and grainstones. No other flow zones were identified within the semi-confining unit. The base of the Underground Source of Drinking Water (USDW) (10,000 mg/L total dissolved solids (TDS)) was found 1,710 feet bls as seen on the dual-induction log (drop from 5 to 3 Ohm-meters). This was collaborated by packer tests 3 and 4 (see ***Hydrogeologic Testing*** section) where TDS concentrations were measured as 31,300 and 8,920 mg/l, respectively on either side of the boundary.

Lower Floridan Aquifer

Reese (1994) interpreted the occurrence of a crystalline dolomite as a marker for the top of the lower Floridan aquifer, which is placed in the Oldsmar Formation. This dolomite and the top of the lower Floridan aquifer were identified at 2,074 feet bls in the pilot hole. Between 2,074 and 2,170 feet bls, the bit penetrated alternating layers of crystalline dolomite and limestone (packstone). The dolomite was hard and had little signs of permeability until 2,124 feet bls, when dolomitic cavities and associated flow zones were encountered as evidenced by:

- the bit dropped suddenly through at least two, 2-foot high cavities;
- the caliper log indicted a sudden and large increase in borehole size between 2,124-2,126 feet bls, 2,136-2,141 feet bls and between 2,146-2,147 feet bls;
- conductivity of recovered reverse-air water quality samples increased from 4,640 to 8,250 mmhos somewhere between 2,121-2,148 feet bls; and,
- a packer test pumped at a rate of 110 gpm between 2,120 and 2,142 feet bls resulted in a specific capacity of 550 gal/min/ft, the highest tested in the entire pilot hole.

Below 2,170 feet bls was limestone (packstone) which persisted to the total depth of the well (2,280 feet bls). No additional flow zones were detected below the base of the dolomite. Although the well terminated at 2,280 feet bls, the Oldsmar Formation probably extends down another 900 to 1,000 feet (Reese, 1994). At the base of Oldsmar Formation is the Boulder Zone (local name), which is predominantly dolomite and contains massively bedded cavernous or fractured dolomite of high permeability and dense, recrystallized dolomite of low permeability. The Boulder Zone was not penetrated at this site.

HYDROGEOLOGIC TESTING

Information was collected during the drilling and testing program to determine the lithologic, hydraulic, and water quality characteristics of the FAS at the site. The formation testing program at the site included lithologic examination, observations while drilling, geophysical surveys, packer pumping tests, APTs, water quality sampling, and water level measurements. Raw data is contained in the appendices of this report.

Formation Fluid Sampling

Water quality samples were collected while reverse-air drilling BF-1 through the FAS at approximately 30-foot intervals from 1,008 feet bls to the total depth of the pilot hole at 2,280 feet bls. A Hydrolab multi-parameter probe measured field parameters on each sample, which included temperature, specific conductance, and pH. A field titration method (Hach® Kit) measured chloride concentrations. District staff collected filtered and unfiltered water directly from the discharge point into a Teflon bailer. Samples were then preserved and immediately placed on ice in a closed container and transported to the District's water quality laboratory. The samples were then analyzed for major ions using Environmental Protection Agency (EPA) and/or Standard Method procedures (SFWMD, Comprehensive Quality Assurance Plan, 1995).

A graph of chloride concentrations and specific conductivity as a function of depth is presented in **Figure 7**. Results of water quality analyses are listed in **Table 2**. Chloride concentrations remained relatively consistent (approximately 4,000 mg/L) from 1,008 to 1,813 feet bls. At a depth of approximately 1,845 feet bls, chloride concentration increased to approximately 6,100 mg/l, then jumped to 9,500 mg/l at 1,970 feet bls.

The chloride concentration then decreased noticeably from 2,090 feet bls (4,640 mg/L) only to increase again to 17,250 mg/l at approximately 2,154 feet bls, which is where it remained to the last sample collected at 2,218 feet bls.

Geophysical Logging

Geophysical logging was conducted in the pilot holes after each stage of drilling and prior to casing installations. Schlumberger was contracted to run the primary set of geophysical logs across the entire open-hole section of the FAS in BF-1. These were run directly after reverse-air drilling in a water filled borehole and included: caliper, natural gamma ray, spontaneous potential, dual induction, sonic, compensated neutron and density, flow meter, temperature, fluid resistivity and video logs. The resulting logs provide a continuous record of the physical properties of the subsurface formations and their contained fluids. These logs assisted in the interpretation of lithology, provided estimates of permeability, porosity, bulk density, and resistivity of the formations. In addition, the extent of confinement of discreet intervals and identification of permeable zones can be discerned from the logs. Geophysical log traces for several of the logging runs were digitized and are included as **Appendix B**. Original geophysical logs are archived at the District while the digital traces are available through the District's on-line corporate database (DBHydro) Browser at the following Internet address:

http://sonar.sfwmd.gov:7777/pls/dbhydro_pro_plsql/show_dbkey_info.main_page.

Table 2. Reverse-Air Drilling Field Water Quality Results BF-1.

Packer Tests

Methods

The following methods were used to conduct individual packer tests in well BF-1 and are standard operating procedures at the District.

- Using a 4.5" inner diameter (O.D.) drill stem, lowered packer assembly to the interval selected for testing based on geophysical and lithologic log data.
- Set and inflated packers and opened the ports between the packers to the test interval.
- Installed a submersible pump from a depth of 60 feet to 120 feet below the drill floor with a pumping capacity of 200 gallons per minute (gpm).
- Installed two 50-psig pressure transducers inside the drill pipe and one 10-psig transducer in the annulus.
- Purged a minimum of three drill-stem volumes.
- Monitored pressure transducer readings and field water quality parameters (e.g., temperature, specific conductance, and pH) from the purged formation water until stable. The water quality parameters and transducer readings were used to determine the quality of isolation of the packed-off interval.
- Performed constant rate drawdown test once the interval was effectively isolated and recorded water levels.
- Collected formation water samples for laboratory water quality analyses per SFWMD's Quality Assurance, Quality Control (QA/QC) protocol.
- Reconfigured recorders to recovery in logarithmic time.
- Turned off pump.
- Recorded recovery data until water levels returned to static conditions.

A hydrolab multi-parameter probe measured field parameters including temperature, specific conductance, and pH on each sample. Chloride concentrations were determined using a field titration method (Hach® Kit).

Results - Packer Tests

Packer pumping tests were conducted during drilling operations to isolate six selected FAS zones in pilot well BF-1. The purpose of these tests was to gain water quality and production capacity data on discrete intervals and to establish the depth of the 10,000 mg/L TDS interface to determine the base of the USDW. **Table 3** lists static water levels, total pumping time, and hydraulic results for each of the packer tests. **Table 4** lists the water quality parameters determined from analyses of samples taken during packer tests. **Appendix C** provides tables summarizing field results for each of the six packer tests. Friction was calculated using a 4.5-inch inside diameter (I.D.) steel drill pipe.

Packer Test Number	Interval (ft. bls)	Thickness (feet)	Pumping Rate (gpm)	Actual/*Corrected Drawdown (feet)	Static Water Level (feet above land surface)	Total Pumping Time (min)	Corrected Specific Capacity (gal/min/ft)
1	2120-2142	22	110	14.2 / 0.2	-1.6	200	550.00

Table 4. Packer Pumping Tests - Water Quality Summary.

Base of Underground Source of Drinking Water (USDW)

The base of the USDW is defined by the Florida Department of Environmental Protection as the depth to which water containing a TDS concentration of less than 10,000 mg/L extends. The concentration of TDS in water sampled between 1,726 feet and 1,772 feet bls during Packer Test No. 3 was 31,300 mg/L, while Packer Test No. 4, sampled between 1,644 and 1,690 feet bls, had water with TDS concentration of 8,920 mg/L. This places the USDW between these two intervals or at approximately 1,710 feet bls.

Packer Test No.1 (2,120 to 2,142 feet bls):

The purpose of this packer test was to determine the hydraulic properties and water quality characteristics of a productive interval within the lower Floridan aquifer. It was conducted on February 17, 1993, when a dual packer assembly isolated an interval between 2,120 and 2,142 feet bls in pilot well BF-1. This interval was pumped for 200 minutes at an average discharge rate of 110 gpm. The static water level prior to pumping was measured as –1.6 feet relative to ground level. The maximum measured drawdown while pumping was approximately 18 feet, approximately 14 feet of that is estimated friction loss. A friction loss corrected specific capacity of 550 gpm/ft was estimated**. Figure 8** is a semi-log plot of the time versus residual drawdown (t/t') data collected during the recovery phase of the test. At the end of the recovery phase, the static water level rose to the initial height of –1.6 feet (ground level). Shortly before the end of the drawdown phase, a composite water sample was taken from the discharge point and field water quality parameters measured. Chlorides and TDS concentrations in water sampled from the zone were 17,103 mg/L and 33,900 mg/L, respectively.

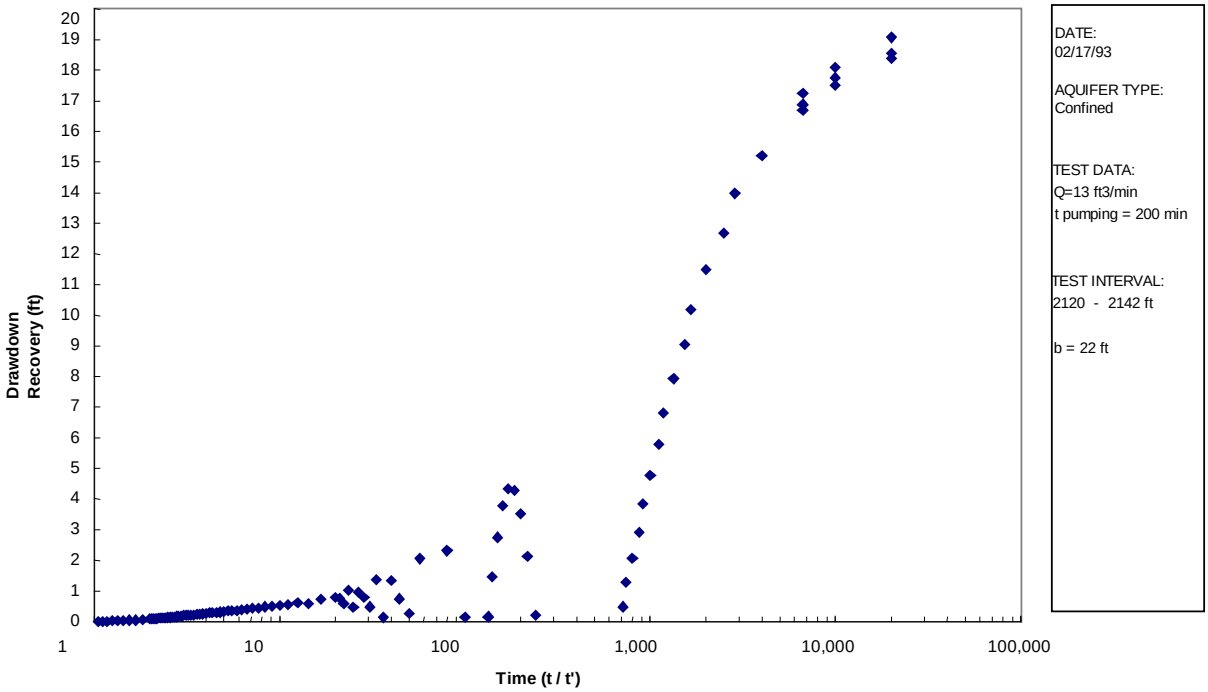

Figure 8: Packer Test 1, Recovery Data (2,120-2,142 feet bls).

Packer Test No. 2 (2,078 – 2,088 feet bls):

Packer Test No. 2 was conducted on February 19, 1993 and isolated an interval between 2,078 and 2,088 feet bls in BF-1. The test was conducted by lowering a dual-packer assembly to isolate an interval between 2,078 and 2,088 feet bls in pilot well BF-1. This interval was pumped for 1,046 minutes at an average discharge rate of 4.5 gpm. The static water level prior to pumping was measured as –0.4 feet relative to ground level. The maximum measured drawdown while pumping was approximately 64 feet, zero feet of that was friction loss because of the very low flow rate. A friction loss corrected specific capacity of 0.07 gpm/ft was calculated. **Figure 9** is a semi-log plot of the time versus residual drawdown data collected during the recovery phase of the test. Chloride and TDS concentrations in water sampled from the zone were 18,972 mg/L and 34,300 mg/L, respectively.

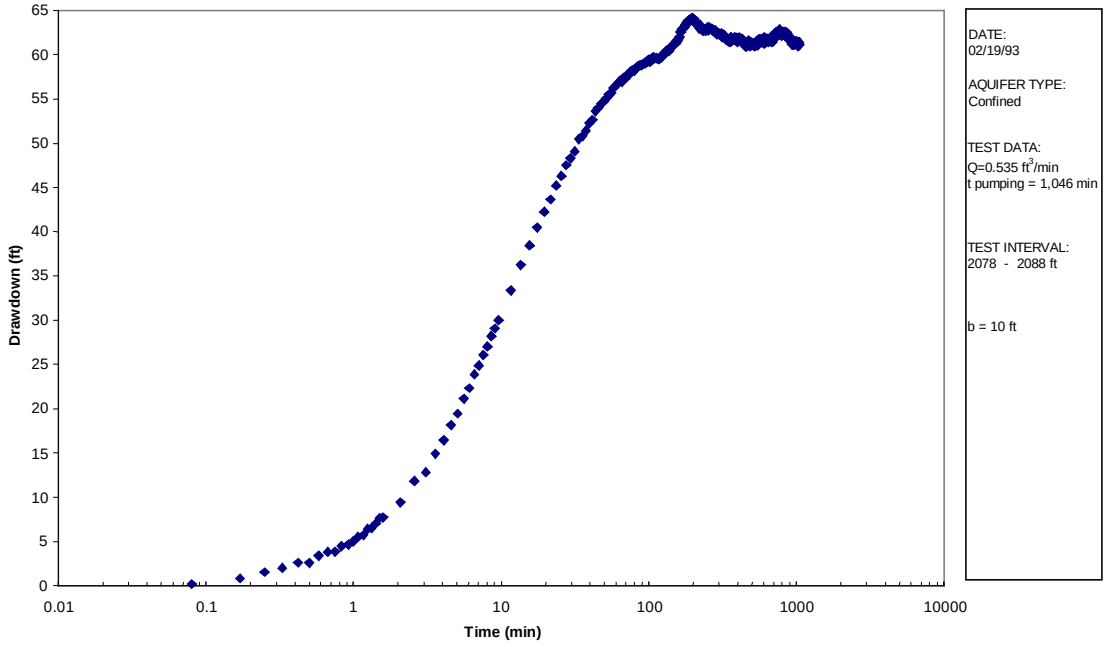

Figure 9. Packer Test Number 2, Recovery Data (2,078-2,088 feet bls).

Packer Test No. 3 (1,726 – 1,772 feet bls):

Packer Test No. 3 was conducted on February 23, 1993 and isolated the interval between 1,726 and 1,772 feet bls in well BF-1. The test was conducted by pumping this interval for 145 minutes at a rate of 74 gpm. The static water level was measured at 3.0 feet above ground level at the site. The maximum drawdown was 22 feet and the friction loss corrected specific capacity calculated as 5.52 gpm/ft. **Figure 10** is a semi-log plot of the time versus residual drawdown data collected during the recovery phase of the test. Chlorides and TDS concentrations in water sampled from the zone were 17,268 mg/L and 31,300 mg/L, respectively.

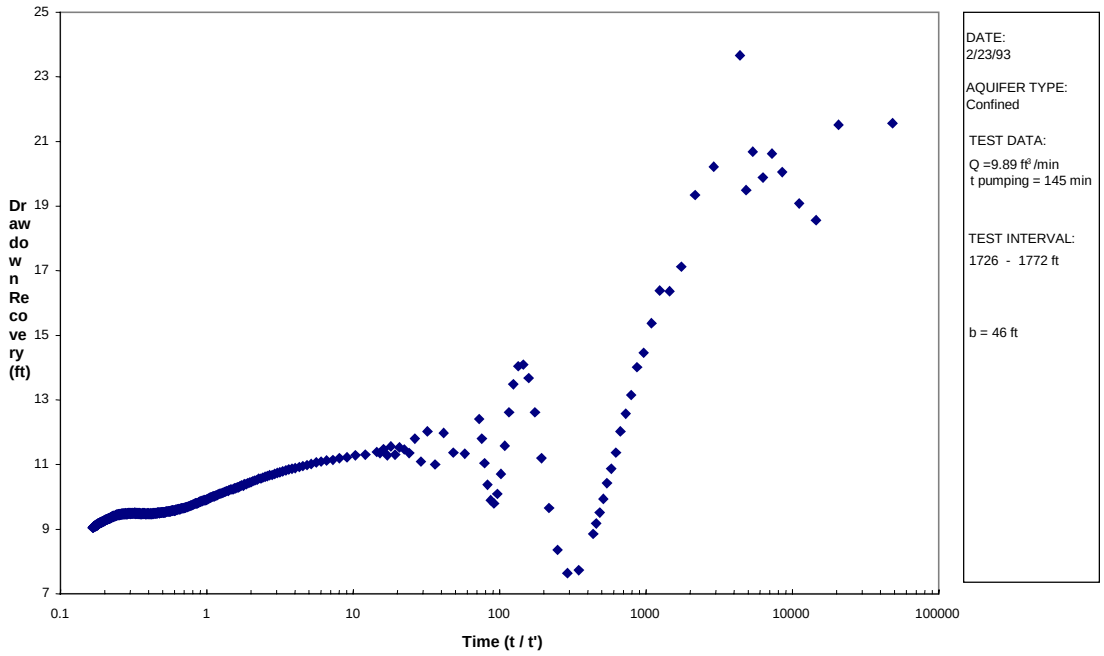

Figure 10. Packer Test Number 3, Recovery Data (1,726-1,772 feet bls).

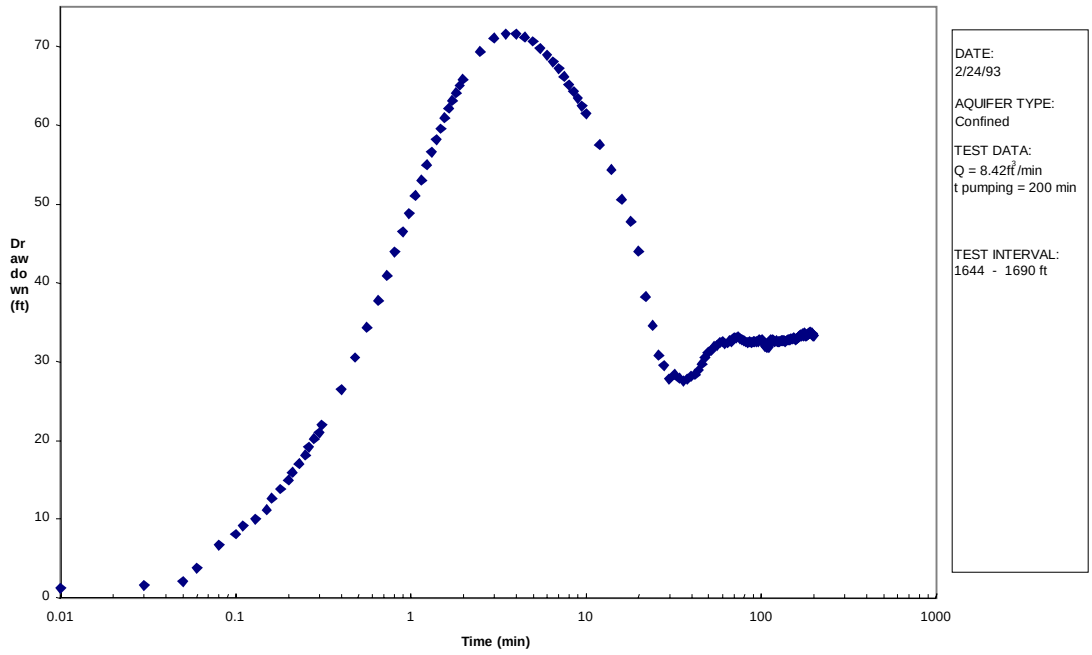
Packer Test No. 4 (1,644 – 1,690 feet bls):

Packer Test No. 4 conducted on February 24, 1993, and isolated an interval between 1,644 and 1,690 feet bls in well BF-1 using a dual-packer assembly. The test was conducted by pumping this interval for 200 minutes at an average rate of 63 gpm. Static water level measured 29.0 feet above ground level. The maximum measured drawdown was 33 feet and the friction loss corrected specific capacity calculated as 2.31 gpm/ft. **Figure 11** is a semi-log plot of the time versus residual drawdown data collected during the recovery phase of the test. Chlorides and TDS concentrations in water sampled from the zone were 4,695 mg/L and 8,920 mg/L,



respectively.

Figure 11. Packer Test Number 4, Recovery Data (1,644-1,690 feet bls).

Packer Test No. 5 (1,494 – 1,540 feet bls):

Packer Test No. 5 conducted on February 26, 1993 and isolated an interval between 1,494 and 1,540 feet bls in BF-1. The test was conducted by pumping this interval for 200 minutes at an average rate of 64 gpm. The static water level was measured as 29 feet above ground level. The maximum measured drawdown was 10 feet and the friction loss corrected specific capacity calculated as 13.42 gpm/ft using a friction loss of 5.23 feet. **Figure 12** is a semi-log plot of the time versus residual data collected during the recovery phase of the test. Chlorides and TDS concentrations in water sampled from the zone were 4,167 mg/L and 8,340 mg/L, respectively.

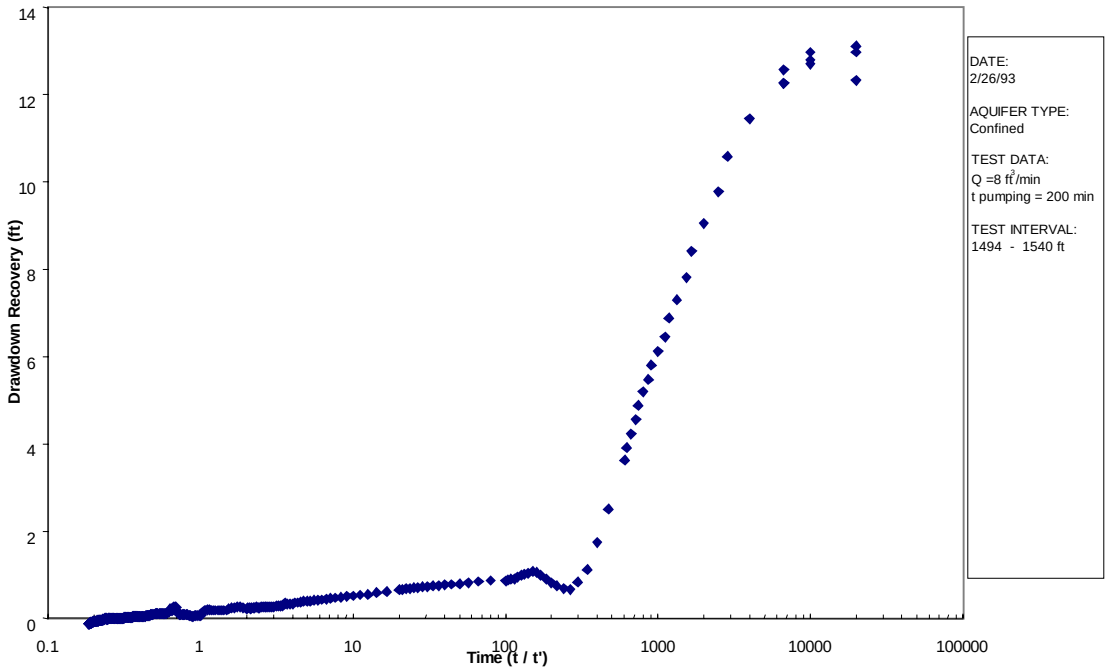


Figure 12. Packer Test Number 5, Recovery Data (1,494-1,540 feet bls).

Packer Test No. 6 (1,000 – 1,031 feet bls):

Packer Test No. 6 was conducted on March 31, 1993 and isolated an interval between 1,000 and 1,031 feet bls in BF-1 with a dual packer assembly. The test was conducted by pumping this interval for 210 minutes at an average rate of 65 gpm. The static water level was measured as 31 feet above ground level. The maximum measured drawdown was 7 feet and the friction loss corrected specific capacity calculated as 18.57 gpm/ft. **Figure 13** is a semi-log plot of the time versus residual drawdown data collected during the recovery phase of the test. Chlorides and TDS concentrations in water sampled from the zone were 3,915 mg/L and 7,730 mg/L, respectively.

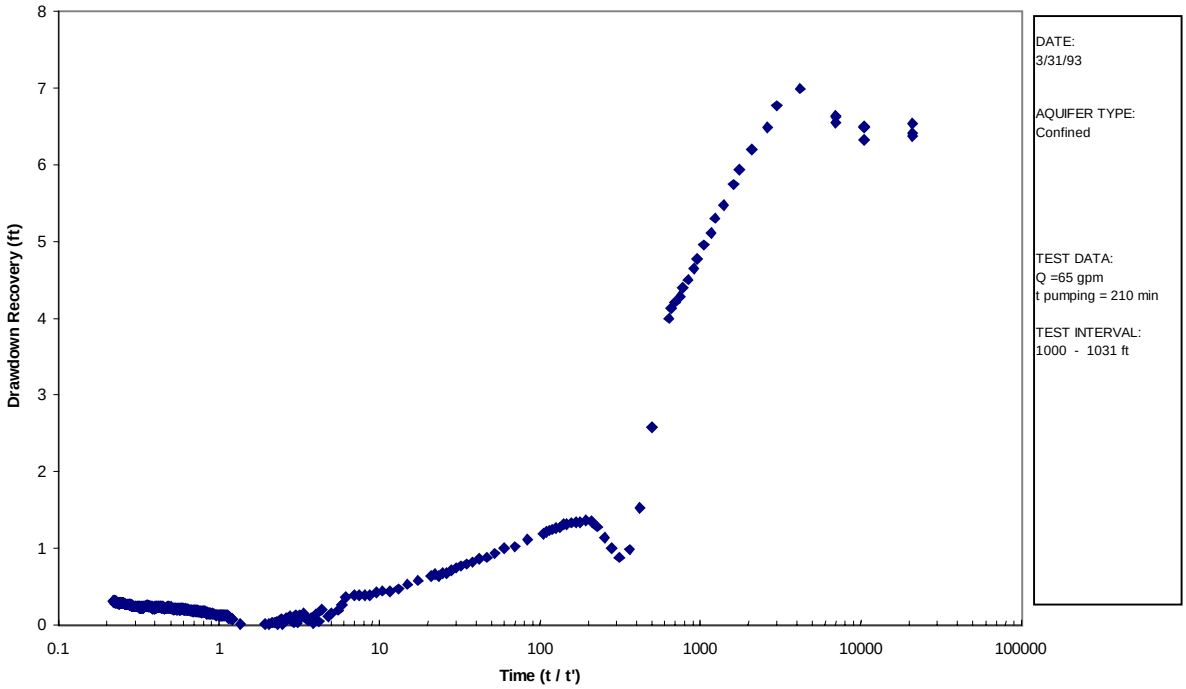

Figure 13. Packer Test Number 6, Recovery Data (1,000-1,031 feet bls).

Aquifer Performance Testing

Two APTs were conducted at the site to evaluate subsurface hydraulics and water quality characteristics within the FAS. The results of these tests, including interval tested, static water level, maximum drawdown, discharge rate (Q), transmissivity, storage coefficient, and analytical methods are listed in **Table 5**. It should be noted that both APTs were attempted directly after well construction was completed in 1993, but only APT-1 was successful at that time. District staff finally returned to the site in June 1997 to test the upper-most Floridan flow zone (APT-2) again, this time successfully. A 10-inch diameter submersible pump was installed in the test-production well with the pumping bowl set approximately 100 feet bls. A 12-inch circular orifice weir with a 6-inch orifice plate was used to measure the discharge rate during pumping, verified by an in-line flowmeter. Pressure transducers were installed on/in the test-production well and all monitor wells at the site and were connected to a datalogger during the drawdown recovery periods of the aquifer performance tests. Further details on both tests are summarized below.

APT	Interval (ft bls)	Transmissivity (gal/day/ft)	Storativity	Leakance (Gal/ day Per ft^3)	Q avg (gpm)	Maximum Drawdown (feet)	Cl (mg/L)	TDS (mg/L)
1	1,500-1,600	70,259	5.89E-05	2.22 E-03	1,070	9.5	2,800	5,000
2	1,000-1,200	119,600	3.70E-04	1.52 E-03	990	6.1	4,218	8,360

Table 5. Aquifer Performance Test Results

APT-1: Middle Floridan aquifer:

On October 17, 1993, APT-1 was conducted in the open-hole interval between 1,500 to 1,600 feet bls. This APT consisted of pumping well BF-2 for 72 hours at a relatively constant discharge rate of 1,070 gpm, while monitoring water levels in all other wells. The static water level in BF-2 was 32.9 feet above ground level prior to the initiation of pumping. Aquifer parameters were computed from time-drawdown data collected during pumping and recovery from monitoring well BF-4M completed in the same zone as BF-2. BF-4M is located 433 feet from the pumping well. The Hantush (1960) leaky solution provided the "best fit" to the time-drawdown data. **Figure 14** is a log/log plot of drawdown versus time for the tested interval and the Hantush (1960) solution.

Figure 15 illustrates water level responses in the upper and lower FAS flow zones (BF-4S and BF-1, respectively) in response to pumping the middle Floridan aquifer (BF-4M). Water levels in the upper flow zone (BF-4S) decreased approximately 0.25 feet after 4,000 minutes of pumping while those in the lower flow zone had no discernable decline over the same period. The changing levels in this lower Floridan zone is attributed to tidal rather than pumping responses based on findings from the second APT (discussed later). These results indicated that the interval between the upper and middle zones was "leaky-confining" whereas the interval between the middle and lower zones exhibited more substantial confinement.

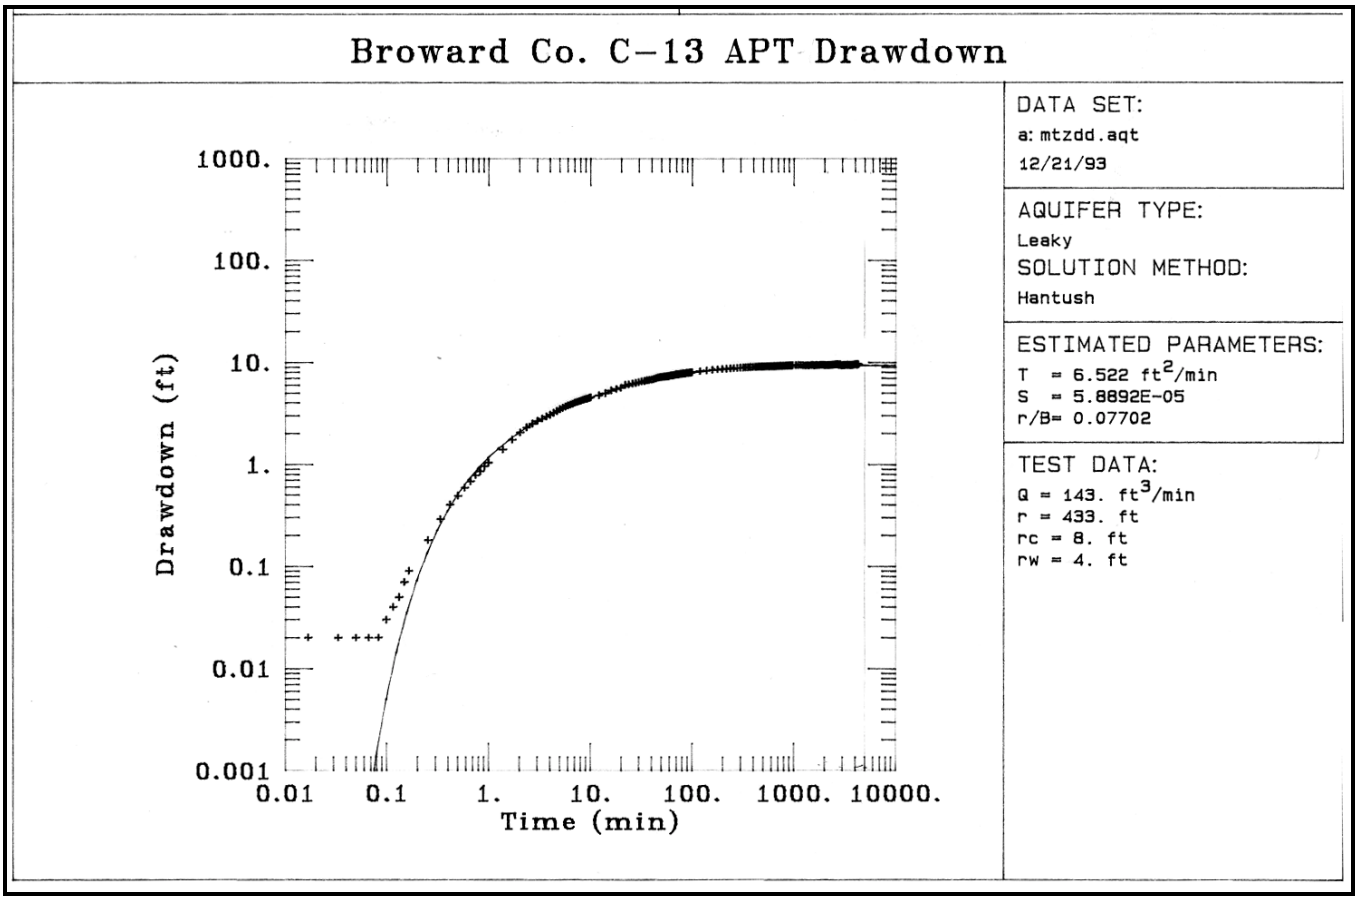

Figure 14. APT-1, Log/Log Plot of Drawdown vs. Time for Monitor Well BF-4M (Middle Flow Zone).

Before pumping stopped, District staff reconfigured the dataloggers to record the recovery data. The submersible pump was then shut off and water levels allowed to recover to static condition. The recovery phase of the APT continued for 72 hours, ending October 21, 1993. The recovery time-drawdown data and Theis straight-line recovery analysis are shown in **Figure 16.** Analyses of the recovery data from this APT produced similar hydraulic results when compared to the drawdown analysis. Electronic copies of the original drawdown and recovery data for the APT are archived and available for review at the District's headquarters in West Palm Beach, Florida.

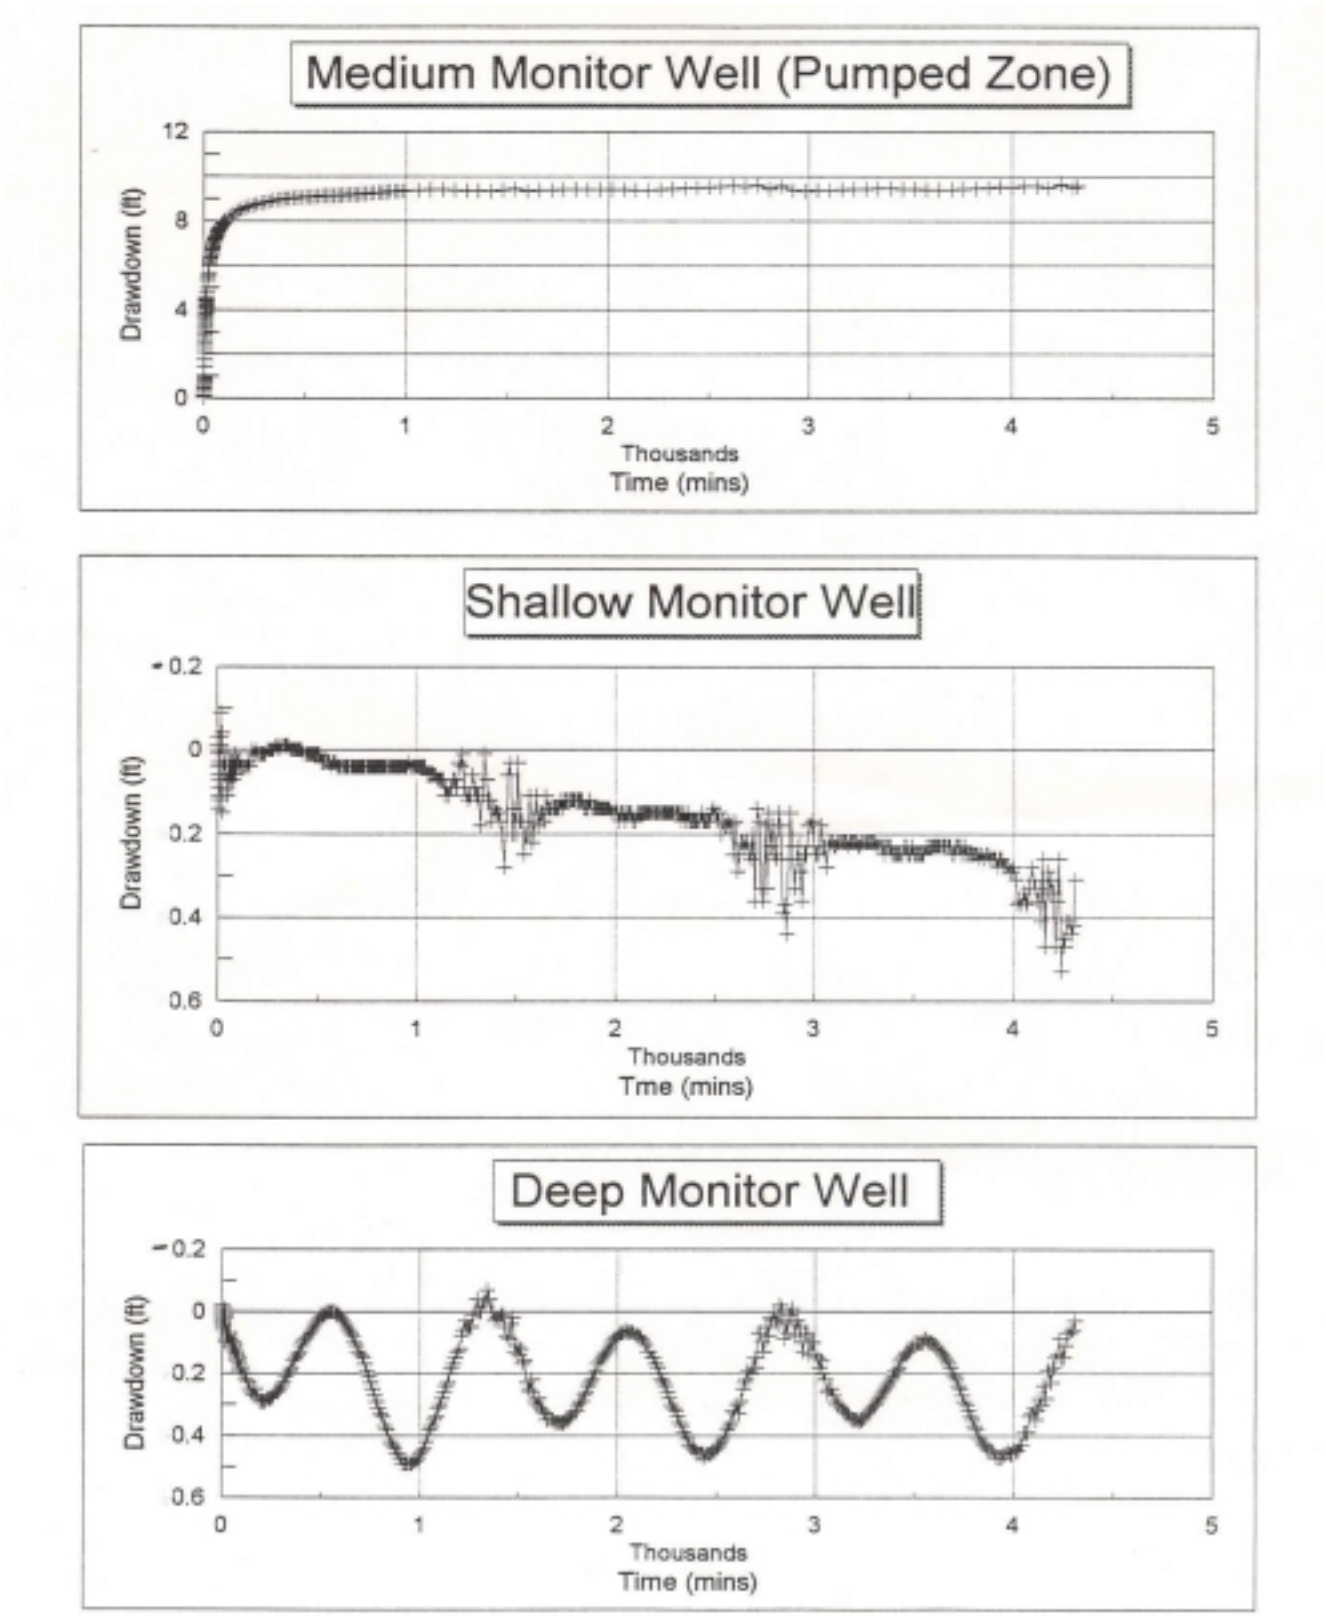

Figure 15. Water Level Responses in all Monitor Wells to Pumping BF-2 (Middle Flow Zone).

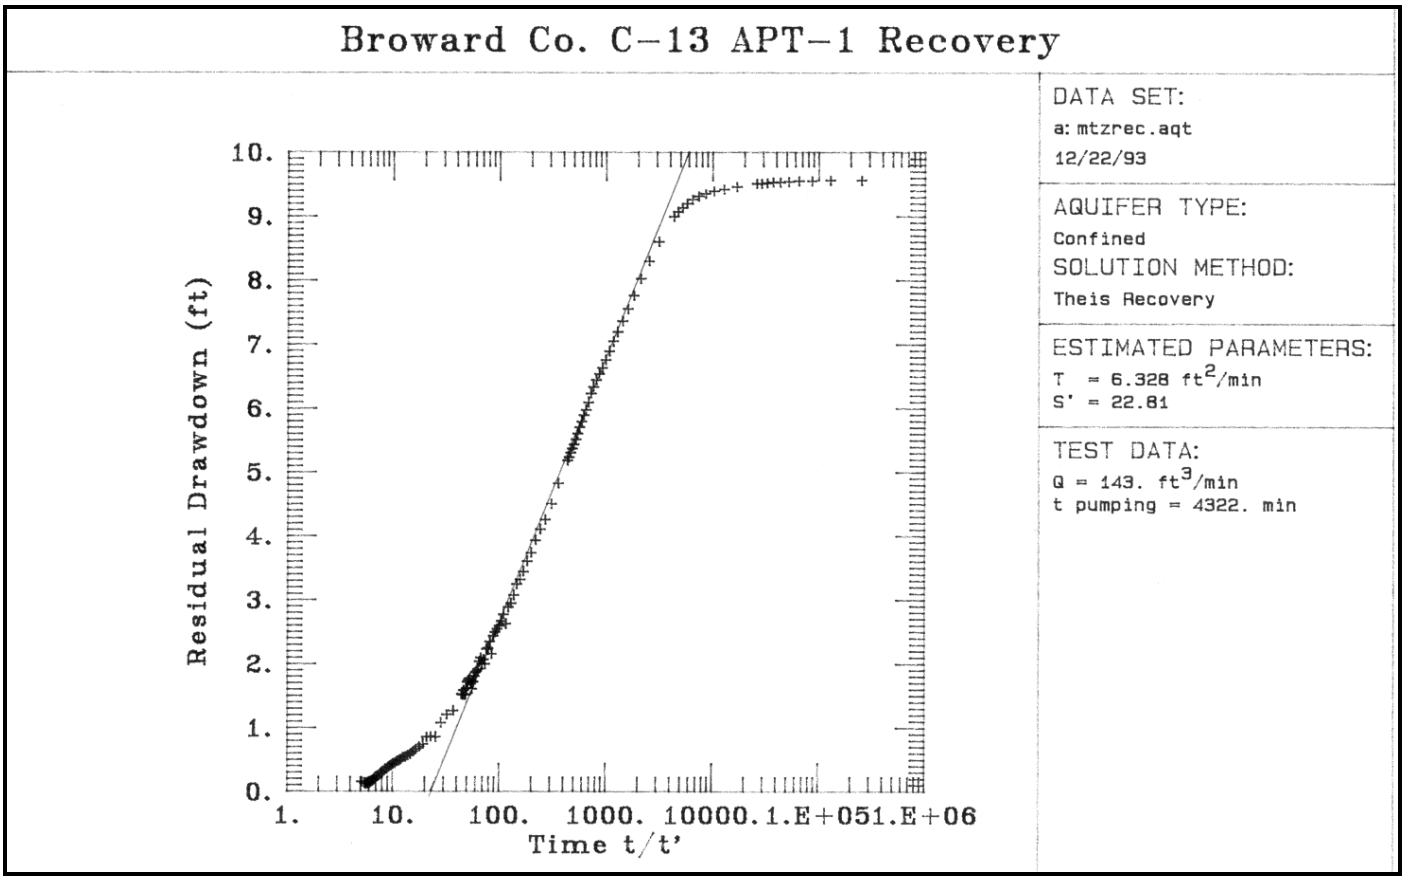

Figure 16. **APT-1, Semi-Log Plot of Time Drawdown During Recovery Phase (Middle Flow Zone).**

APT-1 Water Quality Results

BF-2 was sampled every eight hours during the pumping phase of APT-1 to determine if any temporal changes in water quality resulted from pumping the aquifer. Those samples were submitted to the District's Laboratory for cation/anion analyses. **Table 6** summarizes the analytical results. No significant water quality trends/changes over time can be seen in this data.

Minutes After Pumping	Ca mg/L	Mg mg/L	Na mg/L	K mg/L	Alka/50 meq/L	Cl- mg/L	SO4 mg/L	mg/LACO CACO	SIO2 mg/L	TDS mg/L	Sp Cond umhos/cm	TEMP °C	pH units

Table 6. Water Quality Data from APT-1 (1,500' to 1,600' bls).

APT-2: Upper Floridan- Attempt 1

An APT-2 was performed in BF-3 and failed on October 25, 1993. It pumped the uppermost flow zone in the FAS open hole completed between 1,000 to 1,200 feet bls. The submersible pump failed 10 hours into the test, probably due to the large suspended load of silts and sands being lifted through the pump. Drawdown data collected during the first 10 hours of the test were not suitable for analysis because the pumping rate during that time was not constant. The following is an account of the failed APT documented by the on-site geologist. It is presented here to provide additional insight into the character of this upper-most flow zone.

The APT began at 14:22 hours on October 25, 1993. During the first 30 minutes of the pump test, the production well was pumping at 1,100 gpm, with slightly milky water being discharged. Then at 16:40 hours (2.2 hours into the test) the production well started to produce very turbid water containing considerable amounts of phosphatic silt and fine quartz sand. Once this happened, the pumping rate dropped to approximately 980 gpm. The well continued to discharge turbid water until approximately 19:00 hours at which time the submersible pump stopped due to a circuit overload causing the breaker to be tripped. The pump could not be restarted. The source of the fine phosphatic sand may have been due to sinkhole development or karstification in the Avon Park Formation and the infilling of the sinkhole with overlying sediment of the Suwannee Formation.

APT-2: Upper Floridan- Attempt 2:

The District attempted a second APT in BF-3 on June 9, 1997. This time it was completed successfully over the open hole interval from 1,000 to 1,200 feet bls. The well was developed prior to the APT for several hours until discharge water was clear. This APT consisted of pumping well BF-3 for 70 hours at a constant discharge rate of 990 gpm while monitoring water levels in all other wells. Aquifer parameters were computed from time-drawdown data collected in monitoring well BF-4S in the same zone as BF-3 and located 365 feet from the pumping well. Various analytical solutions were applied to the drawdown data to determine the hydraulic properties of the aquifer and aquitard(s) at this site. The Hantush Jacob (1955) leaky solution provided the "best fit" to the time-drawdown data. **Figure 17** is a log/log plot of drawdown versus time for the pumped interval and the Hantush Jacob solution.

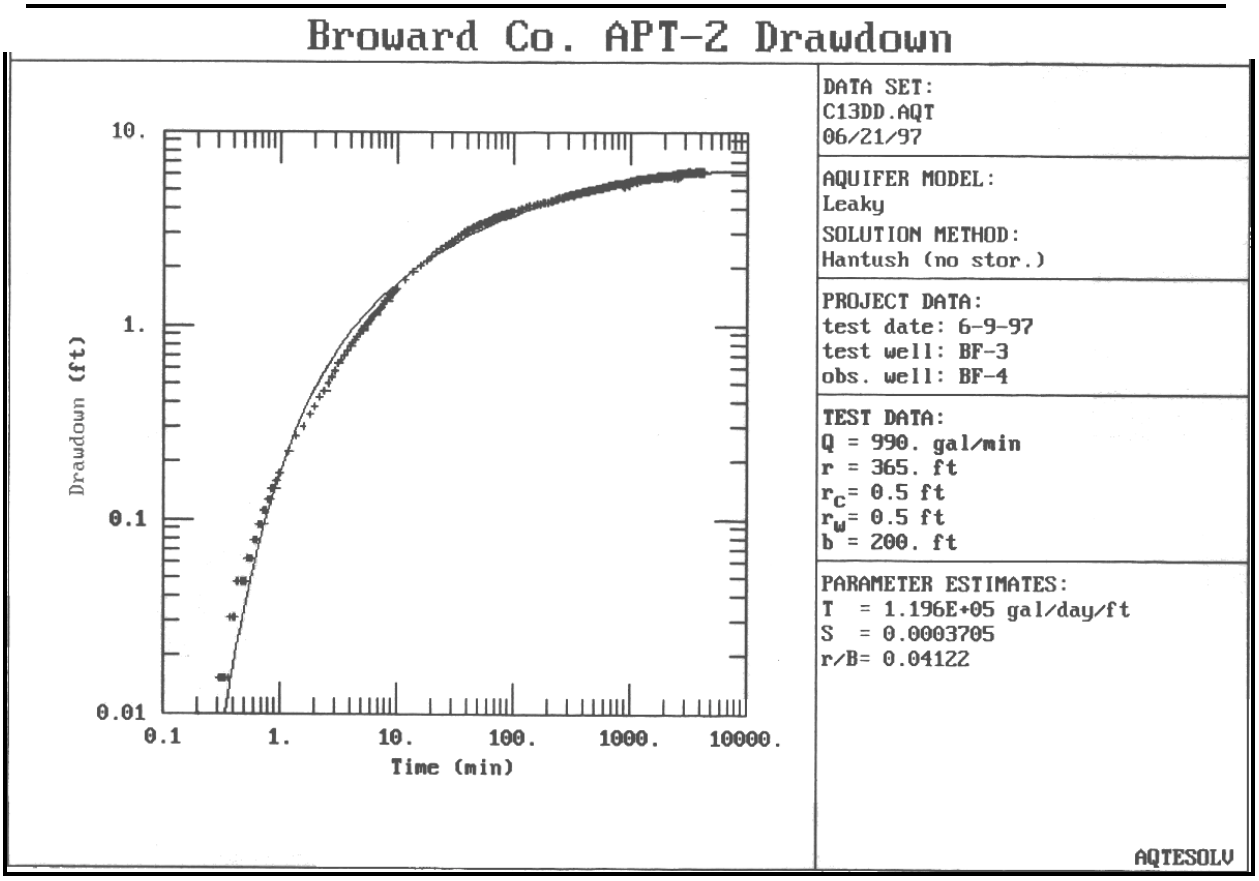

Figure 17. APT-2, Log/log Plot of Drawdown vs. Time for Monitor Well BF-4S (Upper Flow Zone).

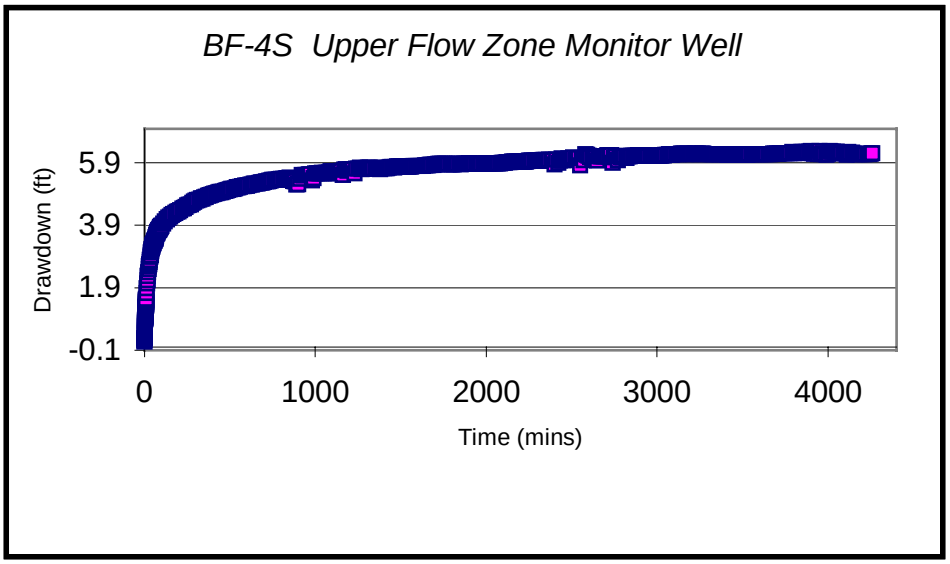
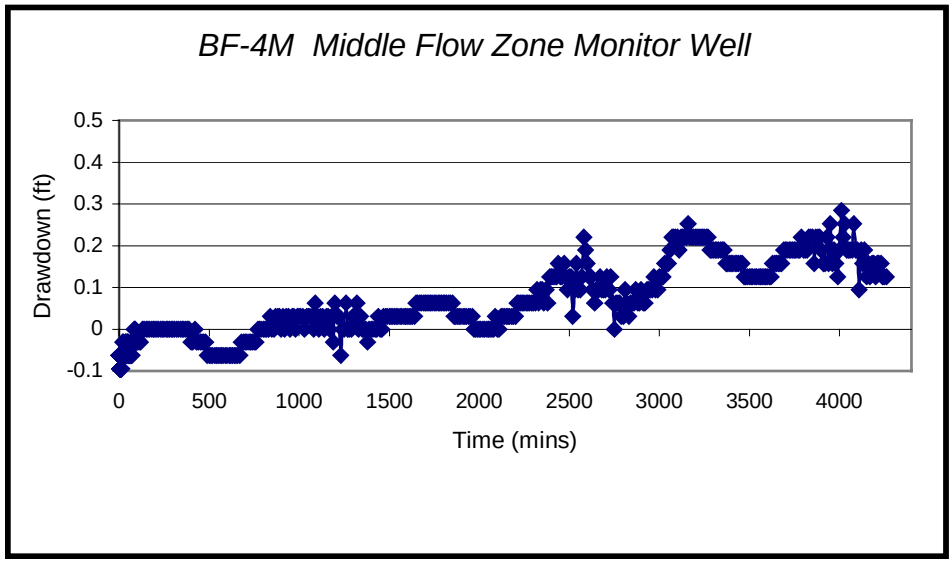
A plot of water levels measured in each of the three flow zones of the Floridan (Deep: BF-1, Shallow: BF-4S, and Middle: BF-4M) in response to pumping the upper flow zone at a rate of 990 gpm is given in **Figure 18.** This figure shows the interaction of water levels between zones. Water levels in the upper flow zone (BF-4S) decreased approximately 6.0 feet, those in the middle flow zone (BF-4M) decreased approximately 0.25 feet while the lower zone increased approximately 0.4 feet over the same period after 4,000 minutes of pumping. This increase in the lower flow zone is attributed to tidal rather than pumping responses.





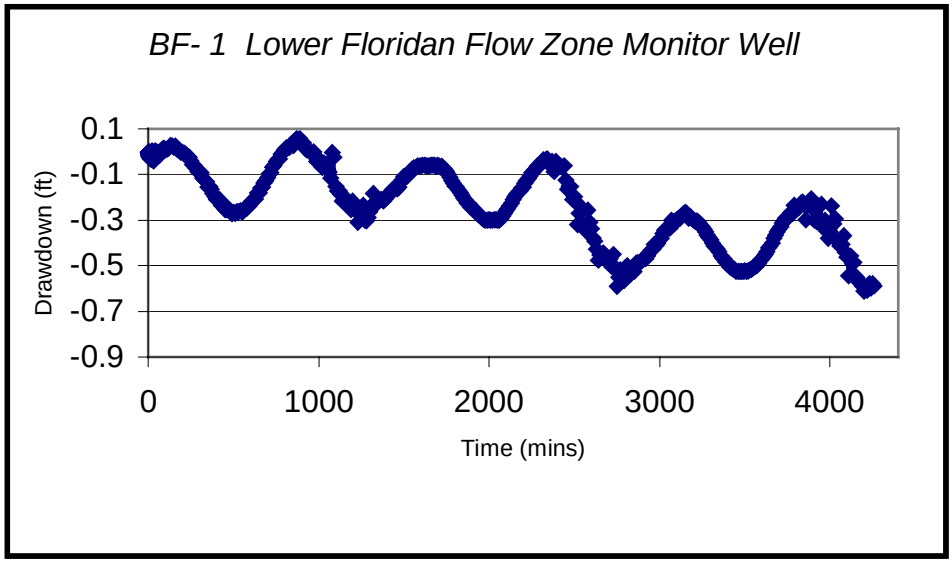


Figure 18. Water Level Responses in All Monitor Wells to Pumping BF-3 (Upper Flow Zone).

Before pumping stopped, District staff reconfigured the dataloggers to record the recovery data. The Contractor stopped the submersible pump and water levels recovered to static conditions. The recovery phase of the APT continued for 72 hours, ending June 12, 1997. The recovery time-drawdown data and Cooper-Jacob (1946) analysis are shown in **Figure 19.** Analyses of the recovery data from this APT produced similar hydraulic results as compared to the drawdown analysis. The analysis of the recovery data yielded a transmissivity of 159,600 gpd/ft. These results compare favorably with the analysis of the equivalent zones at the City of Ft. Lauderdale Five-ash water treatment plant ASR system (located 3 miles east), with a transmissivity value of 146,000 gpd/ft (Montgomery Watson, 1998). Electronic copies of the original drawdown and recovery data for the APT are archived and available for review at the District's headquarters in West Palm Beach, Florida.

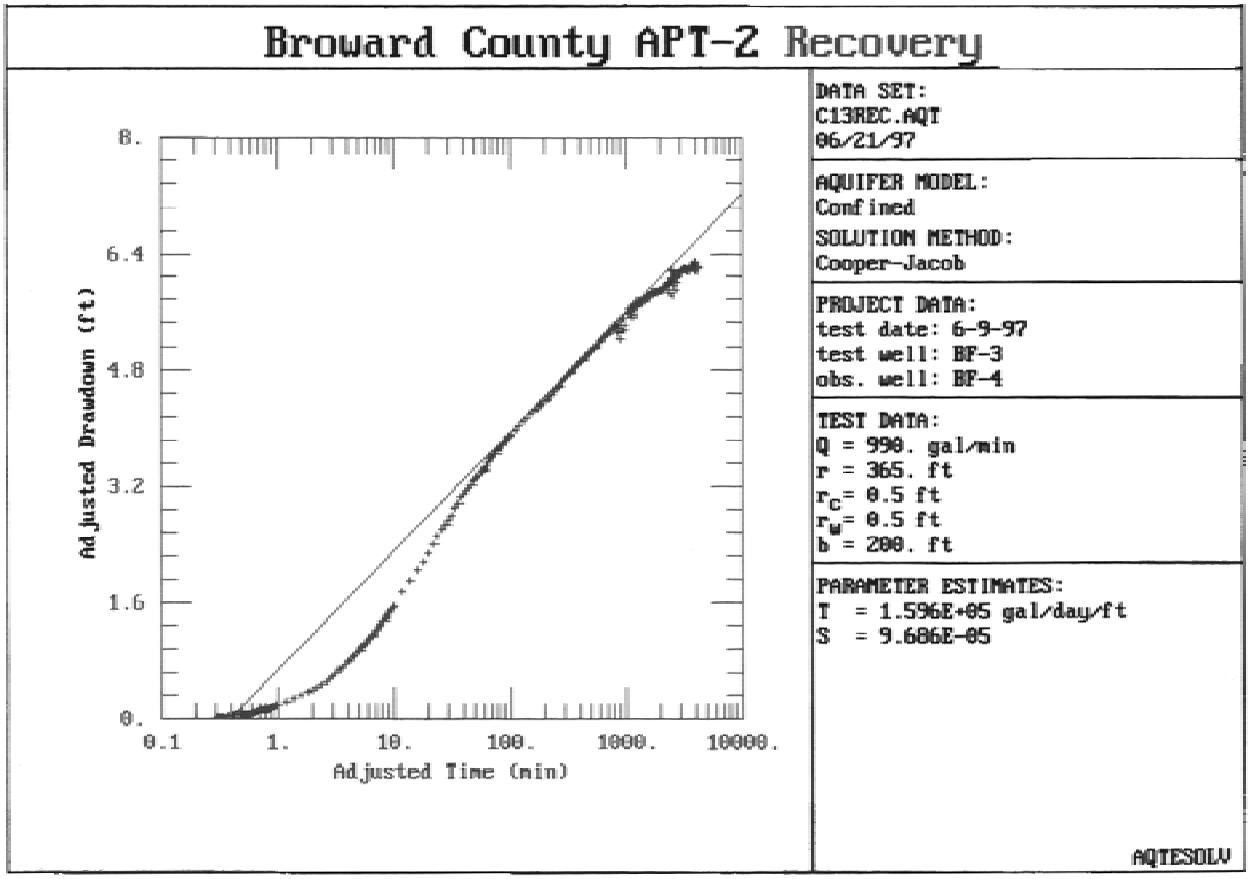

Figure 19. APT-2, Semi-Log Plot of Time Drawdown During Recovery Phase.

APT-2 Water Quality Results

BF-3 was sampled once after 25 hours of pumping during the drawdown phase of APT-2. Those samples were submitted to the District's laboratory for cation/anion analyses. **Table 7** summarizes the analytical results.

Date	Ca mg/L	Mg mg/L	Na mg/L	K mg/L	Alka/50 meq/L	Cl-(Lab) mg/L	SO4 mg/L	Hardness mg/L CACO	SIO2 mg/L	TDS mg/L	pH Units
06/12/97	200.0	286.0	9880.0	436.8	7.0	4218.0	883.0	1680.0	13.8	8360.0	7.0

Table 7. Water Quality Data from APT-2 (1,000' to 1,200' bls).

Figure 20 summarizes most of the pertinent hydraulic characteristics of the FAS at the site including: depths to flow zones, packer test depths and results, APT depths, final monitor intervals, water quality characteristics, etc.

Cross-Well Tomography

The District contracted with the University of Miami to conduct a pilot experiment of the Super Cross-Well Tomography (SCWT) system at the C-13 canal site. A summary of this pilot project was documented by Yamamoto and Kuru (1997) and is available in the District's reference center. The field data collection effort took place between March 3 through March 12, 1997. The District served as the coordinator and facilitator in the field, providing a 40-foot high standpipe over the well and mechanical devices, cranes and staff to lower probes into the stand pipe. An acoustic source was placed in well BF-2 while an 8-channel hydrophone array with a constant inter-element distance of 26 feet was placed in well BF-1. These two wells are 37 feet apart. The velocity and attenuation within the limestone formations were measured by transmitting pseudo-random binary sequence pulses. The measured velocity and attenuation data were inverted for the permeability and porosity images. Theoretically, these images provide an uninterrupted vertical map (between 150 to 1,600 feet bls) of permeability and porosity, both in open hole and through casing. **Figure 21** and **Figure 22** are example strip logs showing permeability in the section between 1,000 and 1,220 feet bls and 1,320 and 1,560 feet bls. **Figure 23** is a permeability bar graph summarizing the interpretations of the cross-well tomography results.

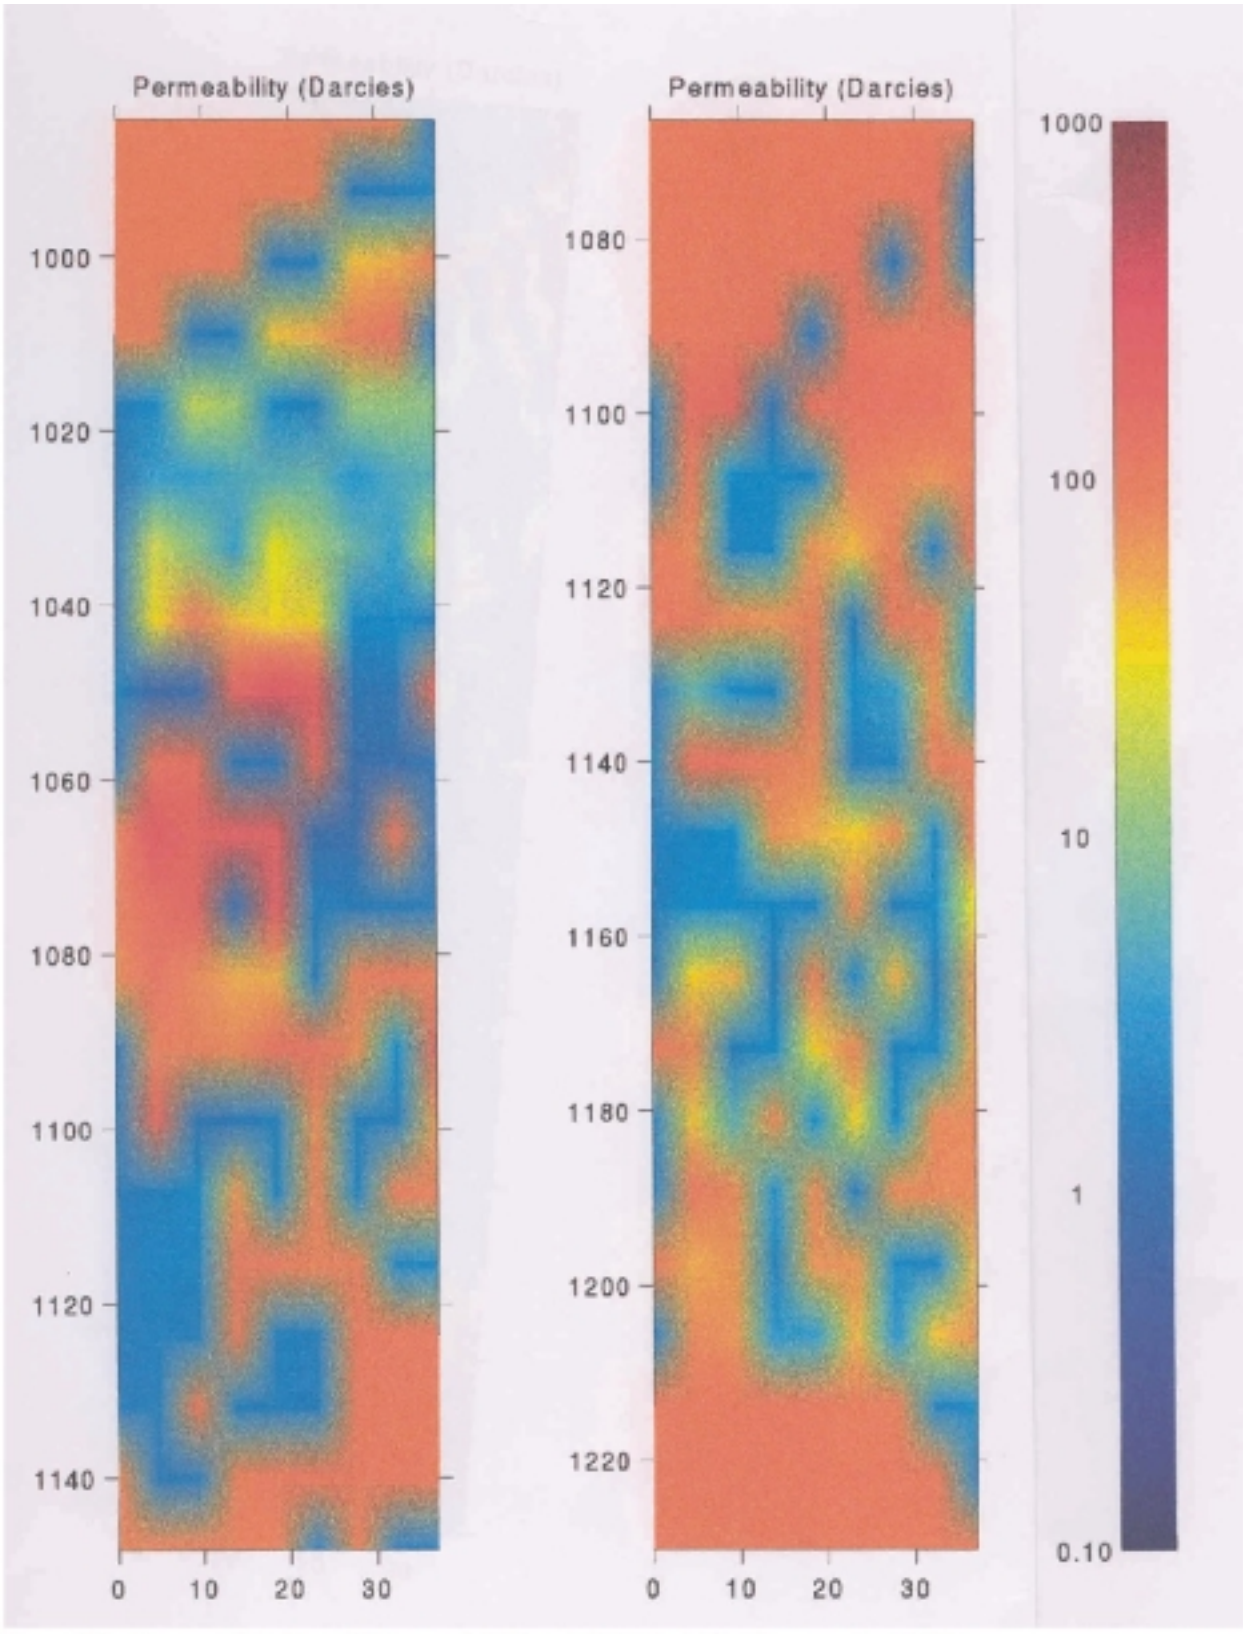

Figure 21. Permeability Trace Between 1,000 and 1,220 feet bls (Yamamoto, 1997)

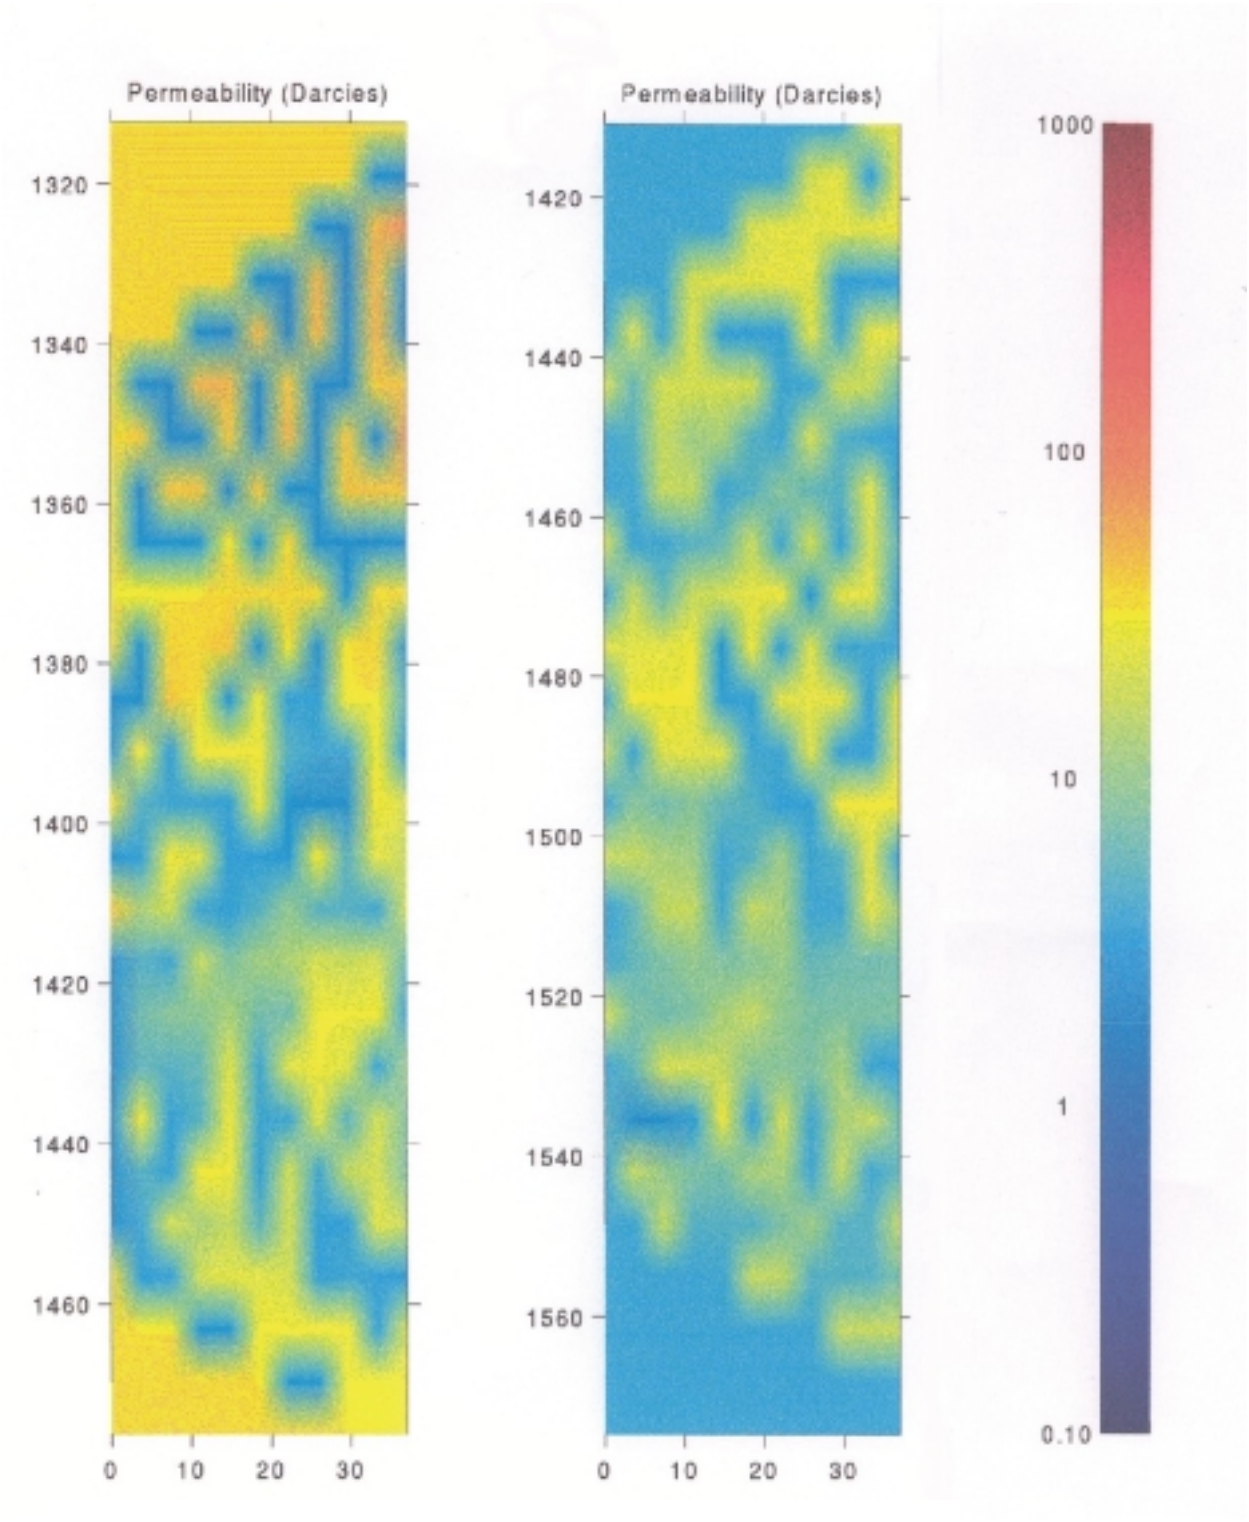

Figure 22. Permeability Trace Between 1,320 to 1,560 feet bls (Yamamoto, 1997)

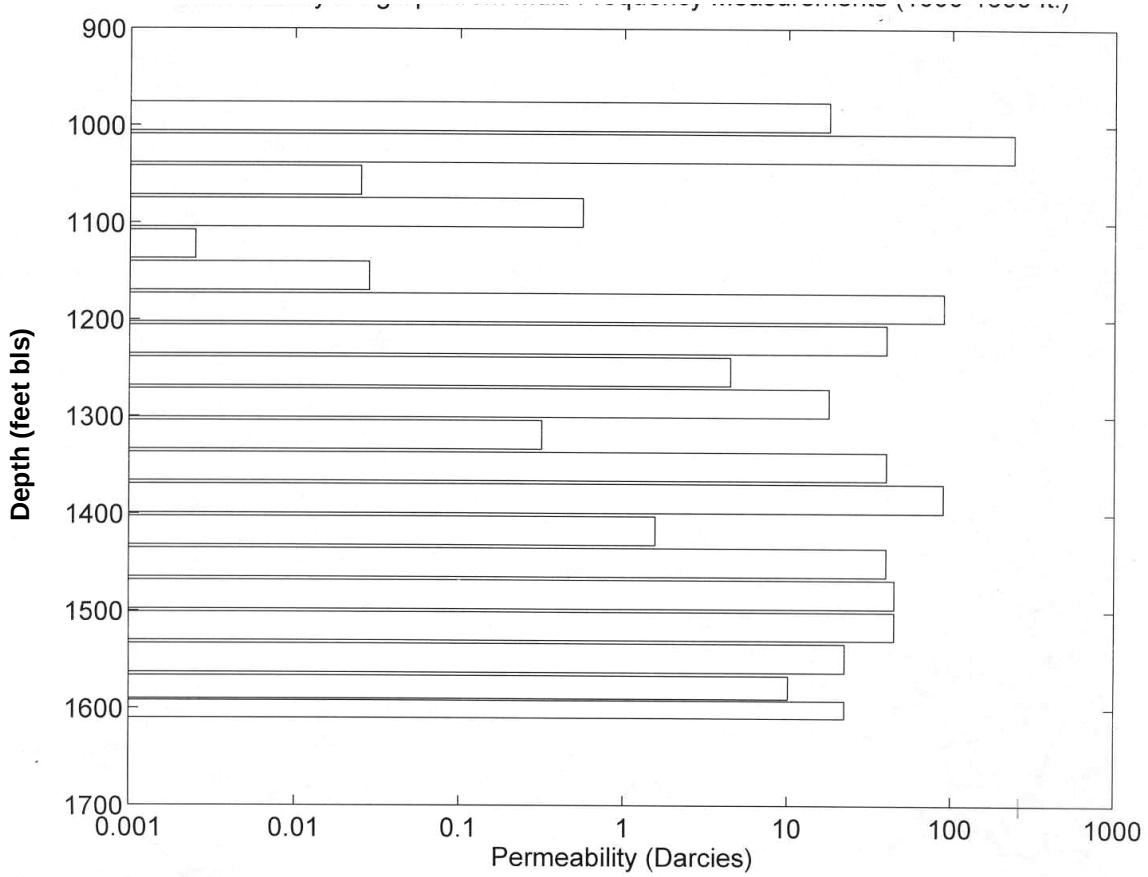

Figure 23. Permeability Bargraph from Multi Frequency Measurements (1,000 – 1,600 feet), (Yamamoto, 1997) .

WATER LEVELS

District staff collected monthly water levels from wells BF-1, BF-4M, and BF-4S manually from January 1994 to June 2001. In November 2001, a Campbell Scientific CR10 data recorder was installed on the wells with a pressure transducer. This recorder measures and records water levels every 15 minutes. Water levels are referenced to NGVD, 1929. Both monthly and average daily water levels from wells BF-4M, BF-4S, and BF-1 were used to develop **Figures 24 and 25**. These hydrographs illustrate how temporal water levels (unadjusted for density) in BF-4M are approximately 2-3 feet higher than those in BF-4S, both of which are approximately 35 feet higher than those in BF-1, as shown in **Figure 25**. Water in the lower Floridan aquifer is more saline than in the upper and middle Floridan aquifers and thus denser and heavier. This heavy water suppresses the height that the column of water can rise in the well.

The mean water level for the period of record (January 1994 to June 2002) for the upper, middle and lower Floridan aquifer zones (BF-4S, BF-4M, BF-1, respectively) at the site were approximately +42, +45 and +7 feet NGVD, respectively. Since the wells' measuring points are approximately +12 feet NGVD, water in the upper and middle Floridan aquifer wells stands approximately 30 feet above land surface, while water in the lower Floridan aquifer stands approximately 5 feet bls.

Water levels in the upper and middle Floridan aquifer fluctuated within a range of approximately 3 feet above and below the average values during the period of record. Similarly, water levels in the lower Floridan aquifer fluctuated within a range of approximately 2 feet above and below the average values during the period of record. It is interesting to note that water levels in both the upper and lower Floridan aquifers increased over the period of record (7 years).

Equivalent Freshwater Head Correction

The "raw" water levels recorded at the wellhead were converted to "equivalent freshwater heads" using the Ghyben-Herzberg method. To perform the correction, the specific gravity of the water collected from each monitor zone was computed, the results of which are presented in **Table 8**. Mean freshwater equivalent heads for the upper, middle, and lower Floridan flow zones are shown in **Table 9**.

Examination of the density-corrected water levels indicates that the lower Floridan aquifer actually exhibits higher water levels than the upper Floridan aquifer. This infers that ground water flow at the site is upward from the lower Floridan aquifer to the upper Floridan aquifer.

Monitor Zone	Total Dissolved Solids (mg/L)	Specific Gravity (g/cm^3)
BF-4S (upper)	8,360	1.0045
BF-4M (middle)	5,000	1.0026
BF-1 (lower)	31,900	1.0237

Table 8. Specific Gravity of Water in Wells BF-4S, BF-4M, and BF-1.

Monitor Well	Depth Interval (feet, bls)	Measuring Point Elevation (feet NGVD)	Uncorrected Water Level (feet, NGVD)	Corrected Water Level (feet, NGVD)
BF-4S (upper)	1,000 - 1,200	13.72	42	47
BF-4M (middle)	1,550 - 1,600	13.01	45	49
BF-1 (lower)	2,100 - 2,250	12.44	7	59

Table 9. Mean Water Levels and Equivalent Freshwater Heads (mean levels over POR).

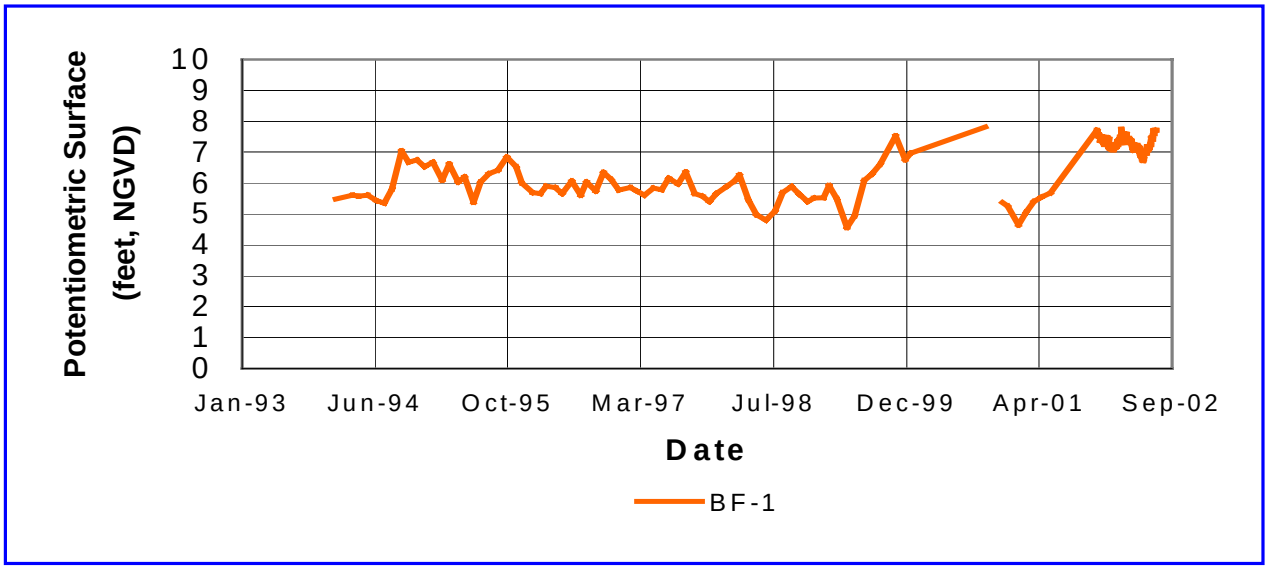

Figure 25. Hydrograph for BF-1.

SUMMARY

Four new wells were constructed in east-central Broward County at the S-36 salinity control structure on the northern right-of-way of the District's C-13 canal. These wells were constructed to obtain hydrogeologic and water quality data from the FAS. The pilot hole (BF-1) was drilled deepest and was the most extensively tested among the four wells. It was drilled to a total depth of 2,280 feet bls.

The principal findings of the exploratory drilling and testing program are as follows:

- The SAS extends from land surface to a depth of approximately 361 feet bls.
- The Hawthorn group (upper confining unit) was found to extend to approximately 975 feet bls.
- The top of the FAS was identified at a depth of approximately 975 feet bls.
- Significant flow was found coming from an "upper" producing zone 60 feet below the top of the FAS between 1,000-1,030 feet bls. The temperature log recorded a strong flow zone between 1,145 to 1,155 feet bls. An APT performed on the open-hole interval between 1,000 – 1,200 feet bls yielded a transmissivity of 119,600 gpd/ft, leakance was $1.52e^{-3}$ gallons per day per foot and chloride concentration was 4,218 mg/L.
- A significant flow zone was found between 1,500 and 1,600 feet bls. Transmissivity across this interval was approximately 70,300 gpd/ft, leakance was $2.22e^{-3}$ gallons per day per foot and the chloride concentration was 2,800 mg/L.
- The base of the USDW was found at approximately 1,710 feet bls.
- The middle confining units were tested using packers. They were found to have low permeability overall. Two intervals were packer tested between 1,726-1,772 feet bls and 2,078-2,088 feet bls and found to have specific capacities of 5.52 and 0.07 gpm/ft, respectively.
- The cross-well tomography system was used in a pilot to test its applicability in mapping permeability profiles between two Floridan wells. The results of the pilot were inconclusive in the author's opinion. Aquifer permeability mapped using cross-well tomography compared favorably with those from two aquifer pump tests, however, those maps also displayed much higher permeability than expected within the middle-confining unit.

- Mean water levels (uncorrected for salinity) in the upper, middle and lower FAS intervals (BF4S, BF-4M, and BF-1) over a 7-year period of record were approximately +42, +45 and +7 feet above the National Geodetic Vertical Datum of 1929 (NGVD), respectively. Water levels fluctuated 3-5 feet in the upper and middle flow zones and between 1-3 feet in the lower Floridan aquifer.

- Equivalent freshwater heads in those same aquifers (upper, middle and lower Floridan) were +47, +49 and +59 feet NGVD, respectively, inferring groundwater moves from the lower to the upper Floridan at the site.

APPENDIX A-2
SITE GEOLOGIST'S DESCRIPTIONS

SOUTH FLORIDA WATER MANAGEMENT DISTRICT
LITHOLOGIC
PROJECT: C-13 WELL N0: D-1 DATE: 12/14/92

TIME STARTED: 11:00 A.M.

DEPTH (FT)	GEOLOGIC DESCRIPTION
GL (Note)	0-30' Drilled W/Auger, Set 27' of 30" Steel Pit Casing.
0-30	No samples
30-35	Sand, white-tan, med. grained(mg), oolitic, fairly well indurated; carbonate cement shell frags: minor, wht. 10% silty clay.
35-40	Sand, wht, oolitic, shells, minor (more shells than above),less clay fraction.
40-45	As above.
45-50	As above, shells, tr.calcite, more grey silstone.
50-55	As above, increasing grey siltstone 15%.
55-60	Decreasing siltstone 10%.
60-63	As above, chunks of grey siltstone as above.
63-65	Sand, 65% wht-tan as above. 30% silt, grey chunks, mod.indurated. 5% shell & wht chalk.
65-70	Sand, 70% wht-tan to calcite grey silt, as above tr. chalk, shells.
70-75	Sand, as above, less silt.
75-80	Sand and calcite, silt as above.
80-90	Sand 80%, calcite, phosphate nodules and grains.
90-100	No sample.
100-105	Sand and limestone, wht-tan, grey silt, calcite and shell to phosphate, chalk.
105-110	Sand and limestone, tan-grey, well indurated small chunks.

110-115	Oolitic,grey sand: oolitic, tr. chalk.
115-117	Sand and limestone, grey & tan as above, shells, phosphate as above.
117-120	Sand and limestone, tan-grey, tr. phosphate.
120-125	Sand and Limestone, as above.
125-150	Sand and limestone, as above, tr. phosphate, some shells, tr. calcite, chalk. Good amount of chalk and phosphate.
150-153	No sample.
153-155	Limestone and sandy limestone: tan-grey-dk.grey grainy, tr. phosphate, chalk, v.minor trace small shells.
155-160	Limestone and sandstone, as above, more shell, chalk.
160-165	As above, more limstone, chalky.
165-178	Limestone, grey, hard, well indurated, less-no chalk.
178-180	Limestone, dk.grey with fine gr. sandy white limestone, oolitic with some chalk.
180-185	Sandy limestone, dk.grey: tan sandy limestone with traces of phosp. quartz present with small small shell frags.
185-190	As above with more shell frags, also larger shell. Dark grey limestone present. V.hard limestone.
190-195	Sandy limestone, tan to white, with some dark limestone; less frags of shell. Quartz sand present, well rounded grain size.
195-200	As above with specks of phosphate.
200-208	As above.
208-210	Sandy limestone, tan and grey, with calcite. Contains small specks of phosp., grain size, very small with shell frags.
210-215	As above.

215-220	As above, with small frags of cone-shaped shell increase. limestone appears harder.
220-225	As above.
225-230	As above.
230-237	As above.
237-240	Clay, plastic, tan to lt.brown. Sandstone, tan to white. 20% shell, 20% clay, 60% sand and limestone. No phosph.
240-245	As above.
245-250	Sand and limestone, as above 85%, with trace of clay as above.
250-255	Sandy limestone, 90%, dark green with tan lime-stone.(Sand: mg, carbonate cmt. aggregates) small shell frags.
255-268	Sand, 90%, lt.green-dk.green with tan limstone as above, shell frags as above.
268-270	Sand, 90%, caco3 cmt., fine-m.grained, lt.green-grey, tr. phosphate. Shell 10%.
270-298	As above.
298-300	Shell, 60%, green-grey, and tan limestone.
300-305	As above.
305-310	As above, containing green silty clay. Sand and shell; sand: lt.green, caco3 cmt.,f-m gr.,vf-f grn.,grn-hgrn & silt. Some phosphate, tr. clay.
310-332	As above. Grn-dk.grn silty clay.

332-335	Sand and shell;sand with lt.gr. caco3 limestone.
335-340	As above, with tr. phos., tr. clay
340-361	As above.
361-392	Sandy limestone, caco3 cmt., dark green with tan limestone. Tr. phos.
392-395	Clay, silty green,with dark green and tan lime-stone frags. Small specks of phos.
395-400	Shell frags, 90%, with sandy gray limestone, with trace of phosphate and some calcite.
400-405	As above.
405-410	As above, with increased silty green clay.
410-415	Shell frags, 60%, and sandy gray limestone, frags of quartz and tan fine grain limestone with phos. 40% clay: olive silty clay.
415-420	As above, 60% clay, 30% shell, 10% dk.and tan limestone.
420-423	As above, 70% clay, 20% shell, 10% dk.and tan limestone.
423-425	As above, 85% clay, 10% shell, 5% dk.and tan limestone.
425-430	95% silty plastic green clay, with 3% tan lime-stone, and 2% shell.
430-435	As above.
435-440	95% clay, with 5% frags of tan limestone and shell.
440-445	98% clay, with frags of shell and limestone.

445-450	95% clay, with 3% tan and dk.limestone, 2% shell frags.
450-456	99% clay, with tan and dk.limestone.
450-460	Clay: 60%, dk.green, plastic (mod), silty, tr. phosph. Limestone: 30%, sandy, md-cs grained, wht,tan & grey. Shell: 9%, small frags, wht-tan, some whole small clamshells,(buttercup lucines).
460-475	Clay and limestone as above.
475-483	Clay: 80%, more plastic than above. Sandy lime-stone as above.
483-485	60% silty green clay, 30% intergranular limestone nodules and sandstone, with 5% shell fragments ranging 2 to 4mm in length, 1% whole "buttercup lucine" shells; 4% trace phosphorites.
485-490	As above.
490-500	As above.
500-510	Sandstone, limestone and quartzitic grains , size increase ranging 4 to 6mm in width/length, all contained into a green silty clay matix.
510-515	As above, with increase of grain components 40%, with 50% being silty green hawthorn clay.
515-530	65% silty green phosphoritic clay matrix with 25 to 30% sandy limestone as above.
530-540	As above.
540-545	65% silty, green phosphoritic clay, +/- 30 gray

	to tan limestone as above; chalky, also introducing black angular limestone, platy cleavage.
545-550	55% silty, green phosphatic clay matrix, 30% chalky gray limestone, size 3mm, trace shell fragments along with trace of dark angular limestone.
550-560	As above however, lesser amount of phosphatic specs inside clay matrix. 60% clay green matrix, 25% gray, chalky, limestone, 10% tan to gray oolitic limestone, trace of coquina limestone and dark, angular limestone.
560-565	Increasing amount of soft green silty clay 75 to 80%. 5% oolitic limestone, tan to light gray. Tr. limestone nuggets ranging in size from 3mm to 5mm in length.
565-570	As above.
570-575	As above with an increase in plasticity.
575-580	Clay: light green to milky white, chalky yet less plastic. "Shark tooth".
580-600	Clay: 80%, lt. to med.gray, mod. plasticity. 20% limestone and sandy limestone as above.
600-605	Clay: 95%, as above, more plastic, nodules of adhesive clay. 5% limestone as above.
605-610	Clay: 95%, globular plastic, light green to milky white. 5% limestone grains.
610-615	As above.
615-620	As above.
620-630	As above with lesser degree of limestone chips.

630-640	Clay: 95%, globular plastic, somewhat soupier.
640-650	98% chunky, milky clay with trace of limestone chips.
650-660	As above.
660-670	As above, increase of limestone chips, make up 4%.
670-680	Clay: 97%, light green to milky, decreasing in plasticity, silty.
680-690	As above.
690-700	As above, yet clay comprised of larger size limestone chips, no additional limestone content.
700-710	Clay: gray-green as above, mod. plasticity, little to no limestone of rock.
710-725	Clay: as above, increase slightly in limestone as above, less plastic.
725-730	Clay; 40% gray-green and silt as above, 60% limestone; white-tan, grainy, tr. shell, tr. phosphate.
730-755	Clay: 50%, as above, plastic. Limestone; 45%, white, med. grain, chalky, some subangular, tr. oolitic, mod. well indurated, carb. cmt. Shark tooth, tr. phosphorite.
755-763	As above, increasing limestone, tr. chert or siltstone; olive green, subangular, translucive, 4-6mm, no reaction with acid, hard.
763-770	Clay: comprised of 50% matrix of light green to gray, 40% limestone grains ranging in size from 2mm to 4mm, trace chert fragments, little to no HCL reaction.

770-780	Clay: as above,50%, limestone; white to tan, fine to med. grain, some platy, oolitic trace of phosphate.
780-790	As above, trace chert(platy cleavage).
790-795	Clay: 70%, limestone; 30% as above.
795-824	Clay and limestone as above.
824-830	80% light green plastic clay, 5% fragmented light colored shells, 5% limestone chips, oblong to round, coarse grained, 2% chert chips.
830-840	As above.
840-850	80% light green plastic clay, 10% limesone chips, 5% dark limestone chips, trace chert fragments.
850-855	As above, increase of chert fragements.
855-860	90% clay, green plastic, 10% oolitic limestone nodules, trace of chert.
860-870	As above.
870-875	90% clay, light green, 10% limestone.
875-880	80% clay, light green, plastic. Combination of anthracite; black to brown, semiangular, well indurated. Oolitic limestone; white, med. grain, poorly indurated. siltstone; olive green, mod. indurated, platy, coquina rock.
880-885	90% clay as above, 10% limestone as above, some dark olive limestone, well indurated, crypto-crystalline, hard, angular.
885-890	80% clay light green, plastic. 15% limestone, olive green to light gray, moderately indurated, fine to med. grained, shell molds, tr. shell frag-

	ments, tr. phosphate nodules.
890-900	As above, slight increase in phosphate nodules.
900-905	As above, trace crinoidal stems.
905-915	90% clay as above, 5% siltstone, fragments.
915-920	80% clay, light green, plastic. 5% limestone, light green to tan, modurately indurated, med. grain, shell molds, trace of crinoid stems, siltstones; d.brown to black.
920-940	As above.
940-945	80% limestone, light tan-green, med. grain, mod. indurated. 15% clay, light green, less plastic, tr. shell fragments.
945-955	90% limestone, tan to light brown, phosphatic specs, poorly indurated, fine to med. grain. 10% micritic mud, trace snail molds.
955-965	50% carbonaceous mud, slightly plastic, tan to green. 50% limestone as above.
965-970	80% limestone, tan to light olive green, fine grain, poorly indurated. 20% carbonaceous mud as above, tr. phosphate, tr. shell.
970-975	80% limestone, as above, abundant phosphate specs, 20% mud as above.
975-985	90% limestone, tan-lt.green, med. grain, poorly indurated, tr. phosphate, 9% clay as above, tr. shell frags, tiny disk-shaped leps, crinoid stems, shark tooth.
985-990	90% limestone, as above, shell molds, increasing tiny disk leps, tr. crinoids as above.
990-995	100% limestone, as above, 10% white limestone; fairly well indurated, fine grain, tr. tiny leps as above, tr. shell frags.
995-1000	100% limestone, 60% white, 1/2 fine grained, mod. indurated, 1/2 cryptocrystalline, angular, hard, tr. wishbone coral, 20% tan-lt.green as above, 10% coral and crinoids.

SOUTH FLORIDA WATER MANAGEMENT DISTRICT
LITHOLOGIC
PROJECT: C-13 WELL NO: D-1 DATE:1/25/93

DEPTH (FT)	GEOLOGIC DECRIPTION
1000-1005	Limestone: 100% Mixed, olive green-green; hard micro crystalline, some conchoidal fractures, angular, subangular, hard, no porosity black:hard, sub-rounded and dense. White, hard-mod.hard, shell molds, biogenic, no chalk or silt. Tr. clay:from above, tr. cement:from grouting.
1005-1008	Limestone: 90% wht-lt.gray, biogenic, abundant crinoid, shell molds. Med-coarse grained, friable, no visible leps or cones, tr. silt, wht.
1008-1018	Limestone: 100% wht to lt.gray med grained, mod. friable shell molds, shark teeth, criniods, small shells(misc), possible tr. leps.
1018-1025	Limestone: 100% med.-dk.gray, hard, slow drlg., crystalline, some solution vugs and moldic porosity, tr.shell molds, tr. calcite,tr. snail.
1025-1030	Limestone as above 80%, limestone: 20%; m.-dk.gray dense, hard, tr. shell molds, calcite a.a., tr. crinoids.
1030-1035	Limestone: 85% dk.gray: sucrosic, hard; black specks, indicative of carbonaceous reducing environment, blk.specks resemble phosphate specks, tr. crinoids, tr. shells.
1035-1038	Limestone: 10% m-dk.gray as above, 5% wht.silty clay, carbonaceous.
1038-1040	As above.
1040	Limestone: lt.orange "Avon Park" dictyoconus, crinoids, sand dollars, etc.
1040-1050	Limestone: 100% pale orange, med. grained, mod. friable, numerous buttons up to 3/4" dia., dictyoconus numerous, crinoids, shell molds moderate-high silt fraction; good intergan porosity.
1050-1060	As above, becoming slightly finer grained, more silty, trace fossils as above.

1060-1065	Limestone; lt.tan-pale orange(lees orange than above), finer grained, lots of small cones.
1065-1068	As above, 85%, 10% limestone: dk.gray-blk.; microcrystaline, platy, hard.
1068-1080	Limestone: wht-tan-pale orange, oolitic, grainy, fairly well indurated, oolitic silty-sand component washing through screen, low perm, buttons and cones.
1080-1090	Limestone: pale orange, oolitic, fairly well indurated, intergran porosity, low perm component, much more indurated, cones.
1090-1100	Limestone: wht-tan, vf.g, silty-chalky, low perm, buttons and cones a.a.
1100-1103	Limestone: tan-light shade of pale orange; f.g., silty, oolitic, mod. indurated, low perm.
1103-1105	Limestone: lt.shade pale orange-tan; well indurated m.g., less silt, large button, pin-point, and moldic porosity.
1105-1110	50% limestone as above; 50% limestone; dk.gray-blk, microcrystalline, hard platy cleavage.
1110-1115	Limestone: lt.gray, v.hard, cryptocrystalline, angular, large fragments, some pin-point porosity, low-no silt. 10% black-gray limestone as above increased porosity here.
1115-1120	Limestone: tan-lt.gray, well indurated, vuggy, pin pt. porosity, prob. low perm due to silty component.,tr. snails, sanddollar buttons, shell frags.
1120-1125	Limestone: 80% tan-lt.orange, f-med. grained,mod-well indurated, siltstone: 20%, dk.gray-blk. platy cleavage, well indurated, tr. crinoid stems, buttons.
1125-1130	Limestone: tan-pale orange, f-m. grained, very gritty almost sandy, lots of silt and fines, low perm, well cemented rounded aggregates with v.fine caco3 cement.
1130-1140	Limestone: as above, v.silty, low perm.
1140-1150	Limestone: white-lt.tan, mostly granular, f-med. grained, partly(10%) crystalline, tr. small cones.

1150-1160	Limestone: bright white, v.well indurated,to crystalline, shell molds present, discharge milky white and silty, increase to abundant small-med. cones in last few feet. Cones and buttons.(Wht-tan silt f-vf.g. to calcareous ooze in pit).
1160-1170	Limestone: tan-lt.brown, well indurated, m. grained tr. cones.
1170-1175	Limestone: tan-pale orange, well indurated, pin-point porosity, cones, hard.
1175-1180	Limestone: lt.tan-white, semi-platy, well indurated some portion(40%) crystalline, chalky silt in water, low-no perm
1180-1193	Limestone: wht. 80%, well indurated as above, and siltstone (20%), blk.-dk.gray, no fizz HCL, hard, platy.
1193-1200	Limestone: 80%, light shade of pale orange-tan, well cemented, v.fine grain, powder like matrix (not crystalline), mod. hardness, tr. shell molds and worm burrows, no perm or appreciable porosity. Limestone: 20%, white, semi-crystalline to mod. indurated, m.grained full of white silt and f.g. sandy carbonate mud. Tr. cones, tr. calcite. Lt. orange silt and carbonate ooze(mud)in discharge.
1200-1215	Limestone: tan-pale orange and white limestone as above.
1215-1221	Limestone: 98%, tan-v.pale orange as above, 2% wht. limestone as above, a lot of silt and cloudiness in discharge a.a.
1221-1230	Limestone: tan-lt.brown, poorly mod. indurated, vf. f.grn., tr. shell molds, partial snail molds, no visible cones, abundant silt and calc. ooze, v.low-no perm.
1230-1251	Limestone: as above.
1251-1270	Limestone: as above. All could be called calcare-nite, mg indurated-silty calcareous grains, low-no perm.
1270-1285	Limestone: 90% as above, siltstone: 5%, blk.dk. gray, fissile, platy, lt.wt. not v. dense, lots of calcareous mud with silt as above. Low-no perm.

1285-1290	Limestone: 100%, tan-pale orange, calcarenite as above, mod. indurated, small cuttings, abundant cones, lots of silt and calc. mud in discharge.
1290-1295	Limestone: tan as above, less orange, 5% trace siltstone; blk. as above, buttons.
1295-1305	Limestone: 30%,as above, 70% siltstone: v.light, low density, like gravel, black when wet, gray gravel bed. Blk.-gray silt and fines in discharge.
1305-1315	Limestone: 100%, tan-pale orange as above, v.silty. cones, buttons,tr. white chalk, prob. low perm due to silt in discharge.
1315-1325	Limestone: 80%, tan-calcarenite, small cuttings, abundant cones, tr. buttons, silty and low perm. Limestone: 20%, coal blk.-dk.gray, crystalline, well indurated, low-no porosity, milky silt in discharge.
1325-1330	Limestone: 95%, tan-lt. orange calcarenite as above 5% blk. limestone a.a., milky silt in discharge, cones.
1330-1335	Limestone: 85%, tan-lt. orange as above, 30% of the 85% is well indurated-crystalline, harder, trace of white chalk, milky silt in discharge. 15% dk.gray clay, plastic, in clumps, abundant cones.
1335-1345	Limestone: 95%, tan-lt. orange as above, mostly calcarenite, some crystalline ext. well indurated nodules, 5% wht. chalk-clay, tr. cones.
1345-1355	Limestone: as above.
1355-1365	Limestone: 30% as above, 70% black-dk.gray poorly indurated limestone with some well indurated gray and black, evidently organic in deposition, grain size range from med.-v.fine, mostly fines. Dk.gray sand and silty calcareous mud, v.fine grains, proceeded by long discharge of silt and clay size carbonate mud, and sand. No siliceous sand, all carbonate. V. low perm., organic deposit.
1365-1375	Limestone: 95%, tan-pale orange calcarenite, abundant cones, mod. well indurated, 5% limestone dk.gray-black as above, silty fraction in discharge.

1375-1380	Limestone: tan-pale orange as above, mostly silt, fine grains, low perm.
1380-1385	Limestone: 90%, coal blk., micrite, appears organic in origin, well cemented, mod. well indurated, abundance of blk. silt in discharge. Low perm. 10% tan limestone as above.
1385-1390	Limestone: 50%, tan-pale orange as above, buttons. Limestone: 45%, gray, mod. indurated, f.-m. grained low perm., calcarenite. 5% white chalk, tr. cones.
1390-1400	Limestone: lt.gray-tan, calcarenite, f-m. grained, poor mod. indurated, some shell molds, silty with tr. of chalk. Low-no perm. 5% dk.gray-black limestone as above, tr. cones.
1400-1405	Limestone: 40%, lt.gray-tan as above. Limestone: 60%, m.gray, hard, cryptocrystalline, pin holes, tr. calcite, poss. healed fractures or solutioning.
1405-1410	Limestone: calcarenite, tan-cream, v. silty, gritty low perm.
1410-1420	Limestone: as above with 25% blk.gray limestone calcarenite.
1420-1430	Limestone: 70%, med.dk.gray with some black, hard, fissile and granular, mod. indurated, low perm. 30% limestone: tan-cream calcarenite as above.
1430-1435	Limestone: tan-cream, v. hard cryptocrystalline, platy cuttings resulting from slow drilling, no visible porosity, no calcite, no cones.
1435-1440	Limestone: tan-cream, calcarenite, gritty, f-m. grained, mod. indurated cutting pieces, abundance of silt and carbonate mud. Low perm.
1440-1445	Limestone: Lenses of tan-cream limestone as above and lt-med.gray limestone, mod. well indurated, f-vf. grain calcarenite, some well cemented, mostly silt and sand size. Low perm.
1445-1450	Limestone: 85%-95%, tan-cream as above, +/- 10% gray clay, mod. plastic, abundant silt, snails.
1450-1460	Limestone: as above, no clay, 15% gray limestone. Cream and gray calcarenite mix, v. gritty, silty limestone, tr.(5%) of hard gray limestone, fissile and platy, hard.

1460-1470	As above.
1470-1475	Limestone: gray, f-m. grained calcarenite, gray silt in discharge, seem impermeable, intergran porosity, poor-mod. indurated, tr. shell frags, tr. cones, extremely silty.
1475-1485	Limestone: 50%, gray as above. 40% limestone, tan, 1/2 is f-m. grained calcarenite, soft, 1/2 is well indurated, hard, fossiliferous limestone, buttons and cones abundant. Mod. silty. 10% hard, well indurated, limestone, gray, moldic and pin-point porosity.
1485-1490	Calcarenite 80%, tan, f-m. grained, poorly-mod. indurated, 20% gray calcarenite as above, mod. silty.
1490-1500	Limestone: 95%, white,pale tan calcarenite f-m. grained, chalky, extremely silty, 10% gray shale, hard, fissile.
1500-1505	Limestone: white-pale tan, harder than above, cryptocrystalline, pin hole porosity, some vugs and solutioning, good porosity, platy, dense.
1505-1520	Limestone: white tan, interbeded hard, fissile, platy limestone and f-m. grained calcarenite, abundance of silt in discharge, no fossils, mostly calcarenite.
1520-1530	Limestone: dark tan-light brown(coffee color), hard, cryptocrystalline, platy, no apparent porosity, no calcite, prob. dense.
1530-1534	Limestone: white tan, v. silty, soft, poorly indurated calcilutite and calcarenite, chalky, low-no perm., tr. buttons.
1534-1545	Limestone: white, interbeded 50/50 of 50% f-m. grained calcarenite with tr. of chalk, abundance of silt in discharge, low perm., intergran porosity, 50% well indurated, cryptocrystalline, hard, no visible porosity, tr. cones.
1545-1550	Limestone: 80%, tan-cream, hard, platy, crypto-crystalline, no visible porosity, tr. chalk. Lime-stone 20%: f-m. grain calcarenite as above.
1550-1555	Limestone: 70%, f-vf. grained, f.g. calcarenite, poorly-mod. indurated, intergranular porosity, poss. perm., cones and forams abundant. Siltstone: 30%, dk.gray, platy, no perm.

1555-1560	Limestone: 90%, white f.g. calcarenite, 10% chalk and silt, low-no perm. as above. 10% siltstone, gray as above, tr. forams as above.
1560-1565	Limestone: tan-white, f-med. grain calcarenite, slightly more indurated than above, some tan-pale orange, button frags., not as grainy, less silt than above. Tr. buttons.
1565-1570	Limestone: tan, moderately to well indurated,v.f.-fine grained, some intergranular porosity, hard, tr. white and greenish blue chalk and clay.
1570-1575	Limestone: tan-gray as above, tr. chalk, cones and forams as above.
1575-1580	Limestone: as above, more tan-cream, increasing siltyness and chalk.
1580-1585	Limestone: bright white,pinhole porosity,worm burrows, v. hard, platy, angular, crypto-crystalline, fair porosity, tr. forams.
1585-1590	Limestone: 90%, white as above. 10% siltstone, gray, mod. well indurated, less silt than above, tr. forams as above.
1590-1593	Limestone: wht. to tan, v.f.-fine grained, calci-lutite, poorly indurated, chalky and silty. 5% siltstone dk.gray as above, tr. forams, disks.
1593-1595	Limestone: tan-brown(mocha), v.f.-fine grained, poorly indurated, silty. 10% buttons and forams.
1595-1605	Limestone: tan, f.-v.fine grained calcarenite , poorly indurated, poss. intergran porosity, tr. chalk, tr. buttons.
1605-1610	Limestone: white-tan as above.
1610-1615	Calcareous sand and silt, tan-lt.brown, unconsoli-dated, v.f.-fine and med. grained, poorly sorted, tr. chalk, abundance of small buttons, poor perm., soft.
1615-1620	Calcareous sand and mud, med.-dk.gray, finer grained than above, v.f.-fine grained, poorly sorted, organic deposit, black coal-like nodules, low-no perm., soft.

1620-1623	Calcareous sand, gray-tan and black, poorly sorted, silty, coarser grained than above.
1623-1627	Limestone: 90%, mostly tan, some gray, blk. and white, poor mod. indurated, f.-med. grained calcarenite, abundance of disks and cones.
1627-1635	Limestone: 90%, tan, some dark and light colored, mod. indurated, fine to med. grained. +/- 5% siltstone, gray to dark, fine grained.
1635-1640	As above, tan, tr. forams.
1640-1645	Limestone: 90%, tan to white, medium grained, mod. induration. Tr. forams.
1645-1650	Limestone: 90%, tan to white, moderately indurated, calcilutite, calcarenite,+/- 5% forams, disk shape, tr. chalk, tr. silt.
1650-1653	Limestone: 90%, tan to brown, mod. to well indurated, silty, chalky, light colored, tr. forams.
1653-1658	Limestone: 90%, tan, moderately indurated, calcarenite with some calcilutite, +/- 5% siltstone, gray, poorly indurated, fine grained, tr. forams.
1658-1665	Limestone: dark gray and black organic deposit, tr. chalk, v.f.-fine grained calcarenite, low perm, abundance of silt.
1665-1670	Limestone: tan-cream, calcilutite 50%, calcareous sand and silt 50%, abundant forams and cones.
1670-1690	Limestone: 50% gray, 50% tan as above.
1690-1700	Limestone: tan-cream, v.f.-fine grained calcilutite poorly indurated, abundance of silt, low perm., abundant forams,cones, snails, disks and buttons, 5 to 10% gray limestone as above.
1700-1703	Limestone: blk.-dk.grey, fissile, hard, platy, cryptocrystalline, no apparent porosity, small tan disks, forams.
1703-1708	Limestone: 70%, blk.-dk.gray as above, 30% tan-gray calcilutite, abundance of silt.
1708-1715	Limestone: tan-cream, hard, platy angular, dense, no visible porosity, low silt and sand content, potential perm., no calcite.

1715-1721	Limestone: lt-med.gray, f. grained calcarenite, poorly indurated, sandy calcareous mud, low perm., tr. forams.
1721-1725	Limestone: dk.gray, mod-well indurated, f-med. grained calcarenite, angular subrounded. 5% tan calcarenite as above with cones and forams, low silt content.
1725-1730	Limestone: beige-lt.tan, poorly-mod. indurated f.-v.f. grained calcarenite and calcilutite, low silt and chalk component.
1730-1735	Limestone: tan-cream to pale orange v.f.-f. grained calcarenite, abundant cones, silty.
1735-1740	Limestone: mostly gray with 20% black and 20% tan limestone as above, gray limestone 60%, floor rock-v.f. grain calcilutite black limestone, more well indurated.
1740-1745	Limestone: 90%, gray, poorly indurated, fine to med. grained calcarenite and calcilutite nodules, siltstone +/- 5% dark, poor-mod. indurated, tr. tan forams.
1745-1750	Limestone: 90%, gray, poorly indurated, fine to med. grain, calcilutite, tr. light gray chalk.
1750-1755	Limestone: 95%, tan to slightly gray, calcarenite with some moldic porosity of darker colors.
1755-1760	Limestone: 90%, tan to slightly gray, fine to med. grained, moldic porosity, +/- 5% white to tan forams.
1760-1765	As above with increase of forams.
1765-1770	Limestone: tan, as above, siltier.
1770-1775	Limestone: 90%, tan, silty, poorly indurated calcilutite, intergranular with some darker calcarenite limestone. 5% tan forams with tr. of conus species.
1775-1780	Limestone: 90%, tan to white, chalky, moldic, calcarenite/calcilutite, moderately indurated with dark colored limestone chips. 10% forams.
1780-1785	Limestone: 95%, large, moldic, floury, poorly indurated, light gray. Siltstone 5%, dark, large, platy.

1785-1790	Limestone: 90%, tan to light gray, moldic fine grain, floury, poorly indurated with some chalk.
1790-1795	As above.
1795-1800	Limestone: 80%, dark, well indurated, crystalline, dark forams in with lighter color limestone and chalk.
1800-1805	Limestone: 90%, light gray to tan, intergranular and moldic, calcarenite, calcilutite in a fine grain soupy/chalky matrix.
1805-1810	Limestone: 95%, light tan to brown, intergranular, moderately indurated calcilutite. 5% tan to brown forams with conus speciation.
1810-1815	Limestone: 95%, light tan to brown, intergranular porosity, poorly indurated, fine to v.fine grain. 5% tan forams, tr. siltstone.
1815-1820	Limestone: 90%, yellow-brown to gray, poorly cemented to moderate fine grain. 5% forams, tan, cylindrical, disc shaped.
1820-1825	Limestone: 80%, yellow-brown to gray, poorly cemented to moderate fine grain, calcilutite. Dolomite; 20%, gray cryptocrystalline, well indurated, calcarenite.
1825-1830	Limestone: 95%, yellow-brown, poorly cemented to moderate, fine grains, calcilutite. Tr. dolomite chips and forams.
1830-1835	Limestone: 90%, tan to light gray, poorly to moderately cemented. Tr. of dolomite and forams. Dolomite chips, crypto. to finely crystalline, gray, well indurated.
1835-1840	Limestone: 85%, yellowish brown to light gray, poorly cemented calcilutite. Some gray silty clay. 5% dolomite, gray, cryptocrystalline, well indurated, some forams.
1840-1845	As above.
1845-1850	Limestone: 100%, light gray to gray, calcarenite, well indurated, fine to moderate grain, some chalk.
1850-1855	Limestone: 90%, light gray to gray, calcilutite, calcarenite, fine graining. Siltstone; 10%, dark, ultra-fine grain, uncemented, poorly indurated.

1855-1860	Sandy limestone: 95%, tan to brown, v. poorly indurated, intergranular, nodule and platy. Limestone: 5%, white chips, moderately indurated, calcarenite.
1860-1865	Sandy limestone: 95%, tan to brown as above in a silty, tan-like matrix soup.
1865-1870	Sandy limestone: 95%, tan to brown as above mixed with white and dark limestone chips.
1870-1875	Sandy limestone: 80%, tan, limestone well cemented, as above. 10% gray chalk, gritty, clayey. 10% limestone chips, gray, calcarenite, moderately indurated.
1875-1880	Limestone: 90%, brown, calcilutite, moldic, mod. indurated, fine to medium grain. 10% coal; soft, black, oily, ultra-fine grain.
1880-1883	Limestone: 100%, tan to lt.brown, moldic, vuggy, uniform grain size, calcilutite, moderately to well indurated.
1883-1885	Limestone: 90%, fossilized, black, fossiliferous, coal-like, ultra-fine to fine grain, poorly indurated. 5% limestone; tan calcilutite, vuggy, well indurated. Tr. tan and black forams.
1885-1888	Limestone: 100%, white, to tan to gray, to dark, calcilutite, moldic, fossiliferous, poorly to well indurated, with the dark black limestone being sucrosic in texture.
1888-1890	Limestone: 100%, light gray to gray, moldic, vuggy, moderately indurated, calcilutite.
1890-1892	Limestone: 100%, gray to dark gray, moldic porosity vuggy, por to moderately indurated, calcilutite.
1892-1894	Limestone: 100%, as above with some calcarenite chips.
1894-1900	Limestone: 90%, gray, calcilutite, moldic porosity, sucrosic. 10% dolomite; dark, crypto-crystalline, well indurated, fine grain.
1900-1905	Limestone: white to very light gray, chalky, sucrosic, fine grained, silty chalk. Silty clay, gray, ultra-fine grain.

1905-1910	Limestone: 70%, white-lt.gray, as above. 20% tan limestone; carcarenite, vf.-f. grained, poorly-mod. indurated. 10% siltstone; dark grey,fissile, poorly mod indurated, tr. cones and forams.
1910-1920	Limestone: 100%, lt.gray calcilutite, vf.-f. grain, poorly-mod. indurated, no tr. cones or forams, poss. intergran. porosity, abundance of silt and clay particles, low-no perm.
1920-1930	Limestone: lt.tan, vf. grained calcilutite, abundant cones, disks and forams.
1930-1934	Limestone: lt.gray-tan calcilutite, vf. grain, v. silty and fine, murky discharge, low perm., abundant gray-tan cones.
1934-1938	Limestone: harder, med.-dk.gray, poorly sorted "rubble" character, assorted small and large(3/4") aggregates, moderately indurated calcarenite, f.g. vuggy, moldic. Some light tan v. well indurated limestone with abundant pinhole porosity and vugs, poss. worm burrows, tr. disk forams and chalk, low silt,cones.
1938-1940	Limestone: 100%, light gray, moderately indurarated vuggy, med. grain.
1940-1945	Limestone: 95%, light to dark gray, moderately to well indurated, light gray limestone; vuggy calcilutite, dark gray limestone; well indurated, fine grain, chalky gray clay 5%.
1945-1950	Limestone: 100%, light gray to tan as above.
1950-1955	Limestone: 100%, tan to light brown, vuggy, mod. to well indurated, calcilutite with tr. of gray calcarenite limestone chips.
1955-1970	As above.
1970-1975	Limestone: light gray, poorly indurated, sucrosic, ultra-fine to fine grain, calcilutite.
1975-1977	Limestone: tan, hard, well indurated, intergranular with some dark limestone chips, fine grain, well indurated.
1977-1980	Limestone: light gray to dark gray; 100%, angular, platy, well indurated, fine grain, hard.

1980-1990	Limestone: white to lt.tan calcilutite 90%, v.f.g., poorly indurated, chalky, silty, no perm, tr. cones, disks forams. 10% gray limestone as above.
1990-1999	As above.
1999-2005	Limestone: 90%, tan to lt.gray, poorly indurated, calcilutite, fine grain, sandy residue. Sandy limestone; 5%, tan, platy, sucrosic to gritty.
2005-2010	Limestone: 90%, gray to lt.gray, poorly indurated, fine grain, confining texture qualities, cal-cilutite.,with some calcarenites.
2010-2015	Limestone: 95%, light gray to tan, poorly indurated sandy grain(sucrosic), no permeablity.
2015-2025	As above.
2025-2028	Limestone: 80%, gray to dark gray, mottled, angular dolomitic, well indurated. Dolomite; dk.tan, hard, platy, cryptocrystalline, tr. brown, tr. pinhole porosity and calcite inclusions, low porosity.
2028-2032	Dolomite: 95%, brown, angular, well indurated. Limestone; 5%, light gray as above, no visible porosity, iron color stain on flat side of cut-tings, platy, hard.
2032-2040	Limestone and dolomite: dolomite; as above 50%. Limesand; 50%, lt.tan unconsolidated v.f.-f.g. calcareous sand, silty, low-no perm., abundant cones.
2040-2045	Limesand and limestone: light tan limesand and stone as above, poorly indurated, abundant cones and disks, tr. of browngray dolomite as above.
2045-2050	Limestone: 80%, tan, poorly indurated, fine grained calcilutite. Dolomite; 20%, brown, platy, no poro-sity, some calcite inclusions, angular, hard.
2050-2060	Limestone: 90%, tant poorly indurated, fine grain, calcilutite. Limestone; 10%, light gray, poorly indurated, ultra-fine grain.
2060-2082	Limestone: as above.
2082-2085	Dolomite: dark brown, hard, mostly platy, some angular , no visible porosity, cryptocrystalline.
2085-2087	Dolomite: 100%, dark gray, hard, platy, no visibly porosity, cryptocrystalline and angular.

2087-2088	Dolomite: 100%, dark gray to brown, angular, no visible porosity, cryptocrystalline, angular.
2088-2090	Limestone: 100%, poorly to moderately indurated, ultra-fine to fine grain, white to tan.
2090-2095	Limestone: white lt.-tan, poorly indurated, v.f.-f.grain, 10% dolomite as above.
2095-2100	Dolomite: lt.brown, platy, hard, cryptocrystalline, some dark brown, some pinhole porosity, low porosity, well indurated.
2100-2105	Dolomite: med. dark gray, platy, fissile, hard, tr. concoidal fractures, tr. vugs, low visible porosity.
2105-2110	Dolomite: dark brown, hard, platy-angular, low-no porosity.
2110-2115	Dolomite: dark gray, platy, hard, cuttings v. small with no visible porosity, however one large +/- 2" long piece had obvious sucrosic pinhole porosity (vesicular), v. porous and permeable. Also tr. dark brown dolomite, v. porous, v. perm., friable.
2116-2117	Note: 1 foot void between v. hard rock. Drill rod fell abruptly(cavity).
2115-2120	Dolomite: 50%, dk.gray-blk. to dark tan, sucrosic, extremely porous, angular-subangular, sponge-like. Also same color dolomite 50%, platy, fissile, hard, no porisity, 1 to 2' stringer of limestone, white-lt. tan, calcilutite, fairly indurated, low perm. and porosity.
2120-2130	Dolomite: brown, hard, alternating platy and subangular, sucrosic, porous, vuggy.
2130-2137	Dolomite: black and brown, brown; sucrosic and porous. Black; dolomite, low porosity, hard platy.
2137-2148	Dolomite: 80%, lt.brown-dark tan, alternating hard, fissile, platy, cryptocrystalline. Dolomite; brown to dark gray, sucrosic, poorly to mod. indurated, sponge-like porosity, color grades from med.lt. brown to gray.
2148-2150	Dolomite: 50%, med.dk.gray, hard, platy-subangular, dense, no visible porosity, cryptocrystalline. Dolomite; 50%, black, sucrosic, slightly vuggy, crystalline, hard, well indurated.

2150-2154	Dolomite: tan-lt.brown, sucrosic, mod.-well indurated, sponge-like porosity, v. porous, as above tan dolomite.
2154-2157	Dolomite: 100%, brown to lt.gray to gray, cryptocrystalline, platy, with some sucrosic specimens, salty taste, well indurated, sponge-like, hard.
2157-2159	Dolomite: 95%, black and gray to dk.gray, finely crystalline, platy, pinhole porosity, hard, well indurated, mottled. Dolomite 5%, tan, lustery.
2159-2160	Dolomite: 50%, tan-lt.brown, sucrosic, lustery, v. fine grained, mod. indurated, pinhole porosity, very porous and some hard, crystalline, no visible porosity. 50% dk.gray-black, mottled dolomite, crystalline, pinhole porosity.
2160-2162	Dolomite: lt.brown-tan and gray with some black and white, hard, platy, cryptocrystalline, pinhole porosity, tan-gray dolomite has calcite filled vugs and inclusions.
2162-2175	Dolomite: lt.orange-brown, 1/2 no visible porosity, platy, angular, cryptocrystalline, 1/2 brown dolomite is sucrosic, high porosity, mod. indurated. 10% gray dolomite, 5% black coal, friable, black residue.
2175-2180	Dolomite: 70%, lt.orange to brown, some pinhole porosity, well indurated, sponge-like. 20% white limestone calcilutite, poorly indurated, fine grain. 10% black coal, soft, oily residue.
2180-2185	Limestone: 60%, white, poorly indurated, ultra to fine grain, oolitic, tr. cones, echinoderms. 40% dolomite; brown to gray, hard, no visibly porosity, platy.
2185-2218	Limestone: pale-white to white-tan, v. chalky and f.g., poorly indurated, low-no perm., tr. cones, abundant echinoderms(sea biscuits) from 1/4" to 3/4" in diameter, oval, round.
2218 T.D.

APPENDIX C – PACKER TEST DATA SHEETS AND ANALYSES

PACKER TEST NO. 1 (2,120 – 2,142' BLS)

Background Data		
Packer Test No.: 1	Date:02/17/93	Interval Tested: 2120 - 2142 ft
Static Water Level (G.L.) before pumping: -1.6 ft		After Recovery: -1.6 ft
Measuring Point Distance to Kelly Bushing: +2.1 ft TOC		
Distance from G.L. to Rig's Kelly Bushing: 10.0 ft		
Maximum Drawdown During Pumping: 14 ft with pipe loss, 0.2 ft aquifer loss		
Total Pumping Time: 120 minutes		Average Pumping Rate: 110 gpm
Min. Pumping Rate: 100 gpm		Max. Pumping Rate: 120 gpm
Pump Type: 4" submersible, 3 hp		
Depth to Pump Intake from Kelly Bushing: 100 ft		
I.D. Drill Pipe: 3.5 in	Tester: Baker	Driller: R.S.T. Inc.
Hermit #		
Input #1 Transducer #: 3047	Range: 30 psi	Depth: 70 ft below W.L.
Input #2 Transducer #: 137	Range: 10 psi	Depth: 20 ft below W.L.
Time Pumping Started: 1510	Time Pumping Ended: 1710	Total Pumping Time: 120 min
Aquifer Analysis		
Transmissivity:	Hydraulic Conductivity:	
Method of Analysis:		
Software Used: AQTESOLV		
Specific Capacity: 550 gpm/ft		
Friction Loss (Observed): approx. 13.8 ft		
Static Head:-1.6 ft G.L.		
Water Quality		
Field Parameters	***Major Ion Concentrations***	
Cond.: 47,200	*Cations (mg/L)*	*Anions (mg/L)*
TDS: 32	Ca = 578	Alka = 348
Temp: 20.3^{o}C	Mg = 1286	Cl = 17,103
pH: 6.9	Na = 9880	SO_4 = 2659
D.O.: 7.5	K = 437	SiO_2 = 5.5
	Tot Fe = 0.971	
Definitions		
G.L. = ground level	I.D. = inner diameter	W.L. = water level
TOC = top of casing	hp = horsepower	

Comments:
Test 0: Background before pump started (time: 1320 to 1500)
Test 1: Drawdown data - head decreased as well was pumped due to increased water density
Test 2: Recovery data, used for analysis
Initial static head of +3.8 ft G.L. not correct due to lighter hydrostatic pressure in pipe from low salt water (mix).

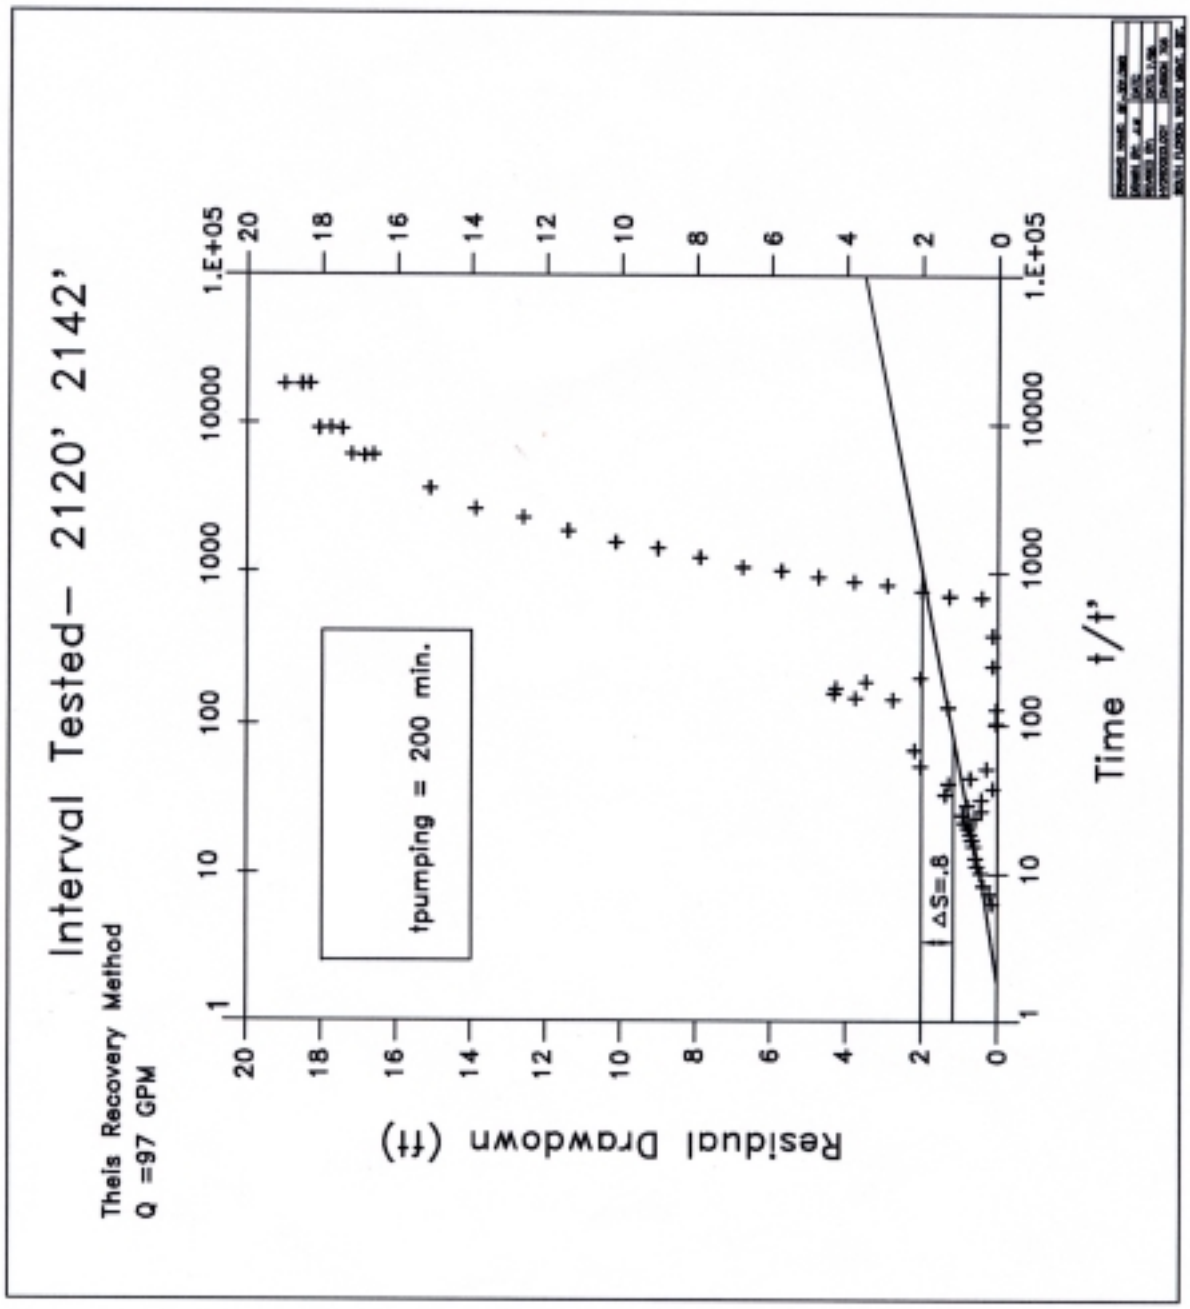

Figure C.1 - Straddle-Packer Test No. 1 (2,120-2,142' bls)

PACKER TEST NO. 2 (2,078 – 2,088' BLS)

Background Data		
Packer Test No.: 2	Date:02/19/93	Interval Tested: 2078 - 2088 ft
Static Water Level (G.L.) before pumping: +3.8 ft		After Recovery: -0.4 ft
Measuring Point Distance to Kelly Bushing: +2.2 ft TOC		
Distance from G.L. to Rig's Kelly Bushing: 10.0 ft		
Maximum Drawdown During Pumping: 63.95 ft		
Total Pumping Time: 1046 minutes		Average Pumping Rate: 4.5 gpm
Min. Pumping Rate: 4 gpm		Max. Pumping Rate: 5 gpm
Pump Type: 4" submersible, 3 hp		
Depth to Pump Intake from Kelly Bushing: 100 ft		
I.D. Drill Pipe: 3.5 in	Tester: Baker	Driller: R.S.T. Inc.
Hermit # 2		
Input #1 Transducer #: 3047	Range: 30 psi	Depth: 20 ft
Input #2 Transducer #: none	Range:	Depth:
Time Pumping Started: 1530	Time Pumping Ended: 0900	Total Pumping Time: 1046 min
Aquifer Analysis		
Transmissivity:	Hydraulic Conductivity:	
Method of Analysis:		
Software Used: AQTESOLV		
Specific Capacity: 0.7 gpm/ft		
Friction Loss (Observed): 0		
Static Head:-0.4 ft G.L.		
Water Quality		
Field Parameters	***Major Ion Concentrations***	
Cond.: 47,200	*Cations (mg/L)*	*Anions (mg/L)*
TDS: 34,300	Ca = 700	Alka = 312.9
Temp: 24.8 °C	Mg = 1200	Cl = 18,972
pH: 6.6	Na = 10,600	SO_4 = 2847
D.O.: 2.0	K = 390	SiO_2 = 4.9
Sulfides: 2	Tot Fe = 5.58	TDSFe = 2.29
		Hardness = 6690
Definitions		
G.L. = ground level	I.D. = inner diameter	W.L. = water level
TOC = top of casing	hp = horsepower	

Comments:
Yield was so low pump was left on overnight. Initial static head level suspect due to different water quality in borehole over it, before zone was developed.

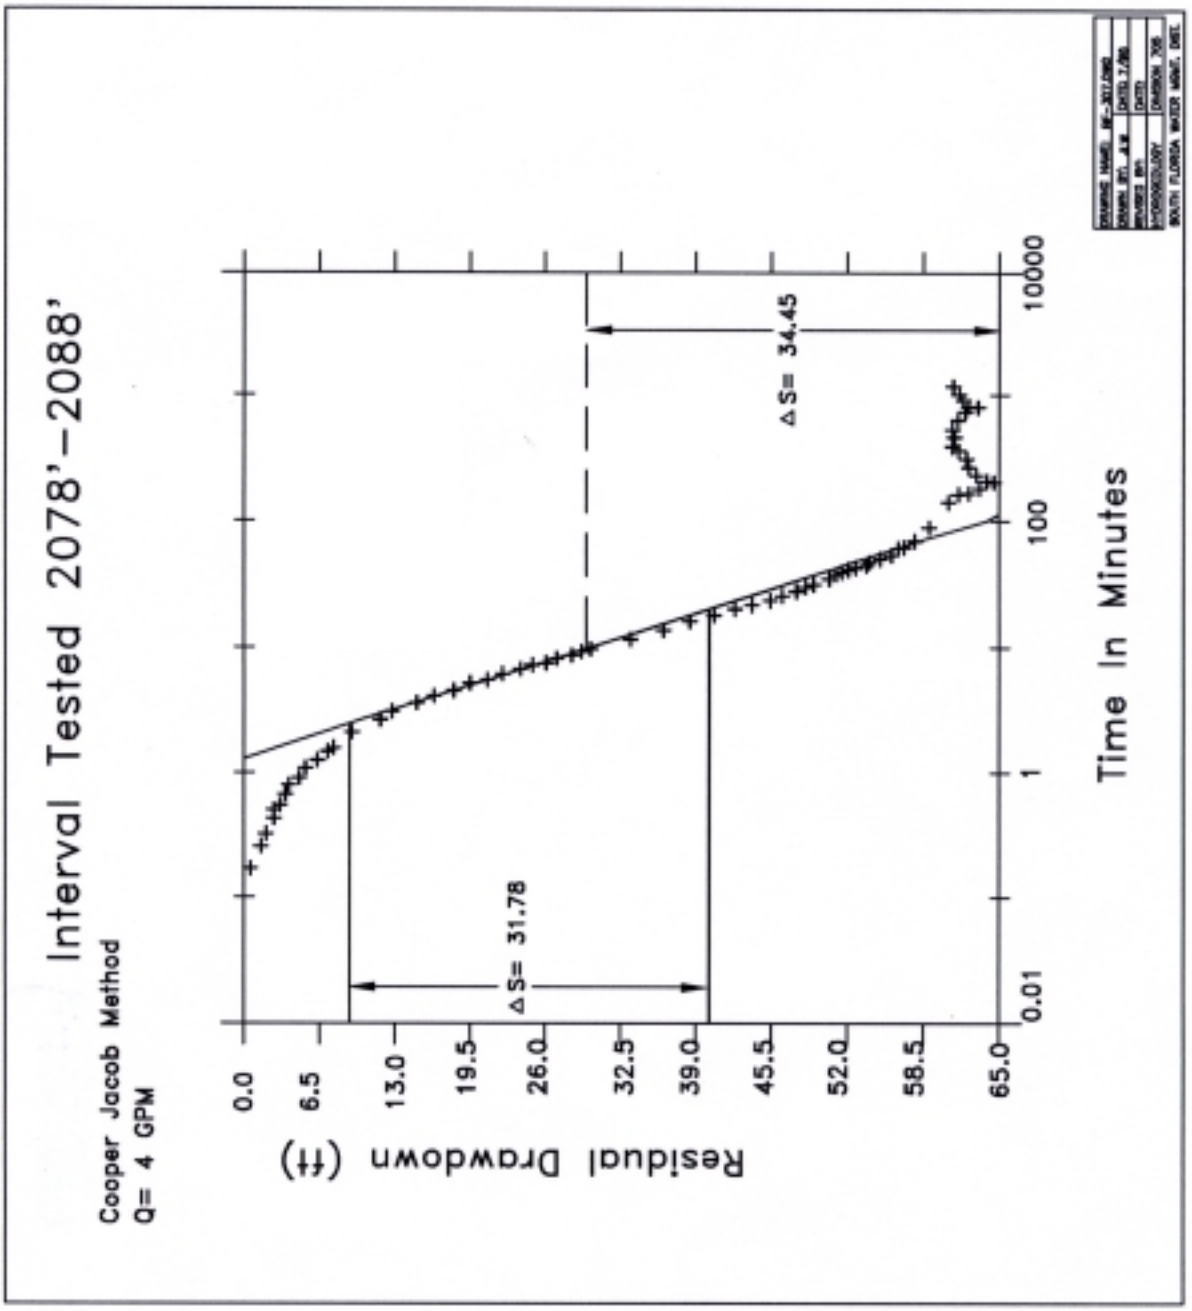

Figure C.2 – Straddle-Packer Test No. 2 (2,078-2,088' bls)

PACKER TEST NO. 3 (1,726 – 1,726' BLS)

Background Data		
Packer Test No.: 3	Date:02/23/93	Interval Tested: 1726 - 1772 ft
Static Water Level (G.L.) before pumping: +26 ft		After Recovery: +3 ft (real head)
Measuring Point Distance to Kelly Bushing: 29.35 ft (TOC-KB)		
Distance from G.L. to Rig's Kelly Bushing: 10.0 ft		
Maximum Drawdown During Pumping: 22.0 ft		
Total Pumping Time: 145 minutes		Average Pumping Rate: 74 gpm
Min. Pumping Rate: 73 gpm		Max. Pumping Rate: 98 gpm
Pump Type: 4" submersible, 3 hp		
Depth to Pump Intake from Kelly Bushing: 93 ft		
I.D. Drill Pipe: 3.5 in	Tester: Baker	Driller: R.S.T. Inc.

Specific Capacity: 37 gpm/ft (corrected)		
Friction Loss (Observed): approx. 11 ft		
Static Head: +3 ft G.L.		
Water Quality		
Field Parameters	***Major Ion Concentrations***	
Cond.: 43,900	*Cations (mg/L)*	*Anions (mg/L)*
TDS: 31,300	Ca = 620	Alka = 6.37
Temp: 20.2 °C	Mg = 1062	Cl = 17,268
pH: 7.0	Na = 9460	SO_4 = 2307
D.O.: 3.6	K = 340	SiO_2 = 5.8
	Tot Fe = 1.67	Turbidity = 12.8 ntu
	TDSFe = 0.957	Hardness = 5920
Definitions		
G.L. = ground level	I.D. = inner diameter	W.L. = water level
TOC = top of casing	hp = horsepower	

Comments:
Head decreased after zone was pumped due to increased water density in pipe. Test lower portion saltwater interface.

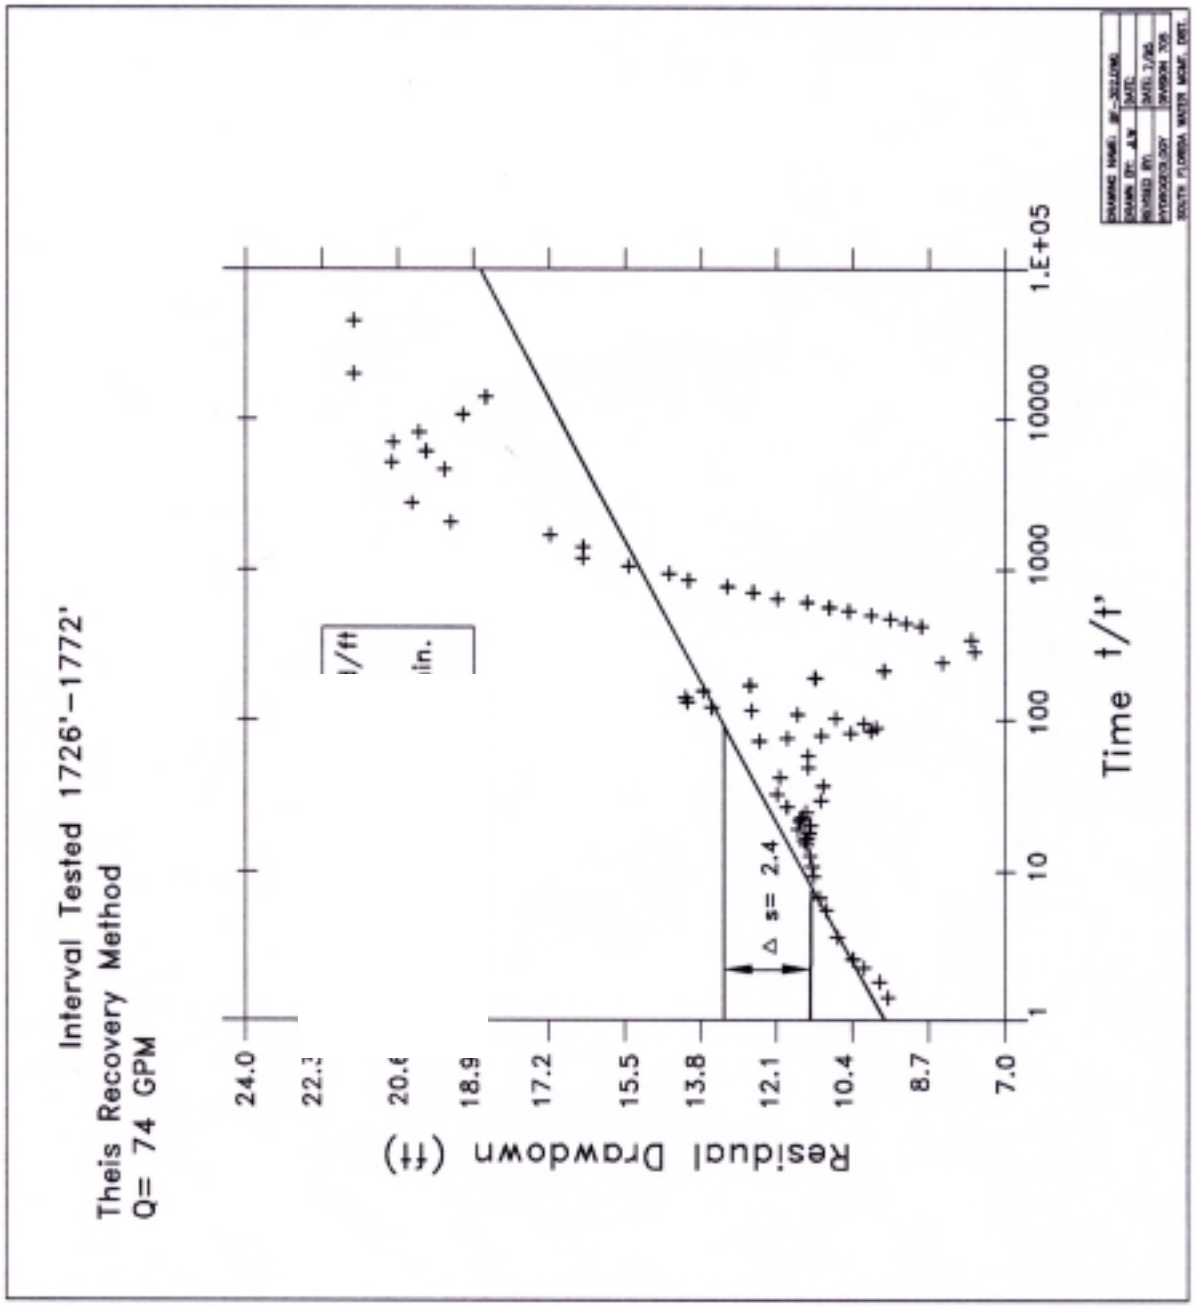

Figure C.3 – Straddle-Packer Test No. 3 – (1,726-1,772' bls)

PACKER TEST NO. 4 (1,644 – 1,690’ BLS)

Background Data		
Packer Test No.: 4	Date:02/24/93	Interval Tested: 1644 - 1690 ft
Static Water Level (G.L.) before pumping: +5.7 ft		After Recovery: +29 ft
Measuring Point Distance to Kelly Bushing: +30 ft TOC		
Distance from G.L. to Rig's Kelly Bushing: 10.0 ft		
Maximum Drawdown During Pumping: 33.3 ft		
Total Pumping Time: 200 minutes		Average Pumping Rate: 63 gpm
Min. Pumping Rate: 54 gpm		Max. Pumping Rate: 84 gpm
Pump Type: 4" submersible, 3 hp		
Depth to Pump Intake from Kelly Bushing: 60 ft		
I.D. Drill Pipe: 3.5 in	Tester: Baker	Driller: R.S.T. Inc.
Hermit # 2		
Input #1 Transducer #: 3047	Range: 30 psi	Depth: 85 ft (dd) / 35 ft (rc)
Input #2 Transducer #: 137	Range: 10 psi	Depth: 85 ft (dd) / 35 ft (rc)
Time Pumping Started: 1431	Time Pumping Ended: 1820	Total Pumping Time: 200 min
Aquifer Analysis		
Transmissivity:	Hydraulic Conductivity:	
Method of Analysis:		
Software Used: AQTESOLV		
Specific Capacity: 63 gpm/ft		
Friction Loss (Observed):		
Static Head: 29 ft G.L.		

Water Quality		
Field Parameters	***Major Ion Concentrations***	
Cond.: 13,950	*Cations (mg/L)*	*Anions (mg/L)*
TDS: 8920	Ca = 380	Alka = 193
Temp: 21.6 ^{o}C	Mg = 214	Cl = 4695
pH: 7.4	Na = 2640	SO_4 = 750
D.O.: 4.5	K = 92	SiO_2 = 11.8
	TDS Fe = 0.651	Tubidity = 8.1 ntu
	TotFe = 0.9	
	Color = 22	Hardness = 1830

Definitions		
G.L. = ground level	I.D. = inner diameter	W.L. = water level
TOC = top of casing	hp = horsepower	dd = drawdown
		rc = recovery

Comments:
Head initially fell 70 ft, then rebounded in response to fresher water occupying drill stem. Transducers moved up pipe for recovery. Test 1 not useful, water level over TOC in recovery. Recovery data questionable because well was pumped 200 min, shut down for recovery, W.L. rose above TOC, pumped again w/ standpipe connected for extension, then recovery resumed.

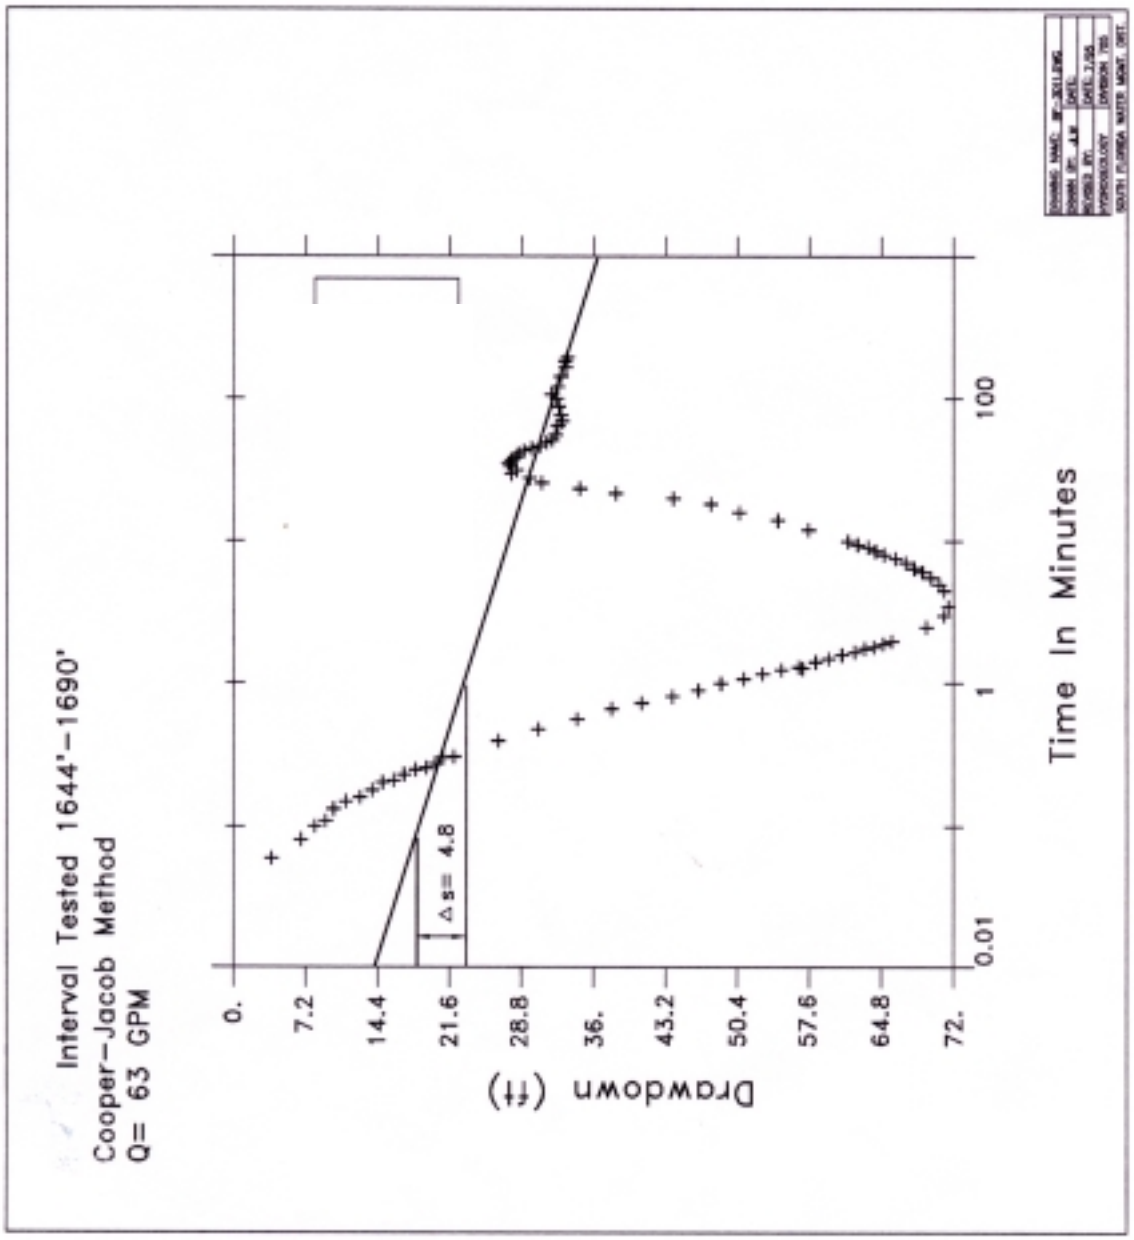

Figure C.4 – Straddle-Packer Test No. 4 – (1,644-1,690’ bls)

PACKER TEST NO. 5 (1,494 – 1,540' BLS)

Background Data		
Packer Test No.: 5	Date:02/26/93	Interval Tested: 1494 - 1540 ft
Static Water Level (G.L.) before pumping: +29 ft		After Recovery: +28.76 ft
Measuring Point Distance to Kelly Bushing: 30ft TOC to KB		
Distance from G.L. to Rig's Kelly Bushing: 10.0 ft		
Maximum Drawdown During Pumping: 9.7 ft aquifer loss		
Total Pumping Time: 230 minutes		Average Pumping Rate: 64 gpm
Min. Pumping Rate: 60 gpm		Max. Pumping Rate: 90 gpm
Pump Type: 4" submersible, 3 hp		
Depth to Pump Intake from Kelly Bushing: 70 ft		
I.D. Drill Pipe: 3.5 in	Tester: Baker	Driller: R.S.T. Inc.
Hermit # 1		
Input #1 Transducer #: 3047	Range: 30 psi	Depth: 120 ft TOC (dd)/45 ft (rc)
Input #2 Transducer #: 137	Range: 10 psi	Depth: 70 ft TOC (dd)/60 ft (rc)
Time Pumping Started: 0857	Time Pumping Ended: 1248	Total Pumping Time: 230 min
Aquifer Analysis		
Transmissivity:	Hydraulic Conductivity:	
Method of Analysis: Theis Recovery		
Software Used: AQTESOLV		
Specific Capacity: 45.7 gpm/ft		
Friction Loss (Observed): 8.3 ft		
Static Head: +29 ft G.L.		
Water Quality		
Field Parameters	***Major Ion Concentrations***	
Cond.: 11,330	*Cations (mg/L)*	*Anions (mg/L)*
TDS: 8340	Ca = 380	Alka = 201
Temp: 22 °C	Mg = 190	Cl = 4167
pH: 7.2	Na = 2460	SO_4 = 844
D.O.: 5.0	K = 86	SiO_2 = 11.6
	Tot Fe = 1.1	Turbidity = 55 ntu
	TDSFe = 0.375	Color = 14
Definitions		
G.L. = ground level	I.D. = inner diameter	W.L. = water level
TOC = top of casing	hp = horsepower	dd = drawdown
		rc = recovery

Comments:
Set new reference for Hermit before starting recovery test. Discharge rate was not consistent during pumping (fluttered). Head during pumping fluctuated 3 - 6 inches over 2 min intervals.

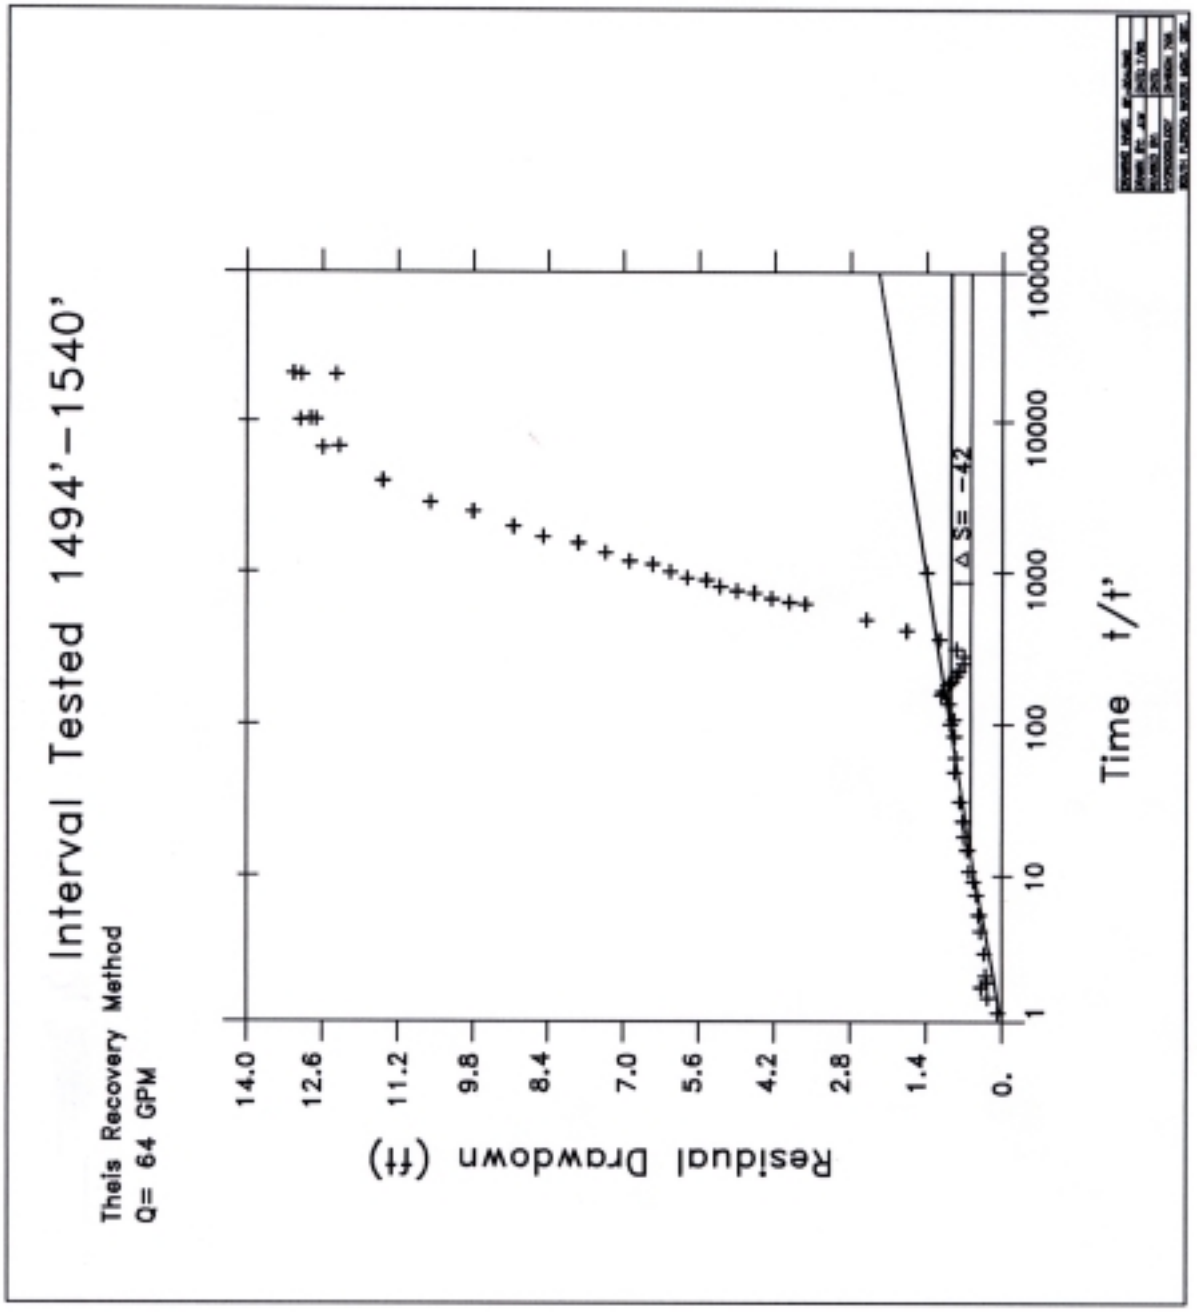

Figure C.5 – Straddle-Packer Test No. 5 – (1,494-1,540' bls)

PACKER TEST NO. 6 (1,000 – 1,031' BLS)

Background Data		
Packer Test No.: 6	Date:03/01/93	Interval Tested: 1000 - 1031 ft
Static Water Level (G.L.) before pumping: +30 ft		After Recovery: +30.7 ft
Measuring Point Distance to Kelly Bushing: 33.7 ft KB to TOC		
Distance from G.L. to Rig's Kelly Bushing: 10.0 ft		
Maximum Drawdown During Pumping: 7 ft total, 1.4 ft aquifer loss		
Total Pumping Time: 210 minutes		Average Pumping Rate: 65 gpm
Min. Pumping Rate: 50 gpm		Max. Pumping Rate: 92 gpm
Pump Type: 4" submersible, 3 hp

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
TAMARAC MOTOR POOL	22ND AVENUE	SE 1/4 - 1/2 (0.425 mi.)	10	47

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there are 3 SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's PCTO1--Petroleum Contamination Detail Report.

A review of the LUST list, as provided by EDR, and dated 07/22/2024 has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

ENG CONTROLS: The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass avariety of engineered remedies to contain and/or reduce , contamination , and/or physical barriers intended to limit access to property ECs include fences, signs, guards, landfill caps, provision of potable water , slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

A review of the ENG CONTROLS list, as provided by EDR, and dated 06/24/2024 has revealed that there is 1 ENG CONTROLS site within approximately 0.5 miles of the target property.

Lists of state and tribal brownfield sites

BROWNFIELDS: Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination.

A review of the BROWNFIELDS list, as provided by EDR, has revealed that there is 1 BROWNFIELDS site

within approximately 0.5 miles of the target property.

Hazardous Waste Summary:

Waste Code:	F027
Waste Description:	Discarded Unused Formulations Containing Tri-, Tetra-, Or Pentachlorophenol Or Discarded Unused Formulations Containing Compounds Derived From These Chlorophenols. (This Listing Does Not Include Formulations Containing Hexachlorophene Synthesized From Prepurified 2,4,5-Trichlorophenol As The Sole Component.)
Waste Code:	P058
Waste Description:	Acetic Acid, Fluoro-, Sodium Salt (Or) Fluoroacetic Acid, Sodium Salt
Waste Code:	P072
Waste Description:	Alpha-Naphthylthiourea (Or) Thiourea, 1-Naphthalenyl-
Waste Code:	P108
Waste Description:	Strychnidin-10-One, & Salts (Or) Strychnine, & Salts
Waste Code:	P122
Waste Description:	Zinc Phosphide Zn3p2, When Present At Concentrations Greater Than 10% (R,T)
Waste Code:	U036
Waste Description:	4,7-Methano-1h-Indene, 1,2,4,5,6,7,8,8-Octachloro-2,3,3a,4,7,7a-Hexahydro- (Or) Chlordane, Alpha & Gamma Isomers
Waste Code:	U067
Waste Description:	Ethane, 1,2-Dibromo- (Or) Ethylene Dibromide

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

ORPHAN SUMMARY

City	EDR ID	Site Name	Site Address	Zip	Database(s)
		NO SITES FOUND			

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024
Date Data Arrived at EDR: 10/01/2024
Date Made Active in Reports: 10/23/2024
Number of Days to Update: 22

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal brownfield sites

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910’s through the 1950’s, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

DADE CO LW: Liquid Waste Transporter List
The Liquid Waste Transporter permit regulates the transportation of various types of liquid and solid waste, including hazardous waste, waste oil and oily waste waters, septic and grease trap waste, biomedical waste, spent radiator fluid, photo chemical waste, dry sewage sludge, and other types of non-hazardous industrial waste. The Liquid Waste Transporter permits needed to protect the environment and the public from improperly handled and transported waste.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/05/2024
Date Data Arrived at EDR: 08/06/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health

UTM Y (Meters):	2894958.8
Elevation:	3 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	17176293 FORT LAUDERDALE NORTH, FL
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

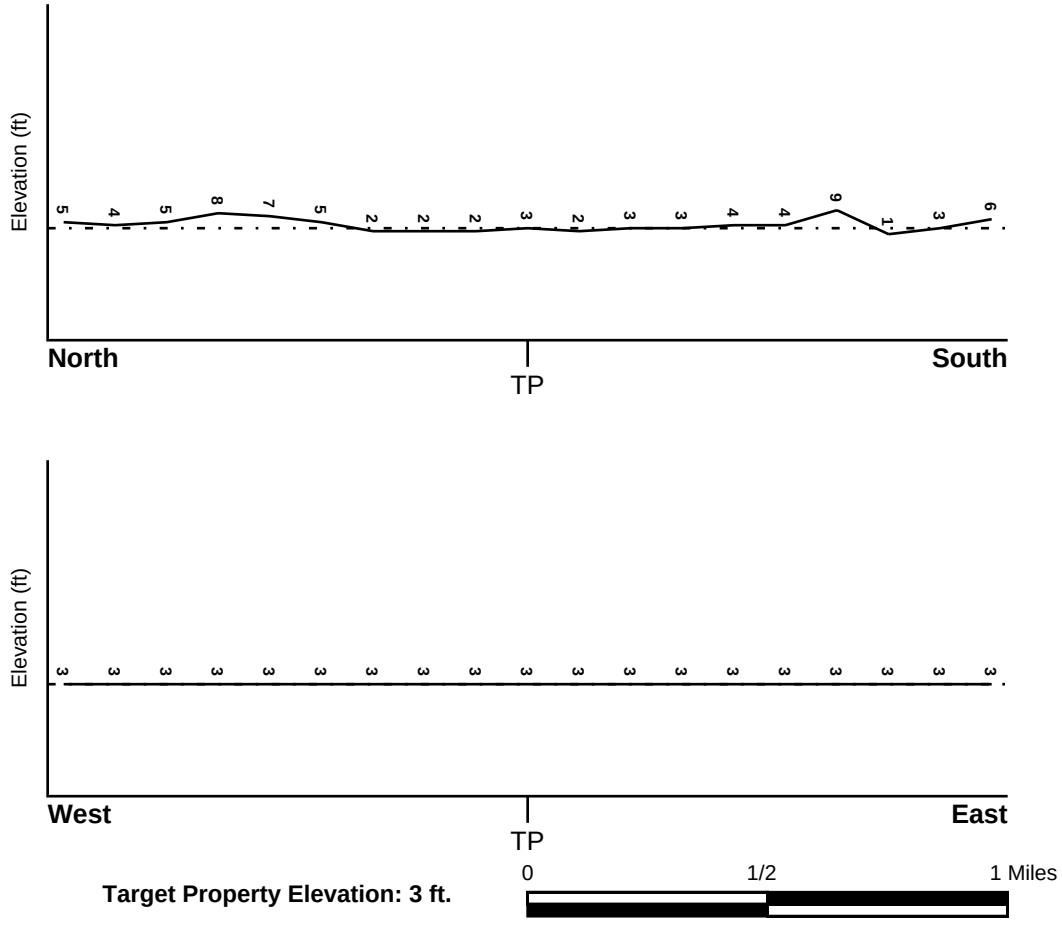
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
12011C0366H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

12011C0362H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FORT LAUDERDALE NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

4G	1/2 - 1 Mile SW	N-NE
5G	1/2 - 1 Mile SW	ESE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: Udorthents

Soil Surface Texture: cobbly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	57 inches	cobbly sand	Not reported	Not reported	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: Matlacha

Soil Surface Texture: gravelly sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 76 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	gravelly sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	22 inches	44 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	44 inches	48 inches	fine sandy loam	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
4	48 inches	48 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Babu Madabhushi, PhD

Years of experience
31 total | 25 with AECOM

Babu has 31 years of experience in conducting and managing environmental engineering projects. His technical expertise is in the areas of conducting contamination assessment, evaluation, water/wastewater treatment, groundwater treatment, remedial system operation and maintenance.

Babu is extremely knowledgeable of FDOT District Four, Florida's Turnpike Enterprise, DERM, FDEP and local regulations and standards. His expertise also encompasses sediment characterization, dredge design, RCRA Facility Investigation, contamination assessment, impact assessment, remedial investigation and feasibility studies, soil and groundwater remediation, in-situ bioremediation, and operation and maintenance of remedial systems.

Professional experience

Contamination Assessment and Remediation Services - BEE68, FDOT District Four (2022 – Present). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Assessment and Remediation Services - BE678, FDOT District Four (2020 – 2022). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Evaluation and Screening -PD&E Studies, FDOT District Six, Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, Miami Gardens to County Line), St. Lucie (SR-80), Martin, and Monroe (US-1) Counties, FL (2003 – 2021). Developed CSER for more than 30 project locations and Re-Evaluation Reports for several FDOT projects in Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, I-95), St. Lucie (SR-80), Martin, and Monroe (US-1) counties.

SR-826/Palmetto Expressway from north of NW 25th St to North of NW 104th St CSER, FDOT District Six, Miami-Dade County, FL (2022 – 2024). Contamination lead for the FDOT PLEMO with environmental assessment support services for the SR-826/Palmetto Expressway CSER. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential.

SR-826/Palmetto Expressway from South of NW 25th St to North of NW 154th St SEIR, FDOT District Six, Miami-Dade County, FL (2020 – 2021). Contamination Lead to provide the FDOT PLEMO with environmental assessment support services for the SR 826 / Palmetto Expressway SEIR. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential**.**

I-95 from South of NW 10th St to North of Hillsboro Boulevard, FDOT District Four, Broward County, FL (2017 – 2021). Contamination Lead for environmental tasks associated with the performance of a PD&E Study. Tasks include Contamination Lead to provide the FDOT PLEMO with environmental assessment support services. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential**.**

Education

PhD, Hazardous Waste Management, West Virginia University, 1997
MS, Wastewater Treatment, Indian Institute of Technology, 1993
BS, Civil Engineering, Kakatiya University, 1988

Expertise

CAR Project Manager
Contamination Assessment
Remedial Design
Remedial Action Implementation
Water/Wastewater Treatment
Groundwater Treatment
Remedial System Operation and Maintenance
Sediment Characterization

Training

40-hr OSHA HAZWOPER
8-hr OSHA HAZWOPER Annual Refresher

Registrations/Certifications

AECOM Certified Project Manager
AECOM Lead Verifier: In Situ Bioremediation

SR-826/Palmetto Expressway from US-1 (SR-5) to SR-836 / Dolphin Expressway, FDOT District Six, Miami-Dade County, FL (2018 – Present). Contamination lead for environmental tasks associated with the performance of an approximate 7-mile PD&E Study**.** Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

I-75 from Miami-Dade County Line to SR-826 (Palmetto Expressway) PD&E Study, FDOT District Six, Miami-Dade County, FL (2007 – Present). Contamination lead for the performance of a PD&E Study. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

Wagner Creek/Seybold Canal Contaminated Sediment Dredging and Disposal (2017 – Present). Managed this critical project in a heavily commercialized area near Jackson Hospital. This included sediment dredge design, permitting, contaminated sediment characterization/handling, sediment stabilization, turbidity control and disposal at out of state landfill. Won multiple awards (from FDEP and other entities) for successfully completing this under budget and within schedule without harming the manatees.

Former Eaker Air Force Base Remediation, U.S. Air Force, Blytheville, AR (2011 – 2021). Project manager for this performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Eaker AFB. The sites are contaminated with petroleum compounds, light non-aqueous phase liquid, chlorinated solvents, and arsenic. Services include remedial investigation, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Miami Dade DERM-14/E20 Contracts, Miami-Dade Aviation Department, Miami International Airport, Opa Locka Airport, Public Housing, Northwest Cargo Area, Miami, FL (2002 – 2021). Managed several projects that included delineation of petroleum, chlorinated solvent, and metals contamination at these properties. Installed several deep nested wells to delineate contamination in various zones of the aquifer. Multiple wells were installed in the vicinity of the runways, in the public right of way, and in the vicinity of residential areas. Currently overseeing the long-term groundwater monitoring activities.

Former Homestead Air Force Base Remediation, US Air Force, Homestead, FL (2011 – 2021). Deputy project manager for a performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Homestead AFB. The sites are contaminated with petroleum compounds, chlorinated solvents, and arsenic. Services include remedial investigation, preparation of Explanation of Significant Differences (ESD) to Record of Decision (ROD) document, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, storage tank removal, remedial design modifications, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Contamination Evaluation Studies, FGT, Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe Counties, FL, (2006 – Present). Contamination Specialist, responsible for developing contamination evaluation reports and Contingency Plans for numerous project locations in Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe counties for projects associated with hydrotesting, pipeline maintenance/repairs and pipeline abandonment work.

Blue Lagoon Post Office Site Assessment, Remediation, and Methane Collection System, US Postal Service, Miami, FL (2003 – Present). Project Manager/Senior Environmental engineer for contamination assessment at a facility constructed over a filled-in canal where lead was found in the soil above state cleanup levels. Work included soil and groundwater remediation activities and methane gas collection system design and monitoring. Currently, AECOM is performing natural attenuation monitoring and methane gas monitoring.

Remediation Engineering, Federal Aviation Administration (FAA), William J. Hughes Technical Center, Atlantic City, NJ (2005 – 2012). Remediation engineering task leader for operation and maintenance of treatment systems for approximately 5,000-acre CERCLA Superfund site at Areas B, D, 20A, 29, and Area 41. Assisted with operation and maintenance of the existing Central Treatment Plant (Pump and Treat System) to treat petroleum contaminated water. Provided innovative remediation enhancements, such as in-situ aerobic bioremediation of petroleum compounds and reductive dechlorination of chlorinated solvents, contaminated soil removal, vapor extraction, groundwater and soil investigations, GIS mapping and support, groundwater modeling, and routine regulatory interaction.

Executive Summary

South Florida Water Management District (SFWMD) contracted with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the S37A Gated Spillway Facility identified by Broward County Parcel Identification Numbers (PINs) 4942-11-00-0480 (portion), 4942-11-00-0490 (portion), 4942-11-00-0500 (portion), 4942-11-00-0520 (portion), and 4942-11-00-0530 (portion), Pompano Beach, Broward County, Florida (subject property). This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21). Exceptions to, or deletions from, this practice are described in this report.

The site visits occurred on January 10, 2025 (exterior portions and surrounding area) and January 22, 2025 (interior of onsite buildings). The approximate 7.9-acre subject property encompasses an estimated 4.6 acres of the Cypress Creek Canal, a gated spillway structure, S37A, and a small, single-story control building that houses electrical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically, or telemetry controlled. The eastern and western portions of the subject property are occupied by the Cypress Creek Canal. One (1) underground storage tank (UST) containing propane of an unknown quantity was observed onsite during the site reconnaissance. No visual potable water wells, monitoring wells, clarifiers, dry wells, septic tanks, or leach fields were observed during the site visit.

The subject property is located in a mixed-use area of residential and commercial properties within the city of Pompano Beach. South Dixie Highway and the Florida East Coast (FEC) Railway run through the central portion of the subject property. The subject property is bordered to the northwest by residential single-family homes and various commercial businesses, including Patrice Income Tax Service, Marine Canvas America, Jackie Lee Beauty Studio and self-storage spaces, and bordered to the northeast by KD Construction and residential single-family homes. The subject property is bordered to the east by the Cypress Creek Canal followed by residential properties. The subject property is bordered to the southwest by residential single-family homes and to the southeast by Pine Crest School. The subject property is bordered to the west by the Cypress Creek Canal and residential single-family homes. Gasoline service stations and dry cleaners were not observed in the immediate vicinity (approximately 500 feet) of the subject property. Other off-site sources of concern were not identified in the immediate vicinity.

A review of historical aerial photographs indicates that the subject property was developed with the FEC Railway and Dixie Highway from at least 1940. The Cypress Creek Canal is also depicted with dense vegetation encroaching the narrow canal system during this time. By at least 1957, the dense vegetation surrounding the northwestern portion of the Cypress Creek Canal has been removed. By at least 1958, significant canal improvements, such as canal widening and slope enhancements on the south side of the canal, are depicted. Additionally, road improvements to Dixie Highway are depicted. By at least 1961, the remaining vegetation on the north side of the canal is no longer depicted. During this time, the spillway structure, S37A, situated within the canal and the control building, on the eastern portion of the subject property, are depicted. By at least 1992, additional road improvements to Dixie Highway are depicted. By at least 2007, road base material is depicted in the area surrounding the control building. The subject property has remained in its current configuration (as observed during AECOM's site visit) since at least 2007. No recognized environmental conditions (RECs) were identified based on the historical review.

The subject property was not identified on the Environmental Data Resources, Inc. (EDR) environmental database search report obtained for this project. Several surrounding sites were identified in the EDR report. However, the majority of these sites were listed on non-contamination-related databases. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present a REC to the subject property. This was determined based on absence of documented contamination, distance (generally greater than 500 feet), regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the subject property (i.e., down-gradient or cross-gradient).

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Based on the above-described circumstances, no RECs, controlled RECs (CRECs), historical RECs (HRECs), significant data gaps or de minimis conditions (DMCs) were identified in connection with the subject property.

In addition, no vapor encroachment conditions (VECs) were identified during completion of a Tier 1 vapor encroachment screening (VES) following ASTM International, Designation: E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated May 2022 (ASTM E2600-22).

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (Phase I ESA) was performed pursuant to AECOM Technical Services, Inc. (AECOM's) written proposal, dated October 30, 2024, and Contract No. 4600004507-Work Order No. 14, for the S37A Gated Spillway Facility identified by Broward County Parcel Identification Numbers (PINs) 4942-11-00-0480 (portion), 4942-11-00-0490 (portion), 4942-11-00-0500 (portion), 4942-11-00-0520 (portion), and 4942-11-00-0530 (portion), Pompano Beach, Broward County, Florida (herein referred to as the "subject property"). This assessment was performed in advance of the potential spillway improvements at the subject property.

The purpose of this Phase I ESA is to provide the SFWMD with information for use in RECs associated with the subject property. Per ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), de minimis conditions (DMCs) and significant data gaps as follows:

- A REC is defined by the ASTM standard as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.
- A HREC is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority and meeting unrestricted use criteria established by a regulatory authority or authorities without subjecting the subject property to any required controls.
- A CREC is defined as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (activity and use limitations or other property use limitations).
- DMCs are conditions related to a release that generally do not present a threat to human health or the environment and generally would not be subject to enforcement action if brought to the attention of the appropriate governmental agencies.
- A significant data gap is a data gap that affects the ability of the environmental professional to identify a REC.

In addition, a Tier 1 vapor encroachment screening (VES) is completed as part of this assessment. This screening is conducted in general accordance with ASTM International, Designation: E2600-22, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions dated May 2022 (ASTM E2600-22). The objective of the VES is to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

1.2 Scope of Work

The Phase I ESA included a site visit, interviews, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property. Non-Scope Services per ASTM E1527-21 including, but not limited to, asbestos, lead paint, radon, floodplains and wetlands were not included in the scope of work. On April 17, 2024, EPA signed the final rule 20 to designate perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) collectively identified as per- and polyfluoroalkyl substances (PFAS) as hazardous substances under section 102(a) of CERCLA. This designation allows EPA to use its CERCLA enforcement authorities, as appropriate and where relevant statutory elements are met, which could shift the cost burden of CERCLA response costs from the Superfund to Potentially Responsible Parties (PRPs). As such, PFAS, is now considered part of the ASTM standard scope and is included in this scope of work.

This project was performed in general accordance with ASTM E1527-21 and AECOM's proposal to the client, dated October 30, 2024. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and the field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in ASTM E1527-21, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a subject property, and this practice recognizes reasonable limits of time and cost. (Section 4.5.1 of ASTM E1527-21)
- Not Exhaustive - "All appropriate inquiries" does not mean an exhaustive assessment of a property. There is a point at which the cost of information or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-21)
- Comparison with Subsequent Inquiry – It should not be concluded or assumed that an investigation was not AAI merely because the inquiry did not identify RECs in connection with a subject property. ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-21)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-21 is employed. According to ASTM E2600-22, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. Screening is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with the property. (Section 4.5.1 of ASTM E2600-22)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-22)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-22)

This report was prepared pursuant to an agreement between South Florida Water Management District (SFWMD) (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Report Viability

According to ASTM E1527-21, an ESA "meeting or exceeding this practice is presumed to be viable when it is conducted within 180 days of acquisition of the subject property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The dates of the components presented in 4.6.2(i), (iii), (iv), and (v) for interviews, review of government records, visual inspections, and declaration by environmental professional, shall be identified in the report. Completion of searches for recorded environmental cleanup liens (4.6.2(ii)) is a user responsibility; however, if the user has engaged the environmental professional to conduct these searches, then that date shall also be identified in the report." The table below lists the dates of completion for pertinent components of this Phase I ESA.

Component	Date of Issuance/Completion
Interviews with Owners, Operators and Occupants	January 10, 2025
Environmental Database Report	November 1, 2024
Visual Inspection of the Subject Property and Adjoining Properties	January 10, 2025/January 22, 2025
Declaration by Environmental Professional	August 20, 2025
Issuance of Report	August 20, 2025

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Report Viability Expiration Date*	April 30, 2025

* The 180-day viability date is based on the earliest referenced component noted in the table above.

1.5 Data Gaps

Per ASTM E1527-21:

- A data gap is defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.
- A data gap is considered a significant data gap if other information and/or professional experience raises reasonable concerns involving the effects of that data gap on the ability of the environmental professional to render an opinion regarding whether conditions exist that are indicative of RECs or CRECs.

The following data gaps (to include site-specific limitations) were encountered during the course of this assessment:

- During the site visit, AECOM did not access the roof of the control building. AECOM's evaluation of the subject property focused on areas where hazardous substances are handled. The site contact did not report any hazardous substances associated with the roof or within the building. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- Approximately 58% of the subject property is covered by water; therefore, not all areas were able to be observed/assessed. Based on the use of this portion of the subject property and a review of historical documents, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this Phase I ESA. The user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property. Based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.
- A data failure was encountered in determining the historical use of the subject property. The earliest source of historical information reasonably ascertainable within the time frame of this report in which usage could be determined was an aerial photograph from 1940. At the time of the photograph, Dixie Highway and the Florida East Coast (FEC) Railway are depicted on the subject property (a developed use per ASTM E1527-21). Therefore, the ASTM E1527-21 requirement to determine all obvious uses of the property from the present back to the property's first obvious developed use, or back to 1940, whichever is earlier, could not be achieved. However, based upon the identified land use, it is unlikely that there had been significant prior development; therefore, this data failure is not expected to be significant so that it would impact the results of this assessment.
- It should be noted that not all standard historical sources, as defined per ASTM E1527-21, were reviewed as part of this assessment. In addition to recorded land title records, building department records were not reviewed. Based on information provided from the remaining standard historical sources, additional historical information obtained from building department records would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to be significant so that it would impact the results of this assessment.
- Per ASTM E1527-21, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

- Per the agreed scope-of-work and ASTM E1527-21, information related to certain site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-21; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant data gap to this investigation, given the historical use of the subject property.
- AECOM submitted a Public Records Request (PRR) to the Pompano Beach Fire Rescue on January 9, 2025, and to the Florida Department of Environmental Protection (FDEP) on February 4, 2025, to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's PRR has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the Pompano Beach Fire Rescue or FDEP to our PRR will significantly alter the conclusions or recommendations of this report. However, if information is received from this PRR that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

2. Site Description

2.1 Site Location and Parcel Description

The subject property consists of approximately 7.9-acres of land, with approximately 4.6-acres of the site covered by a canal and is made up of portions of five (5) separate parcels identified by Broward County PIN's 4942-11-00-0480, 4942-11-00-0490, 4942-11-00-0500, 4942-11-00-0520, and 4942-11-00-0530. The subject property is located in Pompano Beach, Broward County, Florida. The subject property is an irregularly shaped rectangular tract of land and canal that includes a gated spillway structure, S37A, situated within the Cypress Creek Canal, approximately 715 feet north of East Cypress Creek Road. The subject property is accessed from Dixie Highway, which runs through the center of the subject property. The approximate location of the subject property is illustrated on Figure 1 - Site Location Map.

2.2 Site Ownership

According to the Broward County Property Appraiser's records, the subject property is owned by SFWMD.

2.3 Site Visit

Ms. Kelsey Esteves and Mr. Matthew Schlak with AECOM visited the subject property on January 10, 2025, and Ms. Esteves visited the subject property again on January 22, 2025. The site visit conducted on January 10, 2025, included a visual inspection of the exterior portions of the subject property and the surrounding area. During the initial site visit, the AECOM team was unaccompanied. During this visit, the onsite structure was inaccessible. As a result, a follow up visit was conducted to observe the interior of the site building on January 22, 2025. During this visit, Ms. Esteves was accompanied by Mr. Josh Feltner, Leasing & Real Estate Support – Environmental Science Unit, of the SFWMD to subject building. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.5.

The site visit methodology consisted of walking over accessible areas of the subject property, including the building interior and exterior, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visits.

2.3.1 Site and Facility Description

The approximate 7.9-acre subject property encompasses an estimated 4.6 acres of the Cypress Creek Canal, a gated spillway structure, S37A, and a single-story control building that houses electrical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically, or telemetry controlled. The eastern and western portions of the subject property are occupied by the Cypress Creek Canal.

The onsite structure is a reinforced concrete, gated spillway, with discharge controlled by cable operated, vertical lift gates. The operation of the gates is automatically controlled so that gate operating system opens or closes the gates in accordance with seasonal operational criteria.

During the site visit, one (1) underground storage tank (UST) of an unknown capacity containing propane was observed. No visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields were identified on the subject property. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. In addition, no visual evidence of significant corrosion was identified on the floors or walls of the spillway structure or control building of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

2.3.2 Surrounding Properties

The subject property is located in a mixed-use area of residential and commercial properties within the city of Pompano Beach. South Dixie Highway and the Florida East Coast (FEC) Railway bisect the central portion of the subject property. The subject property is bordered to the northwest by residential single-family homes and various commercial businesses, such as Patrice Income Tax Service, Marine Canvas America, Jackie Lee Beauty Studio and self-storage spaces, and bordered to the northeast by KD Construction and residential single-family homes. The subject property is bordered to the east by the Cypress Creek Canal followed by residential properties. The subject property is bordered to the southwest by residential single-family homes and to the southeast by Pine Crest School. The subject property is bordered to the west by the Cypress Creek Canal and residential single-family homes. Gasoline service stations and dry cleaners were not observed in the immediate vicinity (approximately 500 feet) of the subject property. Other off-site sources of concern were not identified in the immediate vicinity.

AECOM did not identify any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. With the exception of the Cypress Creek Canal, which covers more than half of the subject property, no sensitive receptors (i.e., day care centers, schools, hospitals) were identified as being located adjacent to the subject property. Based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of concern were identified.

2.3.3 Petroleum Products and Hazardous Materials

No petroleum products or hazardous materials use, or storage was observed at the subject property. Staining or visual evidence of a hazardous materials release was not observed at the time of the site visit.

2.3.4 Hazardous Waste

No evidence of hazardous waste generation was observed at the subject property, and the site contact reported no such activities. In addition, the subject property was not listed as a generator of hazardous waste in the site-specific database report.

2.3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the use of the site, PCBs are not expected to be present on-site. No pad or pole-mounted transformers were observed on the subject property during the site visit. No other hydraulic equipment (transformers, trash compactors, lifts) was identified on the subject property.

2.3.6 Aboveground Storage Tanks

Aboveground storage tanks (ASTs) were not observed on the subject property during the site visit. In addition, no ASTs were listed in the site-specific environmental database report reviewed by AECOM, or otherwise identified during AECOM's review of historical aerial photographs.

2.3.7 Underground Storage Tanks

One (1) UST of an unknown capacity containing propane gas used only in emergency situations to power the spillway gates was observed next to the onsite structure on the southeastern portion of the subject property. Due to the nature of propane (gas at normal temperature and pressure), this propane storage is not considered a significant concern.

2.3.8 Solid Waste

Based on the lack of activities on-site, no solid waste is expected to be generated at the subject property. However, miscellaneous trash such as glass bottles and cardboard were observed on the southeastern portion of the subject property. No evidence of oil or hazardous materials were observed in the vicinity of these discarded items and no evidence of a release was identified; therefore, the trash observed is not considered a REC.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

2.3.9 Water

Municipal water is not currently provided to the subject property. No potable water wells were observed at the subject property or reported by the site contact to be present on-site.

2.3.10 Wastewater

Due to the absence of activities on-site, no wastewater is currently generated on the subject property.

2.3.11 Stormwater

Stormwater from the subject property appears to drain via sheet flow to the stormwater drains located throughout the subject property. The subject property is connected to the municipal stormwater sewer system. No staining was observed in the vicinity of the storm drains.

2.3.12 Heating and Cooling

The on-site spillway structure and control building are not equipped with heating or cooling services.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

3. Environmental Setting

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of the Fort Lauderdale North and Pompano Beach, Florida quadrangles and a review of the Google Earth application indicate that the subject property elevation ranges from approximately 0 to 3 feet above mean sea level (amsl). Approximately 4.6 acres of the 7.9-acre subject property consist of the Cypress Creek Canal. However, the remaining subject property is developed and surface water runoff from the subject property is likely diverted to man-made drainage systems.

3.2 Soil/Geology

Site-specific geologic information was not identified during the course of this assessment; however, according to state and regional geologic sources, the subject property lies within the Gold Coast – Florida Bay Physiographic District. This is the area of south and southeastward sluggish drainage from Lake Okeechobee. The rocks and sediment are Pleistocene aged and are largely limestones or limestone cap rocks. The site lies within the sub classification of the Southern Atlantic Coastal Strip Subdistrict. The subdistrict consists of a broad ridge underlain by sand and shelly sand that probably originated as a shoal. Very gentle slopes exist on the westward side. The eastern side is more complex having been subsequently modified by marine processes. Within the Southern Atlantic Coastal Strip are six (6) geologically distinct sections. The subject site lies within the Pompano-Fort Lauderdale Gap. This is an area with no detectable coastal ridge; the elevations are generally 10-12 feet amsl (UF, 1981).

Surface soils at the subject property are mapped as the Urban Land, Basinger fine sand and Arents, organic substratum-Urban land complex. Urban Land soils consist of areas that are more than 70 percent covered by airports, shopping centers, parking lots, large buildings, streets and sidewalks, and other structures, so that the natural soil is not readily observable. Unoccupied areas of this land type, mostly lawns, parks, vacant lots and playgrounds, consist of soils in the Hallandale, Margate, Immokalee, and Basinger series that have been altered by fill material spread on the surface to an average thickness of about 12 inches. These unoccupied areas are in tracts too small to be mapped separately. The fill is mostly sandy material, some of which contains limestone and shell fragments. Basinger fine sand is a nearly level, deep, poorly drained, sandy soil in broad sloughs and flats. Included in mapping are small areas of Immokalee fine sand, Pompano fine sand, and Margate fine sand. Most of the acreage of this soil is in natural vegetation that consists of pepper trees, myrtle, pine, and native grasses. Scattered cypress trees are in lower areas. The Arents, organic substratum-Urban land complex consists of approximately 50 to 70 percent Arents, and about 30 to 50 percent of Urban land. The areas of these components are so intermixed or so small that to map them separately at the scale used was impractical. Slopes are 0 to 5 percent. The Arents, organic substratum, are found in open areas that are used for lawns, vacant lots, parks, and playgrounds or are unused. Urban land consists of streets, sidewalks, parking lots, buildings, and other construction areas where the soil is covered and cannot be readily observed. Arents are nearly level or gently sloping, somewhat poorly drained to moderately well drained, heterogeneous sandy materials about 20 to 50 inches thick that have been spread over the natural soils to make them suitable for urban development. The underlying natural soil can generally be identified in places where the overburden material is less than about 30 inches thick. (USDA, 1984).

3.3 Groundwater/Hydrology

Site-specific hydrologic information was not identified during the course of this assessment. Based on topography and geologic conditions, uppermost groundwater likely occurs within 3 to 4 feet of the ground surface at the subject property (USGS, 1995). Uppermost groundwater flow direction likely follows local topography generally southeast and towards the Cypress Creek Canal. It should be noted that the actual depth and flow direction of

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

groundwater beneath the subject property cannot be determined without site-specific groundwater monitoring well data.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1940, 1947, 1952, 1958, 1961, 1968, 1973, 1976, 1981, 1988, 1992, 1995, 1999, 2007, 2010, 2015, and 2019;
- Google Earth aerial images dated 1995, 1999, 2002 through 2008, 2010 through 2012, and 2014 through 2024;
- Topographic maps dated 1945, 1949, 1962, 1969, 1973, 1983, 1995, 2012, 2015, 2018, and 2021;
- City directories for the years 1958, 1962, 1970, 1979, 1980, 1990, 1992, 1995, 1999, 2000, 2005, 2010, 2014, 2017, and 2020;

Building Department records were not reviewed during the course of this assessment. According to Environmental Data Resources, Inc. (EDR), Sanborn® Fire Insurance Map coverage is not available for the subject property. Copies of the historical documents/reports are provided in Appendix B.

4.1 Subject Property

Historical research indicates that the subject property was developed with the FEC Railway and Dixie Highway from at least 1940. The Cypress Creek Canal is also depicted with dense vegetation encroaching the narrow canal system during this time. By at least 1957, the dense vegetation surrounding the northwestern portion of the Cypress Creek Canal has been removed. By at least 1958, significant canal improvements, such as canal widening and slope enhancements on the south side of the canal, are depicted. Additionally, road improvements to Dixie Highway are depicted. By at least 1961, the remaining vegetation on the north side of the canal is no longer depicted. During this time, the spillway structure, S37A, situated within the canal and the control building, on the eastern portion of the subject property, are depicted. By at least 1992, additional road improvements to Dixie Highway are depicted. By at least 2007, road base material is depicted in the area surrounding the control building. The subject property has remained in its current configuration (as observed during AECOM's site visit) since at least 2007. No RECs were identified based on the historical review.

4.2 Adjoining Properties and Surrounding Area

The 1940 historical aerial depicts the adjoining properties and surrounding area as mostly undeveloped vegetated land with the exception of the FEC Railway and Dixie Highway. The railroad and highway bisect the subject property from north to south. By at least 1947, land clearing is depicted on a portion of the northwestern adjoining property. By at least 1958, clearing and grubbing on the southern adjoining properties, in preparation for future development, is depicted. From at least 1958 to at least 1961, canal improvements, such as canal widening, clearing vegetation, and slope stabilization are depicted extending from the subject property to all adjoining properties. By at least 1961, the southwestern adjoining property is developed with the present-day residential single-family homes. Additionally, land clearing and development is depicted on the northern adjoining properties and residential single-family home development is depicted to the northeast of the subject property. By at least 1968, the commercial buildings on the central northeastern adjoining property and residential single-family homes on the northeastern adjoining property are depicted. By at least 1973, additional residential single-family homes are depicted on the northwestern adjoining property. Significant development is also pictured in the surrounding areas. By at least 1981, the central northwestern adjoining property is developed with the present-day commercial flex plaza. By at least 1999, a baseball field and a football field associated with the Pine Crest School are depicted on the southeastern adjoining property. By at least 2004, upgrades to the southeastern adjoining sports complex are depicted, such as a long rectangular structure. By at least 2010, additional upgrades are depicted, for example, the football field has been painted and grass has been removed from the baseball infield and replaced with dirt. The surrounding areas are depicted in the general configuration observed during AECOM's site reconnaissance since at least 2010. No historical off-site sources of concern were identified.

4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were not identified during this assessment, and none were they provided by the Client for review.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5. Database and Records Review

5.1 User Provided Information

Section 6 of ASTM E1527-21 states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-21; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Land Title and Judicial Records for Environmental Liens and Activity and Use Limitations

Information pertaining to chain-of-title, environmental liens or activity and use limitation was not provided to AECOM by the User (i.e., the client), nor was AECOM contracted to obtain information pertaining to chain-of-title, environmental liens or activity and use limitations. Environmental agency databases as provided by EDR show no indication of deed restrictions or activity and use limitations due to a release of hazardous materials.

5.3 Database Information

In accordance with the scope of work and ASTM E1527-21, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report. It should be noted that this information is reported as AECOM received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either AECOM or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. Five (5) additional sites were identified within the database report; however, EDR was not able to map them to specific locations due to insufficient/contradicting address information. These sites were included in the database report as "orphan" sites. Based upon AECOM's review, there does not appear to be significant concerns associated with any of the orphan sites. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix C.

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

5.3.1 Subject Property

The subject property was not identified in the site-specific environmental database report.

5.3.2 Surrounding Sites

According to the environmental database report, numerous sites (over 20) were identified within their respective ASTM E1527-21 and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

from the subject property, regulatory status (i.e., closed, no violations found), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Due to its proximity to the subject property, the following site is discussed in additional detail:

- K.D. Construction, 1831 Southwest 7th Avenue, Facility ID: 03894, is located adjacent north of the subject property. This site is listed on Broward County's Hazardous Materials (HM) database. According to a Broward County HM Management Facility license dated March 21, 2023, this facility maintains a hazardous materials license for used oil, spent lead acid batteries and aerosol cans. The most recent inspection completed by Broward County listed the status of this facility as "in compliance". Based on the lack of documented contamination and its current regulatory status, this listing is not considered a REC to the subject property, in AECOM's opinion.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 VES as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-22. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

5.4.1 Subject Property

No on-site sources of vapor encroachment (e.g., UST, contaminated soil, groundwater plume, etc.) were identified during this assessment. Based on this information, a VEC due to an on-site source does not appear to exist.

5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that 2 CVOC/SVOC and no petroleum hydrocarbon impacted sites are located with the above-described radii of the subject property. However, the 2 sites can be ruled out due to their regulatory status (i.e., regulatory closure has been issued), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Based on this information, it is AECOM's opinion that a VEC at the subject property due to an off-site source does not appear to exist.

5.4.3 Local

AECOM submitted a Public Records Request (PRR) to the Pompano Beach Fire Rescue on January 9, 2025, to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's PRR has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the Pompano Beach Fire Rescue to our PRR will significantly alter the conclusions or recommendations of this report. However, if information is received from this PRR that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5.4.4 County

AECOM reviewed the Broward County Property Appraiser's online database for records pertaining to the subject property's physical and parcel addresses. No records were identified for the subject property physical and parcel addresses.

5.4.5 State

AECOM submitted a Public Records Request to the FDEP for information pertaining to the generation, transportation, storage, treatment and/or disposal of hazardous waste as well as any historical petroleum or chemical releases, leaking petroleum tanks, environmental assessment activities, and/or notices of violation that may have occurred on the subject property. No information was received during the time frame of this assessment.

5.4.6 Federal

AECOM searched the United States Environmental Protection Agency's (US EPA's) Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potentially hazardous waste sites. The subject property was not listed on the Envirofacts or SEMS databases.

6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM E1527-21, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings of this Phase I ESA and the opinions of the environmental professional.

6.1 Recognized Environmental Conditions

Based on the above-described activities, no RECs were identified in connection with the subject property.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the subject property.

6.4 Vapor Encroachment Conditions

Based on the above-described activities, no VECs were identified in connection with the subject property.

6.5 De Minimis Conditions

Based on the above-described activities, no DMCs were identified in connection with the subject property.

6.6 Significant Data Gaps

ASTM E1527-21 requires the environmental professional document significant data gaps, as well as any exceptions to, or deletions from the ASTM Practice E1527-21. A significant data gap is a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Based on the above-described activities, no significant data gaps were identified during this Phase I ESA.

7. Conclusions

AECOM has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the S37A Gated Spillway Facility identified by Broward County PINs 4942-11-00-0480 (portion), 4942-11-00-0490 (portion), 4942-11-00-0500 (portion), 4942-11-00-0520 (portion), & 4942-11-00-0530 (portion), Pompano Beach, Broward County, Florida, the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.

8. Environmental Professional Statement

Mr. Madabhushi was the Environmental Professional (EP) for this project. Mr. Madabhushi's EP statement is below and his resume is provided in Appendix D:

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Historical Topo Map Report

11/01/24

Site Name:	Client Name:
SFWMD - S37A Spillway	AECOM
Fort Lauderdale	7650 Corporate Center Drive
Fort Lauderdale, FL 33334	Miami, FL 33126
EDR Inquiry # 7810897.4	Contact: Kelsey Esteves

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

EDR Inquiry # 7810897.3	Contact: Kelsey Esteves

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

STRUCTURE 37A

This structure is a reinforced concrete, gated spillway with discharge controlled by two stem operated, vertical lift gates. Operation of the gates is automatically controlled so that the gate operating system opens or closes the gates in accordance with the operational criteria. The structure is located on Canal 14, 150 feet east of Dixie Highway and just east of the F.E.C. Railroad.

PURPOSE

This structure maintains optimum upstream water control stages in Canal 14; it passes the design flood (40% and 60% of the Standard Project Flood from the western and eastern portions of the drainage basin, respectively) without exceeding the upstream flood design stage, and restricts downstream flood stages and channel velocities to non-damaging levels; and it prevents saline intrusion.

OPERATING CRITERIA

This structure is operated to maintain an optimum water surface of 3.5 feet insofar as possible. The automatic operation is actuated by the headwater elevation as follows:

When the headwater elevation rises to 4.4 feet, the gates begin to open at six inches per minute.

When the headwater elevation rises or falls to elevation 4.0, the gates become stationary.

When the headwater elevation falls to 3.0, the gates begin to close.

FLOOD DISCHARGE CHARACTERISTICS

	Design	Standard Project Flood
Discharge Rate	3890 cfs	3890 cfs
	40 & 60 % SPF	100 % SPF
Headwater Elevation	3.0 feet	5.4 feet
Tailwater Elevation	-0.4 feet	-0.4 feet
	2.0	2.0
Type Discharge	submerged controlled	submerged controlled free

Revised 9/19/94

DESCRIPTION OF STRUCTURE

Type reinforced concrete gated spillway

Weir Crest

Net Length 50.0 feet

Elevation -7.7 feet

Service Bridge Elevation 8.0 feet

Water level which will by-pass structure 8.0 feet

Gates

Number 2

Size 12.8 ft. high by 25.8 ft. wide

Type vertical lift

Bottom of gates full open 4.0

Top of gates closed 5.0

Control On-site, automatic headwater control with differential water level override sensed by bubbler system and remote computer control

Date of Transfer: August 9, 1961

ACCESS: Structure located just east of Old Dixie Highway

HYDRAULIC AND HYDROLOGIC MEASUREMENTS

Water Level Remote digital headwater & tailwater recorders

Gate Position Recorder Remote digital recorder

Rain Gauge: Remote, digital recorder

DEWATERING FACILITIES

Storage Needles at Miami Field Station, beams at West Palm Beach Field Station

Type Needle beams and vertical aluminum needles

Size and Number (per bay) _____

Upstream and downstream

Number 1 beam; needles, 5 @ 4', 1 @ 2' wide

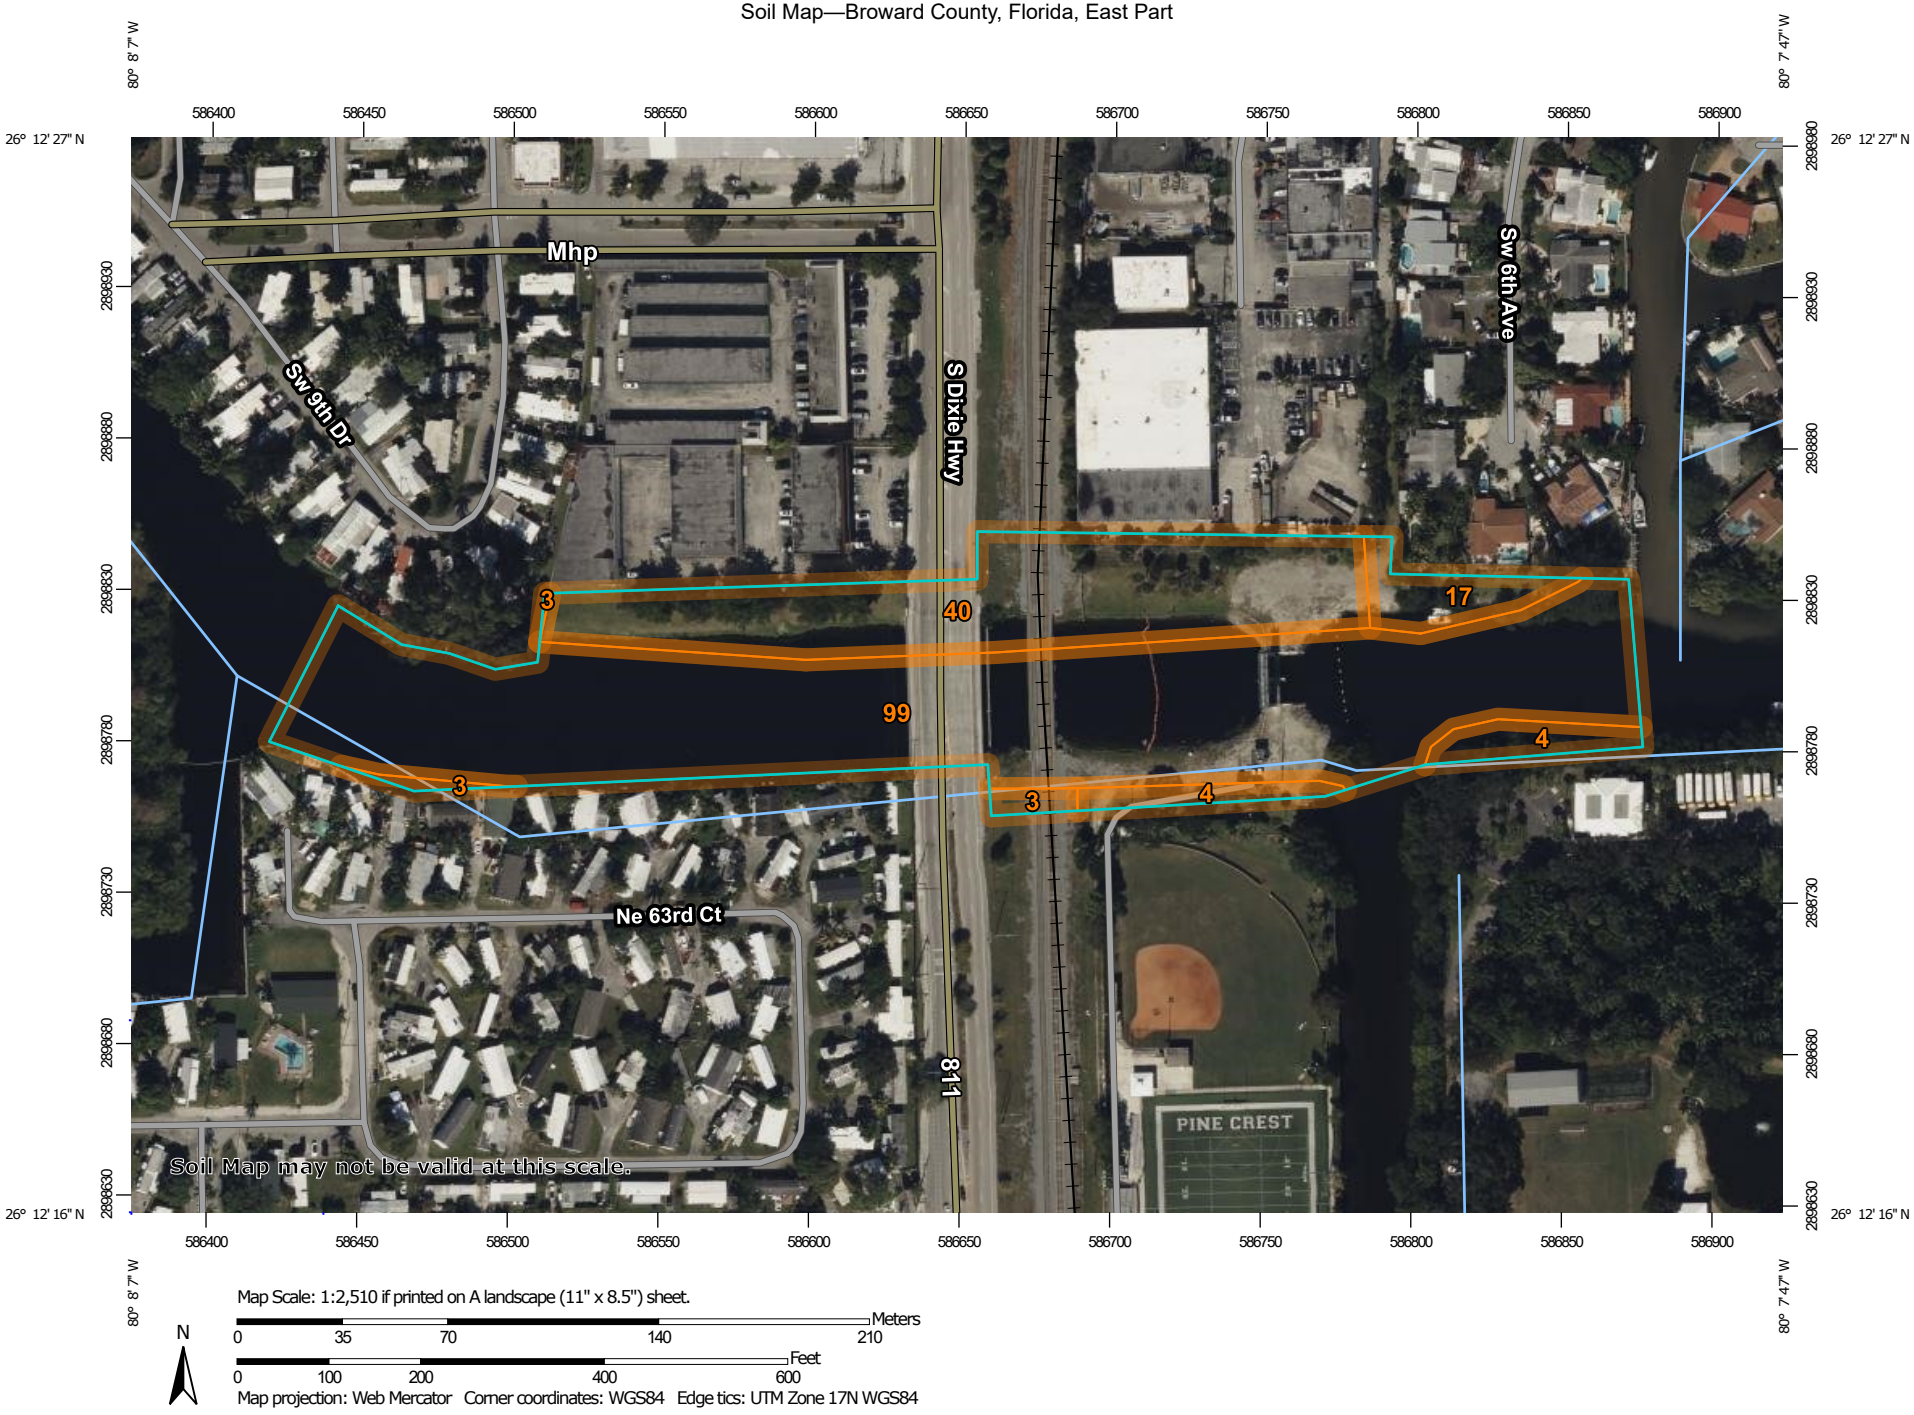
Size beam 33WF200 with 24" flange end sections, length 26' -11"
needles 20' long

Lifting Mechanism

Normal power source Commercial electricity - main gates

Emergency power source LP gas engine driven generator

Type Hoist Main gates - direct drive electric motor, gear
connected to gear box and gate stems.



Map Scale: 1:2,510 if printed on A landscape (11" x 8.5") sheet.

N

Meters: 0 35 70 140 210

Feet: 0 100 200 400 600

Map projection: Web Mercator Corner coordinates: WGS84 Edge tics: UTM Zone 17N WGS84

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Broward County, Florida, East Part
Survey Area Data: Version 20, Aug 20, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 14, 2022—Jan 24, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
3	Arents, organic substratum-Urban land complex	0.1	1.2%
4	Basinger fine sand, 0 to 2 percent slopes	0.3	4.2%
17	Immokalee-Urban land complex	0.3	3.6%
40	Urban land, 0 to 2 percent slopes	1.9	26.1%
99	Water	4.8	64.9%
Totals for Area of Interest		**7.4**	**100.0%**

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal Delisted NPL sites

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 09/25/2024 has revealed that there

is 1 Delisted NPL site within approximately 1 mile of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 7 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state and tribal leaking storage tanks

LAST: The file for Leaking Aboveground Storage Tanks. Please remember STCM does not track the source of the discharge so the agency provides a list of facilities with an aboveground tank and an open discharge split by facilities with aboveground tanks only and facilities with aboveground and underground tanks.

A review of the LAST list, as provided by EDR, and dated 07/22/2024 has revealed that there is 1 LAST site within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 10 UST sites within approximately 0.25 miles of the target property.

Fl Sites: This summary status report is a compilation and revision of other existing lists. It was developed from a number of lists including the Eckhardt list, the Moffit list, the EPA Hazardous Waste Sites list, EPA's Emergency and Remedial Response Information System list (RCRA Section 3012), and existing department lists such as the Obsolete Uncontrolled Hazardous Waste Sites list. The purpose of this list is to track the progress of activities within and outside the department as they relate to the listed sites. It is not a list of uncontrolled sites or sources causing environmental contamination. The Sites List comes from the Department of Environmental Protection.

A review of the Fl Sites list, as provided by EDR, and dated 12/31/1989 has revealed that there are 6 Fl Sites sites within approximately 1 mile of the target property.

HAZ WASTE: The records in this data set are generated by county SQG Assessment, Notification and Verification Programs on-site surveys (see 403.7225 FS). The waste records are wastes observed during county inspections. Even though this state program targets SQGs and VSQGs for outreach, some counties choose to additionally look at their LQGs.

A review of the HAZ WASTE list, as provided by EDR, and dated 08/13/2024 has revealed that there are 13 HAZ WASTE sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

RD INDUSTRIES (Continued) **1004685135**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	F001

COASTLINE AUTO BODY (Continued) **1004683786**

Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
