Environmental Interest/Information System:
The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

SHWS: Florida's State-Funded Action Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

Lists of state and tribal brownfield sites

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

ERIC WASTE CLEANUP: Environmental Restoration Integrated Cleanup Listing
ERIC (Environmental Restoration Integrated Cleanup) is a single database for tracking all of the contaminated site cleanup activities in the Division of Waste Management (DWM). It was developed to bring together 11 different data systems to a single location that would allow tracking of a contaminated site throughout the course of cleanup regardless of which program area took the lead.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

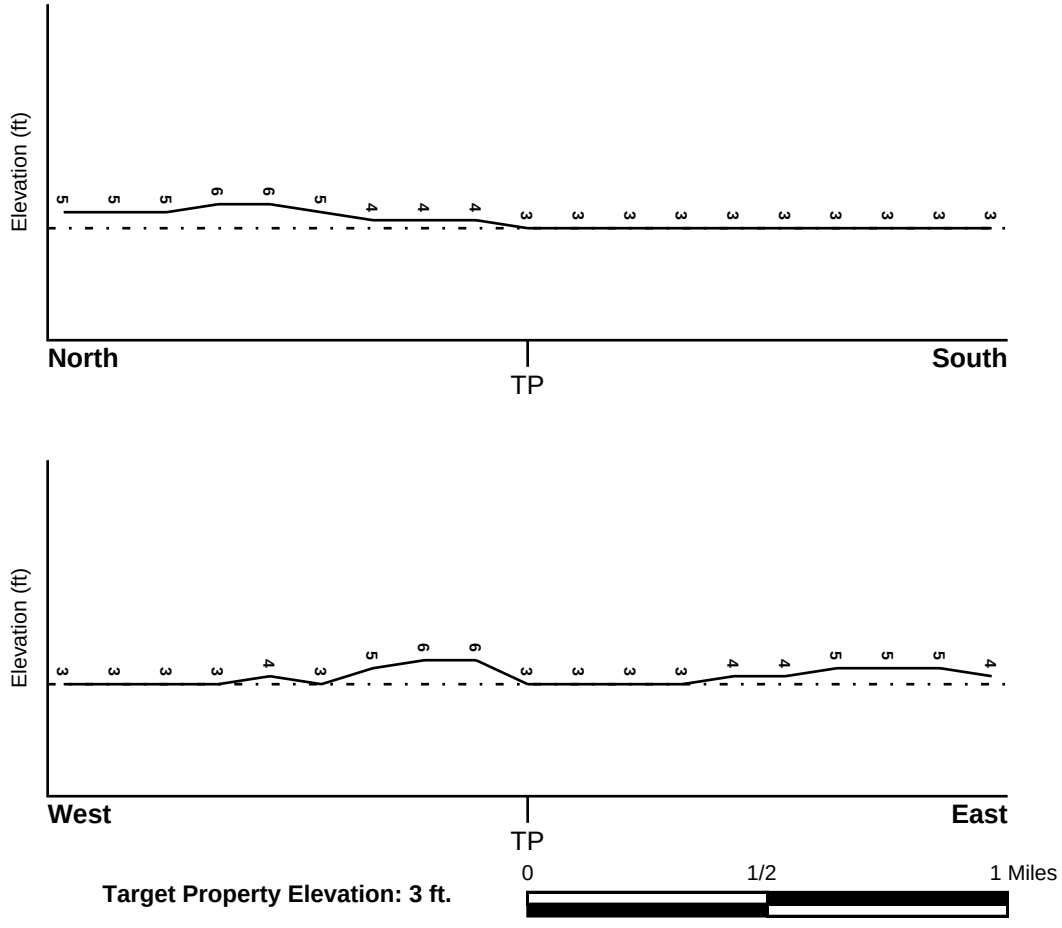
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
12011C0359H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
12011C0376H	FEMA FIRM Flood data
12011C0357H	FEMA FIRM Flood data
12011C0378H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FORT LAUDERDALE NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
14	1/2 - 1 Mile NE	NE
1G	1/2 - 1 Mile NE	NE

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
2	5 inches	35 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
3	35 inches	53 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6
4	53 inches	72 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6 Min: 3.6

Soil Map ID: 4

Soil Component Name: Basinger

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	1 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
2	1 inches	18 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
3	18 inches	35 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
4	35 inches	59 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6

Soil Map ID: 5

Soil Component Name: Arents, organic substratum

Soil Surface Texture: cobbly sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 76 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	cobbly sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 5.1

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	11 inches	38 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 5.1
3	38 inches	51 inches	muck	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 5.1
4	51 inches	72 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 5.1

Soil Map ID: 6

Soil Component Name: Sanibel

Soil Surface Texture: muck

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Very poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	muck	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
2	9 inches	9 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6
3	9 inches	59 inches	fine sand	Not reported	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 3.6

Soil Map ID: 7

Soil Component Name: Arents

Soil Surface Texture: cobbly sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	cobbly sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6.5 Min: 5.6
2	9 inches	31 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6.5 Min: 5.6
3	31 inches	59 inches	sand	Not reported	Not reported	Max: 141 Min: 42	Max: 6.5 Min: 5.6

Soil Map ID: 8

Soil Component Name: Immokalee

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Babu Madabhushi, PhD

Years of experience
31 total | 25 with AECOM

Babu has 31 years of experience in conducting and managing environmental engineering projects. His technical expertise is in the areas of conducting contamination assessment, evaluation, water/wastewater treatment, groundwater treatment, remedial system operation and maintenance.

Babu is extremely knowledgeable of FDOT District Four, Florida's Turnpike Enterprise, DERM, FDEP and local regulations and standards. His expertise also encompasses sediment characterization, dredge design, RCRA Facility Investigation, contamination assessment, impact assessment, remedial investigation and feasibility studies, soil and groundwater remediation, in-situ bioremediation, and operation and maintenance of remedial systems.

Professional experience

Contamination Assessment and Remediation Services - BEE68, FDOT District Four (2022 – Present). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Assessment and Remediation Services - BE678, FDOT District Four (2020 – 2022). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Evaluation and Screening -PD&E Studies, FDOT District Six, Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, Miami Gardens to County Line), St. Lucie (SR-80), Martin, and Monroe (US-1) Counties, FL (2003 – 2021). Developed CSER for more than 30 project locations and Re-Evaluation Reports for several FDOT projects in Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, I-95), St. Lucie (SR-80), Martin, and Monroe (US-1) counties.

SR-826/Palmetto Expressway from north of NW 25th St to North of NW 104th St CSER, FDOT District Six, Miami-Dade County, FL (2022 – 2024). Contamination lead for the FDOT PLEMO with environmental assessment support services for the SR-826/Palmetto Expressway CSER. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential.

SR-826/Palmetto Expressway from South of NW 25th St to North of NW 154th St SEIR, FDOT District Six, Miami-Dade County, FL (2020 – 2021). Contamination Lead to provide the FDOT PLEMO with environmental assessment support services for the SR 826 / Palmetto Expressway SEIR. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential**.**

I-95 from South of NW 10th St to North of Hillsboro Boulevard, FDOT District Four, Broward County, FL (2017 – 2021). Contamination Lead for environmental tasks associated with the performance of a PD&E Study. Tasks include Contamination Lead to provide the FDOT PLEMO with environmental assessment support services. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential**.**

Education

PhD, Hazardous Waste Management, West Virginia University, 1997
MS, Wastewater Treatment, Indian Institute of Technology, 1993
BS, Civil Engineering, Kakatiya University, 1988

Expertise

CAR Project Manager
Contamination Assessment
Remedial Design
Remedial Action Implementation
Water/Wastewater Treatment
Groundwater Treatment
Remedial System Operation and Maintenance
Sediment Characterization

Training

40-hr OSHA HAZWOPER
8-hr OSHA HAZWOPER Annual Refresher

Registrations/Certifications

AECOM Certified Project Manager
AECOM Lead Verifier: In Situ Bioremediation

SR-826/Palmetto Expressway from US-1 (SR-5) to SR-836 / Dolphin Expressway, FDOT District Six, Miami-Dade County, FL (2018 – Present). Contamination lead for environmental tasks associated with the performance of an approximate 7-mile PD&E Study**.** Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

I-75 from Miami-Dade County Line to SR-826 (Palmetto Expressway) PD&E Study, FDOT District Six, Miami-Dade County, FL (2007 – Present). Contamination lead for the performance of a PD&E Study. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

Wagner Creek/Seybold Canal Contaminated Sediment Dredging and Disposal (2017 – Present). Managed this critical project in a heavily commercialized area near Jackson Hospital. This included sediment dredge design, permitting, contaminated sediment characterization/handling, sediment stabilization, turbidity control and disposal at out of state landfill. Won multiple awards (from FDEP and other entities) for successfully completing this under budget and within schedule without harming the manatees.

Former Eaker Air Force Base Remediation, U.S. Air Force, Blytheville, AR (2011 – 2021). Project manager for this performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Eaker AFB. The sites are contaminated with petroleum compounds, light non-aqueous phase liquid, chlorinated solvents, and arsenic. Services include remedial investigation, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Miami Dade DERM-14/E20 Contracts, Miami-Dade Aviation Department, Miami International Airport, Opa Locka Airport, Public Housing, Northwest Cargo Area, Miami, FL (2002 – 2021). Managed several projects that included delineation of petroleum, chlorinated solvent, and metals contamination at these properties. Installed several deep nested wells to delineate contamination in various zones of the aquifer. Multiple wells were installed in the vicinity of the runways, in the public right of way, and in the vicinity of residential areas. Currently overseeing the long-term groundwater monitoring activities.

Former Homestead Air Force Base Remediation, US Air Force, Homestead, FL (2011 – 2021). Deputy project manager for a performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Homestead AFB. The sites are contaminated with petroleum compounds, chlorinated solvents, and arsenic. Services include remedial investigation, preparation of Explanation of Significant Differences (ESD) to Record of Decision (ROD) document, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, storage tank removal, remedial design modifications, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Contamination Evaluation Studies, FGT, Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe Counties, FL, (2006 – Present). Contamination Specialist, responsible for developing contamination evaluation reports and Contingency Plans for numerous project locations in Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe counties for projects associated with hydrotesting, pipeline maintenance/repairs and pipeline abandonment work.

Blue Lagoon Post Office Site Assessment, Remediation, and Methane Collection System, US Postal Service, Miami, FL (2003 – Present). Project Manager/Senior Environmental engineer for contamination assessment at a facility constructed over a filled-in canal where lead was found in the soil above state cleanup levels. Work included soil and groundwater remediation activities and methane gas collection system design and monitoring. Currently, AECOM is performing natural attenuation monitoring and methane gas monitoring.

Remediation Engineering, Federal Aviation Administration (FAA), William J. Hughes Technical Center, Atlantic City, NJ (2005 – 2012). Remediation engineering task leader for operation and maintenance of treatment systems for approximately 5,000-acre CERCLA Superfund site at Areas B, D, 20A, 29, and Area 41. Assisted with operation and maintenance of the existing Central Treatment Plant (Pump and Treat System) to treat petroleum contaminated water. Provided innovative remediation enhancements, such as in-situ aerobic bioremediation of petroleum compounds and reductive dechlorination of chlorinated solvents, contaminated soil removal, vapor extraction, groundwater and soil investigations, GIS mapping and support, groundwater modeling, and routine regulatory interaction.

Executive Summary

South Florida Water Management (SFWMD) authorized AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (Phase I ESA) for the S37B Gated Spillway Facility (subject property). The site is identified by Broward County Parcel Identification Numbers (PINs) 4942-04-00-0600 (portion) & 4942-04-00-0910 (portion) in Pompano Beach, Broward County, Florida (subject property). This Phase I ESA was performed in general conformance with the scope and limitations of ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21). Exceptions to, or deletions from, this practice are described in this report.

The site visit was conducted on June 11, 2025. The subject property consists of approximately 10.3 acres of land and canal that includes a gated spillway structure, S37B, situated within the Cypress Creek Canal and a single-story control building that houses electrical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically, or telemetry controlled. The structure is a reinforced concrete gated spillway, with discharge controlled by two (2) stem operated, vertical lift gates. During site reconnaissance, one (1) underground storage tank (UST), containing propane of an unknown capacity, was observed adjacent and north of the control building on the east central portion of the subject property. In addition, a rain gauge that automatically records precipitation was observed on the east side of the Cypress Creek Canal and north of the control building within a small, fenced area. No visual evidence of potable water wells, monitoring wells, clarifiers, dry wells, septic tanks, or leach fields was observed on the subject property during the site visit.

The subject property is located in a residential area within the city of Pompano Beach. The subject property is bordered to the north by the Cypress Creek Canal. The subject property is bordered to the east by residential communities. The subject property is bordered to the south by the Cypress Creek Canal and North Palm Air Drive. The subject property is bordered to the west by Oaks Drive followed by residential communities. Gasoline service stations and dry cleaners were not observed in the immediate vicinity (approximately 500 feet) of the subject property. Other off-site sources of concern were not identified in the immediate vicinity.

AECOM's review of historical information indicates that the southern half of the subject property was undeveloped and empty fields are depicted on the northern half of the subject property from at least 1947. By at least 1952, additional land on the southcentral portion of the subject property has been cleared. By at least 1961, the Cypress Creek Canal had been constructed throughout the center of the property as well as the S37B gated spillway structure. By at least 1973, several parked cars are depicted on the northeast corner of the subject property, east of the Cypress Creek Canal, likely associated with the golf course adjacent east of the subject property. An unimproved dirt trail, parallel and west of the Cypress Creek Canal is depicted. By at least 1981, North Palm Aire Drive, which crosses the Cypress Creek Canal on the south end of the subject property is depicted. By at least 1992, the previously depicted parked cars are no longer visible on the northeast corner of the subject property and the dirt trail on the western side of the subject property is a paved sidewalk. By at least 2002, a paved sidewalk is depicted east and parallel to the Cypress Creek Canal. The subject property has generally remained in its current configuration (as observed during AECOM's site visit) since at least 2002. No recognized environmental conditions (RECs) were identified based on the historical review.

The subject property was not identified on the environmental database search report obtained for this project.

A number of surrounding sites were identified in the environmental database search report. However, the majority of these sites were listed on non-contamination-related databases. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present a REC to the subject property, based on their distance (generally greater than 500 feet), regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the subject property (i.e., down-gradient or cross-gradient).

Based on the above-described activities, no RECs, controlled RECs (CRECs), historical RECs (HRECs), significant data gaps, or de minimis conditions (DMCs) were identified in connection with the subject property.

A Tier 1 vapor encroachment screening (VES) following ASTM International, Designation: E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* dated May 2022 (ASTM E2600-22) was completed and no vapor encroachment conditions (VECs) were identified.

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (Phase I ESA) was performed pursuant to AECOM Technical Services, Inc. (AECOM's) proposal, dated October 30, 2024, and Contract No. 4600004507-Work Order No. 14, for the S37B Gated Spillway Facility. The site is identified by Broward County Parcel Identification Numbers (PINs) 4942-04-00-0600 (portion) & 4942-04-00-0910 (portion) in Pompano Beach, Broward County, Florida (herein referred to as the "subject property"). This assessment was performed in advance of the potential spillway improvements at the subject property.

The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property. Per ASTM International, Designation: E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-21), potential findings can include RECs, historical RECs (HRECs), controlled RECs (CRECs), de minimis conditions (DMCs) and significant data gaps as follows:

- A REC is defined by the ASTM standard as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.
- A HREC is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority and meeting unrestricted use criteria established by a regulatory authority or authorities without subjecting the subject property to any required controls.
- A CREC is defined as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (activity and use limitations or other property use limitations).
- DMCs are conditions related to a release that generally do not present a threat to human health or the environment and generally would not be subject to enforcement action if brought to the attention of the appropriate governmental agencies.
- A significant data gap is a data gap that affects the ability of the environmental professional to identify a REC.

In addition, a Tier 1 vapor encroachment screening (VES) was completed as part of this assessment. This screening was conducted in general accordance with ASTM International, Designation: E2600-22, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions dated May 2022 (ASTM E2600-22). The objective of the VES was to evaluate if a vapor encroachment condition (VEC) exists or if a VEC does not exist.

This Phase I ESA is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

1.2 Scope of Work

The Phase I ESA included a site visit, interviews, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with personnel knowledgeable about the subject property. Non-Scope Services per ASTM E1527-21 including, but not limited to, asbestos, lead paint, radon, floodplains and wetlands were not included in the scope of work. On April 17, 2024, EPA signed the final rule 20 to designate perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) collectively identified as per- and polyfluoroalkyl substances (PFAS) as hazardous substances under section 102(a) of CERCLA. This designation allows EPA to use its CERCLA enforcement authorities, as appropriate and where relevant statutory elements are met, which could shift the cost burden of CERCLA response costs from the Superfund to Potentially Responsible Parties (PRPs). As such, PFAS, is now considered part of the ASTM standard scope and is included in this scope of work.

This project was performed in general accordance with ASTM E1527-21 and AECOM's proposal authorized on October 30, 2024. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in ASTM E1527-21, it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a subject property, and this practice recognizes reasonable limits of time and cost. (Section 4.5.1 of ASTM E1527-21)
- Not Exhaustive - "All appropriate inquiries" does not mean an exhaustive assessment of a property. There is a point at which the cost of information or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E1527-21)
- Comparison with Subsequent Inquiry – It should not be concluded or assumed that an investigation was not AAI merely because the inquiry did not identify RECs in connection with a subject property. ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of ASTM E1527-21)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when ASTM E1527-21 is employed. According to ASTM E2600-22, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No VES can wholly eliminate uncertainty regarding the identifications of VECs in connection with the target property. Screening is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with the property. (Section 4.5.1 of ASTM E2600-22)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of ASTM E2600-22)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4 of ASTM E2600-22)

This report was prepared pursuant to an agreement between South Florida Water Management District (SFWMD) (Client) and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Report Viability

According to ASTM E1527-21, an ESA “meeting or exceeding this practice is presumed to be viable when it is conducted within 180 days of acquisition of the subject property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The dates of the components presented in 4.6.2(i), (iii), (iv), and (v) for interviews, review of government records, visual inspections, and declaration by environmental professional, shall be identified in the report. Completion of searches for recorded environmental cleanup liens (4.6.2(ii)) is a user responsibility; however, if the user has engaged the environmental professional to conduct these searches, then that date shall also be identified in the report.” The table below lists the dates of completion for pertinent components of this Phase I ESA.

Component	Date of Issuance/Completion
Interviews with Owners, Operators and Occupants	June 11, 2025
Environmental Database Report	June 3, 2025
Visual Inspection of the Subject Property and Adjoining Properties	June 11, 2025
Declaration by Environmental Professional	August 18, 2025
Issuance of Report	August 18, 2025

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

Report Viability Expiration Date*	November 30, 2025

* The 180-day viability date is based on the earliest referenced component noted in the table above.

1.5 Data Gaps

Per ASTM E1527-21:

- A data gap is defined as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.
- A data gap is considered a significant data gap if other information and/or professional experience raises reasonable concerns involving the effects of that data gap on the ability of the environmental professional to render an opinion regarding whether conditions exist that are indicative of RECs or CRECs.

The following data gaps (including site-specific limitations) were encountered during the course of this assessment:

- Approximately 33.8% of the subject property is covered by water; therefore, not all areas were able to be observed/assessed. Based on the use of this portion of the subject property and a review of historical documents, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- During the site visit, AECOM did not access the roof of the control building. AECOM's evaluation of the subject property focused on areas where hazardous substances are handled. The site contact did not report any hazardous substances associated with the roof. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this Phase I ESA. The user was not aware of environmental liens or activity use limitations (AULs) that have been placed on the subject property. Based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.
- It should be noted that not all standard historical sources, as defined per ASTM E1527-21, were reviewed as part of this assessment. In addition to recorded land title records, building department records were not reviewed. Based on information provided from the remaining standard historical sources, additional historical information obtained from building department records would not likely have assisted in meeting the historical use requirement; therefore, this data gap is not expected to be significant so that it would impact the results of this assessment.
- Per ASTM E1527-21, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to be significant so that it would impact the results of this assessment.
- Per the agreed scope-of-work and ASTM E1527-21, information related to certain site-specific items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from ASTM E1527-21; at this time, the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant data gap to this investigation, given the historical use of the subject property as a restaurant.
- AECOM submitted a Public Records Request (PRR) to the Pompano Beach Fire Rescue and Florida Department of Environmental Protection (FDEP) on June 3, 2025, to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

this report, a response to AECOM's PRR has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from Pompano Beach Fire Rescue or FDEP to our PRR will significantly alter the conclusions or recommendations of this report and is not considered a significant data gap; however, if information is received from this PRR request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

2. Site Description

2.1 Site Location and Parcel Description

The subject property consists of approximately 10.3-acres of land and canal and is identified by Broward County PINs 4942-04-00-0600 (portion) & 4942-04-00-0910 (portion). The subject property is located in Pompano Beach, Broward County, Florida. The subject property is a rectangular shaped tract of land and canal that includes a gated spillway structure, S37B, situated within the Cypress Creek Canal, located more than a ¼ mile south of Atlantic Boulevard. The subject property is accessed from North Palm Aire Drive along the southern property boundary. The approximate location of the subject property is illustrated on Figure 1 - Site Location Map.

2.2 Site Ownership

According to the Broward County Property Appraiser's records, the subject property is owned by SFWMD.

2.3 Site Visit

Ms. Kelsey Esteves with AECOM visited the subject property on June 11, 2025. The site visit included a visual inspection of the interior portions of the onsite building and structures, as well as the exterior portions of the subject property and the surrounding area. During the site visit, AECOM was accompanied by Mr. Josh Feltner, Leasing & Real Estate Support – Environmental Science Unit, of the SFWMD. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.5.

The site visit methodology consisted of walking over accessible areas of the subject property, including the building interiors and exteriors, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visit.

2.3.1 Site and Facility Description

The approximate 10.3-acre subject property encompasses an estimated 3.5 acres of the Cypress Creek Canal, a gated spillway structure, S37B, situated within the Cypress Creek Canal, and a single-story control building that houses electronical equipment used to operate the water control structure. The gated spillway structure is not manned, and the operations are automatically or telemetry controlled. The structure is a reinforced concrete gated spillway, with discharge controlled by two (2) stem operated, vertical lift gates.

During the site visit, one (1) underground storage tank (UST) containing propane of an unknown capacity was observed adjacent north of the control building on the east central portion of the subject property. In addition, a rain gauge that automatically records precipitation was observed on the east side of the Cypress Creek Canal and north of the control building within a small, fenced area. No visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was identified on the subject property. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. Also, no visual evidence of significant corrosion was identified on the floors or walls of the subject property building or on the exterior of the subject property. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

2.3.2 Surrounding Properties

The subject property is located in a residential area within the city of Pompano Beach. The subject property is bordered to the north by the Cypress Creek Canal. The subject property is bordered to the east by residential communities. The subject property is bordered to the south by the Cypress Creek Canal and North Palm Air Drive. The subject property is bordered to the west by Oaks Drive followed by residential communities.

AECOM did not identify any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. In addition, no sensitive receptors (i.e., day care centers, schools, hospitals) were identified as

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

being located adjacent to the subject property. Based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of environmental concern were identified.

2.3.3 Petroleum Products and Hazardous Materials

No petroleum products or hazardous materials use or storage was observed at the subject property. Staining or visual evidence of a hazardous materials release was not observed at the time of the site visit.

2.3.4 Hazardous Waste

No evidence of hazardous waste generation was observed at the subject property, and the site contact reported no such activities. In addition, the subject property was not listed as a generator of hazardous waste in the site-specific database report.

2.3.5 Polychlorinated Biphenyls

Polychlorinated biphenyl (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the use of the site, PCBs are not expected to be present on-site.

No pad or pole-mounted transformers were observed on the subject property during the site visit. No other hydraulic equipment (transformers, trash compactors, lifts) was identified on the subject property. The on-site loading docks are manually operated.

2.3.6 Aboveground Storage Tanks

Aboveground Storge Tanks (ASTs) were not observed on the subject property during the site visit. In addition, no ASTs were listed on the subject property in the site-specific environmental database report reviewed by AECOM or otherwise identified during AECOM's review of historical aerial photographs.

2.3.7 Underground Storage Tanks

One (1) underground storage tank (UST) containing propane of an unknown capacity was observed adjacent north of the control building on the east central portion of the subject property during site reconnaissance. Due to the nature of propane (gas at normal temperature and pressure), this propane storage is not considered a significant concern.

2.3.8 Solid Waste

No solid waste was observed at the subject property. Based on the lack activities onsite, no solid waste is expected to be generated at the subject property.

2.3.9 Water

Municipal water is not currently provided to the subject property. No potable water wells were observed at the subject property or reported by the site contact to be present on-site. Municipal water is available to the surrounding areas.

2.3.10 Wastewater

No wastewater is currently generated on the subject property.

2.3.11 Stormwater

No stormwater drains were observed on the subject property at the time of AECOM's site reconnaissance. Stormwater from the subject property appears to drain via sheet flow to the Cypress Creek Canal.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

2.3.12 Heating and Cooling

The onsite spillway structure and control building are not equipped with heating or cooling services.

3. Environmental Setting

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of the Cooper City, Florida quadrangle and the Fort Lauderdale South, Florida quadrangle indicate that the subject property elevation ranges from approximately 5 to 11 feet above mean sea level (amsl). Approximately 3.5 acres of the 10.3-acre site consist of the Cypress Creek Canal. However, surface water runoff from the remaining subject areas likely drains via sheet flow to the Cypress Creek Canal at the center of the site.

3.2 Soil/Geology

Site-specific geologic information was not identified during the course of this assessment; however, according to state and regional geologic sources, the subject property lies within the Gold Coast – Florida Bay Physiographic District. This is the area of south and southeastward sluggish drainage from Lake Okeechobee. The rocks and sediment are Pleistocene aged and are largely limestones or limestone cap rocks. The site lies within the sub classification of the Southern Atlantic Coastal Strip Subdistrict. The subdistrict consists of a broad ridge underlain by sand and shelly sand that probably originated as a shoal. Very gentle slopes exist on the westward side. The eastern side is more complex having been subsequently modified by marine processes. Within the Southern Atlantic Coastal Strip are six (6) geologically distinct sections. The subject site lies within the Pompano-Fort Lauderdale Gap. This is an area with no detectable coastal ridge; the elevations are generally 10-12 feet amsl (UF, 1981).

Surface soils at the subject property are mapped as the Udorthents, Udorthents-Urban land complex, and Margate fine sand (USDA, 2015). Udorthents soils consists of unconsolidated or heterogeneous geologic material removed in the excavation of ditches, canals, lakes and ponds. It is commonly piled along banks and has slopes of 2 to 40 percent. The soil is moderately well drained. Weeds and native grasses have become established in some areas of Udorthents. Other areas have little or no vegetation. The soil material is erodible, especially where slopes are steep and where areas are bare or sparsely vegetated. This soil is unsuited to cultivated crops, citrus, or improved pasture. It is frequently used as a source of roadbuilding material and as a source of fill for new homesites, golf courses, and other purposes. The Udorthents-Urban land complex is about 50 to 70 percent of this complex consists of Udorthents, which are in open areas; and about 30 to 50 percent consists of Urban land, or areas covered by concrete and buildings. The areas of these components are so intermixed or so small that to map them separately at the scale of mapping used is impractical. The open areas of Udorthents are lawns, vacant lots, parks, and playgrounds. Urban land consists of streets, sidewalks, parking lots and buildings or other construction where the soil is covered and cannot be readily observed. Margate fine sand is a nearly level, poorly drained, sandy soil that is underlain by limestone at a depth of 20 to 40 inches but has solution holes as deep as 60 inches. It is on nearly level, low terraces between the Everglades and the low, sandy Atlantic Coastal Ridge. Included with this soil are some areas of soils that are similar to Margate fine sand but have a very dark gray or black surface layer less than 6 inches thick to a dark gray or gray surface layer 3 to 6 inches thick. The natural vegetation consists of native grasses, waxmyrtle, and a few cypress trees. Most areas of this soil are in improved pasture and some citrus. This soil is severely limited for cultivated crops by excessive wetness and other poor soil properties. (USDA, 1984).

3.3 Groundwater/Hydrology

Site-specific hydrologic information was not identified during the course of this assessment. Based on topography and geologic conditions, uppermost groundwater likely occurs within 3 to 4 feet of the ground surface at the subject property (USGS, 1995). The uppermost groundwater flow direction likely follows local topography generally southeast and towards the Cypress Creek Canal. It should be noted that the actual depth and flow direction of groundwater beneath the subject property cannot be determined without site-specific groundwater monitoring well data.

4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1947, 1949, 1952, 1958, 1961, 1968, 1973, 1976, 1981, 1988, 1992, 1995, 1999, 2007, 2010, 2015, 2019 and 2023, obtained from EDR;
- Google Earth aerial images dated 1995, 1999, 2002 through 2008, and 2010, 2011, 2014 through 2025;
- Topographic maps dated 1945, 1949, 1962, 1969, 1973, 1983, 1995, 2012, 2015, 2018, and 2021, obtained from EDR;
- City directories for the years 1980, 1990, 1992, 1995, 1999, 2000, 2005, 2010, 2014, 2017, and 2020, obtained from EDR;

Building Department records were not reviewed during the course of this assessment. According to Environmental Data Resources, Inc. (EDR), Sanborn® Fire Insurance Map coverage is not available for the subject property. Copies of the historical documents/reports are provided in Appendix B.

4.1 Subject Property

AECOM's review of historical information indicates that the southern half of the subject property was undeveloped and empty fields are depicted on the northern half of the subject property from at least 1947. By at least 1952, additional land on the southcentral portion of the subject property has been cleared. By at least 1961, the Cypress Creek Canal had been constructed throughout the center of the property as well as the S37B gated spillway structure. By at least 1973, several parked cars are depicted on the northeast corner of the subject property, east of the Cypress Creek Canal, likely associated with the golf course adjacent east of the subject property. An unimproved dirt trail, parallel and west of the Cypress Creek Canal is depicted. By at least 1981, North Palm Aire Drive, which crosses the Cypress Creek Canal on the south end of the subject property is depicted. By at least 1992, the previously depicted parked cars are no longer visible on the northeast corner of the subject property and the dirt trail on the western side of the subject property is a paved sidewalk. By at least 2002, a paved sidewalk is depicted east and parallel to the Cypress Creek Canal. The subject property has generally remained in its current configuration (as observed during AECOM's site visit) since at least 2002. No RECs were identified based on the historical review

4.2 Adjoining Properties and Surrounding Area

The 1947 aerial photograph depicts the northern adjoining property consisting of mostly undisturbed land and a small, narrow canal that extends north to the Pompano Canal which is located adjacent north. By at least 1958, a small, southwest extension of the canal is depicted northwest of the subject property. By at least 1961, the Cypress Creek Canal has been constructed and it extends north from the subject property to adjacent north Pompano Canal. The previously depicted southwest canal extension is not connected to the newly constructed Cypress Creek Canal. By at least 1973, the former area of the Palm Aire Golf Course is depicted on the northeast side of the Cypress Creek Canal. Adjacent northeast of the golf course, the present-day Palm Aire Condominium buildings are depicted. Additionally, unimproved trails are depicted west of the Cypress Creek Canal. By at least 1976, cleared land and a construction Conex box is depicted northwest of the Cypress Creek Canal. By at least 1981, additional Conex boxes and the present-day condominium building is depicted west of the Cypress Creek Canal. By at least 1988, additional condominium buildings, associated asphalt parking lots, and Oaks Drive are depicted northwest of the Cypress Creek Canal. By at least 1995, single family homes are depicted northwest of the Cypress Creek Canal and north of the condominiums. By at least 1999, the single-family home development northwest of the Cypress Creek Canal has been completed. By at least 2014, the earthwork activities are depicted in the former golf course area. By at least 2018, several lakes surrounding the residential condominium communities are depicted northeast of the Cypress Creek Canal. The northern adjoining property has generally remained in its current configuration since at least 2018 (as observed during AECOM's site visit).

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

The 1947 aerial photograph depicts the northeastern half of the eastern adjoining property to consist of cleared, empty fields and southeastern half to consist of undisturbed land. By at least 1952, additional land has been cleared in the east central area of the eastern adjoining property. By at least 1961, an unimproved dirt road extends east/west on southern area of the eastern adjoining property. By at least 1973, the present-day Palm Aire Country Club residential properties, including single-family homes, condominiums, and townhouses are depicted. Dispersed between the residential properties is the Palm Aire Golf Course. Additionally, the golf course maintenance building is depicted northeast of subject property on the eastern adjoining property. By at least 2014, lakes are depicted in the former golf course areas. The area has generally remained in its current configuration (as observed during AECOM's site visit) since at least 2014.

The 1947 aerial photograph depicts the southern adjoining property to consist of mostly undisturbed land and a small, empty field to the southeast. By at least 1952, a narrow ditch is depicted in central portion of the southern adjoining property, extending east. By at least 1958, additional land has been cleared and empty fields are depicted. By at least 1961, the Cypress Creek Canal has been constructed and extends south from the subject property and then east. East of the canal, the present-day Palm Aire Golf Course is depicted. By at least 1968, North Palm Aire Drive is depicted and a dirt trail west and parallel to the Cypress Creek Canal is depicted. By at least 1973, multiple condominium buildings and a community pool are depicted surrounding the golf course area, southeast of the Cypress Creek Canal. Also depicted is residential construction southwest of the Cypress Creek Canal. West, beyond the residential construction, a golf course is depicted. By at least 1976, residential construction has been completed and Oaks Drive is depicted. By at least 1981, the North Palm Aire Drive bridge, crossing the Cypress Creek Canal, has been constructed and additional condominium buildings are depicted on southwest of the Cypress Creek Canal. The southern adjoining property has generally remained in its current configuration since at least 1981 (as observed during AECOM's site visit).

The 1947 aerial photograph depicts a portion of the northwestern half of the western adjoining property to consist of a cleared, empty field and the remaining portions to consist of undisturbed land. By at least 1958, a small canal system in which one canal extends southwest/northeast connects to another small canal that extends south is depicted. By at least 1973, the southern canal extension is no longer depicted and the present-day Palm Aire Golf Course has been constructed on the northwestern portion of the western adjoining property. Additionally, condominium construction is depicted in the southeastern portion of the western adjoining property. By at least 1976, multiple condominium buildings and two community pools have been constructed in the southwestern portion of the western adjoining property. Condominium construction continues north until at least 1988. Oaks Drive, which extends north/south and parallel to the Cypress Creek Canal has been constructed. By at least 1992, the present-day condominiums and lakes have been constructed and the western adjoining property has generally remained in its current configuration (as observed during AECOM's site visit).

4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were neither identified during this assessment, nor were they provided by the Client for review.

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5. Database and Records Review

5.1 User Provided Information

Section 6 of ASTM E1527-21 states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the Phase I ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the Phase I ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from ASTM E1527-21; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Land Title and Judicial Records for Environmental Liens and Activity and Use Limitations

Information pertaining to chain-of-title, environmental liens or activity and use limitation was not provided to AECOM by the User (i.e., the client), nor was AECOM contracted to obtain information pertaining to chain-of-title, environmental liens or activity and use limitations. Environmental agency databases as provided by EDR show no indication of deed restrictions or activity and use limitations due to a release of hazardous materials.

5.3 Database Information

In accordance with the scope of work and ASTM E1527-21, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report. It should be noted that this information is reported as AECOM received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either AECOM or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. One (1) additional site, Just Tires & Auto Service Corp, was identified within the database report; however, EDR was not able to map them to specific locations due to insufficient/contradicting address information. This site was included in the database report as "orphan" sites. Based upon AECOM's review, there does not appear to be any significant concerns associated with the orphan site. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix C.

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

5.3.1 Subject Property

The subject property was not identified in the site-specific environmental database report.

5.3.2 Surrounding Sites

According to the environmental database report, numerous sites (over 20) were identified within their respective ASTM E1527-21 and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance

Copyright © 2025 by AECOM
All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

from the subject property, regulatory status (i.e., closed, no violations found), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Due to its proximity to the subject property, the following site is discussed in additional detail:

- Former Palm Aire Golf Course; Phase 2A Area; Area III; and Northwest Area, Pompano Beach, Facility ID: BF061604000, BF061601000, BF061503000, and BF069901000. The Brownfields area locations range from approximately 1,857 feet north; 1,641 feet north; 1,907 feet north-northwest; and 2,361 feet northeast of the subject property, respectively. These areas are listed on the Brownfields database. The Northwest Area has a resolution date of November 23, 1999. Area III has a resolution date of November 8, 2016. Phase 2A Area has a resolution date of February 9, 2016. The Former Palm Aire Golf Course has a resolution date of November 10, 2015. No additional information is provided. Brownfields are real property; the expansion, redevelopment, or reuse of which may be complicated by the presence, potential or perceived presence of a hazardous substance, pollutant, or contaminant. A Brownfields area does not imply contamination; the environmental status of sites within a Brownfields area can only be evaluated by environmental assessments. These Brownfield listings do not in itself constitute a REC.

- Palm Aire Golf Course Maintenance, 3211 North Palm Aire Drive, Facility ID: 9046888 and ERIC_6838. This facility is located approximately 280 feet west of the subject property. The site is listed on the Leaking Underground Storage Tank (LUST), UST, AST, Engineering Controls (ENG Controls) Institutional Controls (INST Controls), Broward County Early Detection Incentive/Environmental Assessment Remediation (EDIEAR), Financial Assurance, Broward County HM, Responsible Party (RESP Party), and National Pollutant Discharge Elimination System (NPDES) databases. According to a Site Manager Summary Report, a discharge was reported on February 1992 in response to diesel contamination based on organic vapor analyzer (OVA) readings and groundwater analytical data. A Site Assessment Report (SAR) was approved in December 1993. The SAR was not available for review on FDEP's Nexus or OCULUS databases. No Further Action (NFA) was recommended in August 1995 and the discharge was granted NFA status and a Site Rehabilitation Completion Order (SRCO) on September 18,1995. In regard to the ENG Controls, INST Controls, EDIEAR, RESP Party, and NPDES database listings, an Institutional Controls and Engineering Controls Audit Report completed by Arcadis, Inc., dated June 28, 2024, states an area approximately 2,100 feet northwest of the subject property is identified with the Facility ID, ERIC_6838. This area was incorrectly mapped by EDR and is associated with the Brownsfields listings above. The area is now called the West Atlantic Boulevard Apartments. This area was historically part of the larger golf course and country club (Former Palm Aire Golf Course). This area is not part of the Palm Aire Community and given the distance to the subject property, is not considered a REC to the subject property, in AECOM's opinion.
- Palm Aire Country Club B#117, 3499 Oaks Way 117, Facility ID: 9801752, is located approximately 703 feet northwest of the subject property. This site is listed on the LUST, UST, Florida Division of Waste Management Contamination (DWM CONTAM), and Broward County Hazardous Materials (HM) databases. According to the available information reviewed, the condominium building No. 117 formerly contained one (1) 500-gallon single wall steel UST containing diesel fuel. The UST was removed and a Tank Closure Assessment Report (TCAR) was completed on July 2, 1999. Seven (7) soil samples and five (5) groundwater samples were collected. The results of the TCAR did not identify the presence of petroleum hydrocarbons in the soil or groundwater samples collected for the assessment. However, according to correspondence between the Palm Aire County Club and the Broward County Pollution Prevention and Remediation Division, a TCAR Addendum was performed on March 4, 2005. Two (2) soil samples were collected within the vicinity of the former UST. The results from the addendum assessment concluded that petroleum hydrocarbons were not detected above the laboratory method detection limits. NFA was recommended, and according to FDEP correspondence dated May 24, 2005, the facility received NFA status and a SRCO. Additionally, this facility maintains a hazardous materials license for a diesel generator. No discharges associated with the generator have been reported. Since this facility has been remediated to the satisfaction of the FDEP, this listing is not considered a REC to the subject property, in AECOM's opinion.

All rights reserved. No part of this copyrighted work may be reproduced, distributed, or transmitted in any form or by any means without the prior written permission of AECOM.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 VES as part of this assessment. This screening was conducted in general accordance with the ASTM E2600-22. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

5.4.1 Subject Property

No on-site sources of vapor encroachment (e.g., UST, contaminated soil, groundwater plume, etc.) were identified during this assessment. Based on this information, a VEC due to an on-site source does not appear to exist.

5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (CVOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that no CVOC/SVOC and one (1) petroleum hydrocarbon impacted site, Palm Aire Golf Course Maintenance, are located with the above-described radii of the subject property. However, the identified site can be ruled out due to their regulatory status (i.e., regulatory closure has been issued), media impacted (i.e., soil only), and/or topographical position from the subject property (i.e., down-gradient or cross-gradient). Based on this information, it is AECOM's opinion that a VEC at the subject property due to an off-site source does not appear to exist.

5.5 Agency File Review

5.5.1 Local

AECOM submitted a Public Records Request to the Pompano Beach Fire Rescue on June 3, 2025, to determine if they have files related to a historical hazardous materials release that may have occurred at the subject property. As of the date of this report, a response to AECOM's PRR has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the Pompano Beach Fire Rescue to our PRR will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIA request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

5.5.2 County

AECOM reviewed the Broward County Property Appraiser's and ENVIROS online databases for records pertaining to the subject property's physical and parcel addresses. No records were identified for the subject property physical and parcel addresses.

5.5.3 State

AECOM submitted a Public Records Request to the FDEP on June 3, 2025, for information pertaining to the generation, transportation, storage, treatment and/or disposal of hazardous waste as well as any historical petroleum or chemical releases, leaking petroleum tanks, environmental assessment activities, and/or notices of

violation that may have occurred on the subject property. No information was received during the time frame of this assessment. AECOM searched the FDEP Nexus Information Portal online database.

5.5.4 Federal

AECOM searched the U.S. EPA's Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potentially hazardous waste sites. The subject property was not listed on the Envirofacts or SEMS databases.

6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM E1527-21, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings of this Phase I ESA and the opinions of the environmental professional.

6.1 Recognized Environmental Conditions

Based on the above-described activities, no RECs were identified in connection with the subject property.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the subject property.

6.4 Vapor Encroachment Conditions

Based on the above-described activities, no VECs were identified in connection with the subject property.

6.5 De Minimis Conditions

Based on the above-described activities, no DMCs were identified in connection with the subject property.

6.6 Significant Data Gaps

ASTM E1527-21 requires the environmental professional document significant data gaps, as well as any exceptions to, or deletions from the ASTM Practice E1527-21. A significant data gap is a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Based on the above-described activities, no significant data gaps were identified during this Phase I ESA.

7. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the S37B Gated Spillway Facility identified by Broward County PINs 4942-04-00-0600 (portion) & 4942-04-00-0910 (portion) in Pompano Beach, Broward County, Florida, the subject property. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.

8. Environmental Professional Statement

Mr. Madabhushi was the Environmental Professional (EP) for this project. Mr. Madabhushi's EP statement is below and her resume is provided in Appendix D:

I declare that, to the best of my professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

STRUCTURE 37B

This structure is a reinforced concrete, gated spillway with discharge controlled by two stem operated, vertical lift gates. Operation of the gates is automatically controlled so that the gate operating system opens or closes the gate in accordance with the seasonal operational criteria. The structure is located on Canal 14, 3300 feet south of the intersection of C-14 and the Pompano Canal.

PURPOSE

This structure maintains optimum upstream water control stages in Canal 14; it passes the design flood (40% and 60% of the Standard Project Flood from the western and eastern portions of the drainage area, respectively) without exceeding the upstream flood design stage, and restricts downstream flood stages and channel velocities to non-damaging levels; and it prevents saline intrusion.

OPERATING CRITERIA

This structure is normally operated to maintain an optimum water surface elevation of 7.0 feet insofar as possible. The normal automatic operation is actuated by the headwater elevation as follows:

When the headwater elevation rises to 7.2 feet, the gates begin to open at six inches per minute. The amount of opening is described below.

When the headwater elevation rises or falls to elevation 7.0 feet, the gates become stationary.

When the headwater elevation falls to 6.8 feet, the gates begin to close.

The automatic operating mechanism positions the gate in such a way that the gate opening is inversely proportional to the headwater elevation. The non-linear relationship between the gate opening and the headwater elevation is such that the design discharge is the maximum that will pass the structure. Greater flows reaching the structure are retained in storage. Should the storage be insufficient to retain the entire inflow, either the structure will be overtopped, or control must be placed on manual operation and flows larger than the capacity released.

Closing level raised from 6.5 to 6.8 feet to provide irrigation water for golf course.

Revised 11/14/1997

During dry periods, the headwater elevation at the structure may be raised for water conservation.

When the headwater elevation rises to 8.0 feet, the gates begin to open at six inches per minute. The amount of opening is described below

When the headwater elevation rises or falls to elevation 7.5 feet, the gates become stationary.

When the headwater elevation falls to 7.0 feet, the gates begin to close.

The automatic operating mechanism positions the gate in such a way that the gate opening is inversely proportional to the headwater elevation. The non-linear relationship between the gate opening and the headwater elevation is such that the design discharge is the maximum that will pass the structure. Greater flows reaching the structure are retained in storage. Should the storage be insufficient to retain the entire inflow, either the structure will be overtopped, or control must be placed on manual operation and flows larger than the capacity released.

FLOOD DISCHARGE CHARACTERISTICS

	Design	Standard Project Flood
Discharge Rate	3390 cfs	3390 cfs
	60 % SPF	100 % SPF
Headwater Elevation	7.2 feet	9.0 feet
Tailwater Elevation	4.7 feet	5.5 feet
Type Discharge	Uncontrolled submerged	Controlled submerged

DESCRIPTION OF STRUCTURE

Type reinforced concrete, gated spillway

Weir Crest

Secretary

MAY 2 4 2005

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

Ms. Kathy Jenkins
Palm Aire Country Club Condominium Association, No.11, Inc.
1280 SW 36th Avenue, Suite 301
Pompano Beach, FL 33064

Subject: Site Rehabilitation Completion Order
Palm Aire Country Club, Condominium Building # 117
3499 Oaks Way
Pompano Beach, Broward County
FDEP Facility ID # 069801752
Discharge Date: July 12, 1999 (Non-program)

Dear Ms. Jenkins:

The Broward County Environmental Protection Department (EPD) has reviewed the Site Assessment Report (SAR) and No Further Action Proposal (NFAP) dated March 4, 2005 (received March 10, 2005), and the Site Assessment Report (SAR) Addendum dated March 18, 2005 (received March 22, 2005), prepared and submitted by Florida Environmental Engineering, Inc. for the petroleum product discharge discovered at this site. Documentation submitted with the NFAP confirms that criteria set forth in Rule 62-770.680(1), Florida Administrative Code (F.A.C.), have been met. The NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the site for petroleum product contamination associated with the discharge listed above, except as set forth below.

In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the site, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the NFAP or otherwise allowed by Chapter 62-770, F.A.C.

Legal Issues

The Department's Order shall become final unless a timely petition for an administrative proceeding (hearing) is filed under Sections 120.569 and 120.57, Florida

Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for a hearing are set forth below.

Persons affected by this Order have the following options:

(A) If you choose to accept the Department's decision regarding the NFAP you do not have to do anything. This Order is final and effective as of the date on the top of the first page of this Order.

(B) If you choose to challenge the decision, you may do the following:

(1) File a request for an extension of time to file a petition for hearing with the Agency Clerk in the Office of General Counsel of the Department within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for hearing; or

(2) File a petition for administrative hearing with the Agency Clerk in the Office of General Counsel of the Department within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for Administrative Hearing

For good cause shown, pursuant to Rule 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for hearing. Such a request must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Palm Aire Country Club Condominium Association, No.11, Inc., shall mail a copy of the request to Ms. Kathy Jenkins of Palm Aire Country Club Condominium Association, No.11, Inc. at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for administrative hearing must be made.

How to File a Petition for Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Palm Aire Country Club Condominium Association, No.11, Inc., shall mail a copy of the petition to Ms. Kathy

Jenkins of Palm Aire Country Club Condominium Association, No.11, Inc. at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsections 120.54(5)(b)4. and 120.569(2), F.S., and Rule 28-106.201, F.A.C., a petition for administrative hearing shall contain the following information:

(a) The name, address, and telephone number of each petitioner, the name, address, and telephone number of the petitioner's representative, if any, the site owner's name and address, if different from the petitioner, the FDEP facility number, and the name and address of the facility;
(b) A statement of when and how each petitioner received notice of the Department's action or proposed action;
(c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;
(d) A statement of the material facts disputed by the petitioner, or a statement that there are no disputed facts;
(e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;
(f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
(g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective as of the date on the top of the first page of this Order. Timely filing a petition for administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the clerk of the Department (see below).

Questions

Any questions regarding the EPD's review of your NFAP should be directed to Paul Waite at (954) 519-1467. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for administrative hearing or request for an extension of time to file a petition for administrative hearing.

The FDEP Facility Number for this site is 069801752. Please use this identification on all future correspondence with the Department or the EPD.

Sincerely,

Michael E. Ashey, Chief (acting)
Bureau of Petroleum Storage Systems

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Broward County, Florida, East Part
Survey Area Data: Version 20, Aug 20, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 14, 2022—Jan 24, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
19	Margate fine sand, occasionally ponded, 0 to 1 percent slopes	1.0	10.2%
38	Udorthents, shaped	3.9	40.0%
39	Udorthents-Urban land complex	0.1	1.2%
99	Water	4.7	48.6%
Totals for Area of Interest		**9.7**	**100.0%**

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 5A9B-47FD-8FC0

PO # 60741079

Project Broward Spillway Assessment

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 5A9B-47FD-8FC0

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

AECOM (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 02/17/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state and tribal leaking storage tanks

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's PCTO1--Petroleum Contamination Detail Report.

A review of the LUST list, as provided by EDR, and dated 01/21/2025 has revealed that there are 6 LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 9 UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

ENG CONTROLS: The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass avariety of engineered remedies to contain and/or reduce , contamination , and/or physical barriers intended to limit access to property ECs include fences, signs, guards, landfill caps, provision of potable water , slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

A review of the ENG CONTROLS list, as provided by EDR, and dated 09/12/2024 has revealed that there is 1 ENG CONTROLS site within approximately 0.5 miles of the target property.

Lists of state and tribal brownfield sites

BROWNFIELDS: Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination.

A review of the BROWNFIELDS list, as provided by EDR, has revealed that there are 6 BROWNFIELDS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 6 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are

6 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HAZ WASTE: The records in this data set are generated by county SQG Assessment, Notification and Verification Programs on-site surveys (see 403.7225 FS). The waste records are wastes observed during county inspections. Even though this state program targets SQGs and VSQGs for outreach, some counties choose to additionally look at their LQGs.

A review of the HAZ WASTE list, as provided by EDR, and dated 02/10/2025 has revealed that there are 4 HAZ WASTE sites within approximately 0.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/27/2025
Date Data Arrived at EDR: 04/01/2025
Date Made Active in Reports: 04/24/2025
Number of Days to Update: 23

Source: EPA
Telephone: N/A
Last EDR Contact: 06/02/2025
Next Scheduled EDR Contact: 07/07/2025
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/27/2025
Date Data Arrived at EDR: 04/01/2025
Date Made Active in Reports: 04/24/2025
Number of Days to Update: 23

Telephone: N/A
Last EDR Contact: 06/02/2025
Next Scheduled EDR Contact: 07/07/2025
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Last EDR Contact: 08/15/2011
Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/27/2025
Date Data Arrived at EDR: 04/01/2025
Date Made Active in Reports: 04/24/2025

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal brownfield sites

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

DADE CO LW: Liquid Waste Transporter List
The Liquid Waste Transporter permit regulates the transportation of various types of liquid and solid waste, including hazardous waste, waste oil and oily waste waters, septic and grease trap waste, biomedical waste, spent radiator fluid, photo chemical waste, dry sewage sludge, and other types of non-hazardous industrial waste. The Liquid Waste Transporter permits needed to protect the environment and the public from improperly handled and transported waste.

DADE MOP: Marine Facilities Operating Permit

What is this permit used for? Miami-Dade County Ordinance 89-104 and Section 24-18 of the Code of Miami-Dade County require the following types of marine facilities to obtain annual operating permits from DERM: All recreational boat docking facilities with ten (10) or more boat slips, moorings, davit spaces, and vessel tie-up spaces. All boat storage facilities contiguous to tidal waters in Miami-Dade County with ten (10) or more dry storage spaces including boatyards and boat manufacturing facilities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/02/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

S-37B SPILLWAY
3090 N COURSE DR
POMPANO BEACH, FL 33069

TARGET PROPERTY COORDINATES

Latitude (North):	26.224295 - 26° 13' 27.46''
Longitude (West):	80.170513 - 80° 10' 13.85''
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	582858.1
UTM Y (Meters):	2900624.8
Elevation:	12 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	17176293 FORT LAUDERDALE NORTH, FL
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

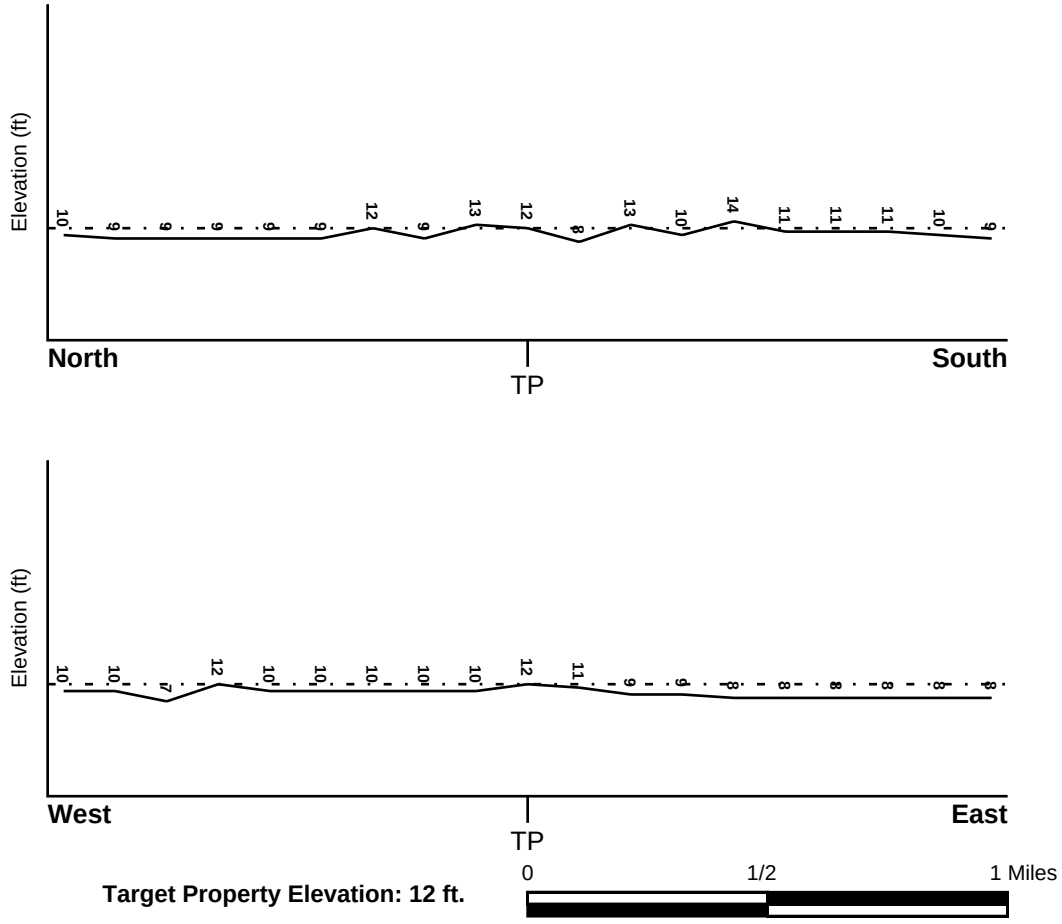
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 12 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
12011C0356H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
12011C0357H	FEMA FIRM Flood data
12011C0359H	FEMA FIRM Flood data
12011C0358H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
FORT LAUDERDALE NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
P64	1/2 - 1 Mile NNW	VARIES
78	1/2 - 1 Mile NE	SW
1G	1/2 - 1 Mile NNW	VARIES
2G	1/2 - 1 Mile NE	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:	Water
Soil Surface Texture:	
Hydrologic Group:	Not reported
Soil Drainage Class:	
Hydric Status: Unknown	
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name:	Udorthents, shaped
Soil Surface Texture:	cobbly sand
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Somewhat poorly drained
Hydric Status: Unknown	
Corrosion Potential - Uncoated Steel:	High
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 92 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	cobbly sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	29 inches	50 inches	sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	50 inches	50 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

Soil Map ID: 3

Soil Component Name: Margate

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 77 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
2	7 inches	16 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
3	16 inches	27 inches	fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
4	27 inches	31 inches	gravelly fine sand	Not reported	Not reported	Max: 141 Min: 14	Max: Min:
5	31 inches	31 inches	bedrock	Not reported	Not reported	Max: 141 Min: 14	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 4

Soil Component Name: Udorthents

Soil Surface Texture: cobbly sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Babu Madabhushi, PhD

Years of experience
31 total | 25 with AECOM

Babu has 31 years of experience in conducting and managing environmental engineering projects. His technical expertise is in the areas of conducting contamination assessment, evaluation, water/wastewater treatment, groundwater treatment, remedial system operation and maintenance.

Babu is extremely knowledgeable of FDOT District Four, Florida's Turnpike Enterprise, DERM, FDEP and local regulations and standards. His expertise also encompasses sediment characterization, dredge design, RCRA Facility Investigation, contamination assessment, impact assessment, remedial investigation and feasibility studies, soil and groundwater remediation, in-situ bioremediation, and operation and maintenance of remedial systems.

Professional experience

Contamination Assessment and Remediation Services - BEE68, FDOT District Four (2022 – Present). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Assessment and Remediation Services - BE678, FDOT District Four (2020 – 2022). Managing CAR Contract that included several task orders for projects that require soil and groundwater assessment, dewatering treatment and management, and regulatory agency coordination. The projects are located in Broward, Palm Beach, St. Lucie, and Martin Counties.

Contamination Evaluation and Screening -PD&E Studies, FDOT District Six, Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, Miami Gardens to County Line), St. Lucie (SR-80), Martin, and Monroe (US-1) Counties, FL (2003 – 2021). Developed CSER for more than 30 project locations and Re-Evaluation Reports for several FDOT projects in Miami-Dade (SR-826, NW 74th St), Broward (I-95 Express Lanes, SW 10th St, I-95), St. Lucie (SR-80), Martin, and Monroe (US-1) counties.

SR-826/Palmetto Expressway from north of NW 25th St to North of NW 104th St CSER, FDOT District Six, Miami-Dade County, FL (2022 – 2024). Contamination lead for the FDOT PLEMO with environmental assessment support services for the SR-826/Palmetto Expressway CSER. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential.

SR-826/Palmetto Expressway from South of NW 25th St to North of NW 154th St SEIR, FDOT District Six, Miami-Dade County, FL (2020 – 2021). Contamination Lead to provide the FDOT PLEMO with environmental assessment support services for the SR 826 / Palmetto Expressway SEIR. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on contamination potential**.**

I-95 from South of NW 10th St to North of Hillsboro Boulevard, FDOT District Four, Broward County, FL (2017 – 2021). Contamination Lead for environmental tasks associated with the performance of a PD&E Study. Tasks include Contamination Lead to provide the FDOT PLEMO with environmental assessment support services. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential**.**

Education

PhD, Hazardous Waste Management, West Virginia University, 1997
MS, Wastewater Treatment, Indian Institute of Technology, 1993
BS, Civil Engineering, Kakatiya University, 1988

Expertise

CAR Project Manager
Contamination Assessment
Remedial Design
Remedial Action Implementation
Water/Wastewater Treatment
Groundwater Treatment
Remedial System Operation and Maintenance
Sediment Characterization

Training

40-hr OSHA HAZWOPER
8-hr OSHA HAZWOPER Annual Refresher

Registrations/Certifications

AECOM Certified Project Manager
AECOM Lead Verifier: In Situ Bioremediation

SR-826/Palmetto Expressway from US-1 (SR-5) to SR-836 / Dolphin Expressway, FDOT District Six, Miami-Dade County, FL (2018 – Present). Contamination lead for environmental tasks associated with the performance of an approximate 7-mile PD&E Study**.** Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

I-75 from Miami-Dade County Line to SR-826 (Palmetto Expressway) PD&E Study, FDOT District Six, Miami-Dade County, FL (2007 – Present). Contamination lead for the performance of a PD&E Study. Tasks include performance of the Level I contamination assessment, provide recommendations for Level II after ranking the sites based on their contamination potential.

Wagner Creek/Seybold Canal Contaminated Sediment Dredging and Disposal (2017 – Present). Managed this critical project in a heavily commercialized area near Jackson Hospital. This included sediment dredge design, permitting, contaminated sediment characterization/handling, sediment stabilization, turbidity control and disposal at out of state landfill. Won multiple awards (from FDEP and other entities) for successfully completing this under budget and within schedule without harming the manatees.

Former Eaker Air Force Base Remediation, U.S. Air Force, Blytheville, AR (2011 – 2021). Project manager for this performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Eaker AFB. The sites are contaminated with petroleum compounds, light non-aqueous phase liquid, chlorinated solvents, and arsenic. Services include remedial investigation, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Miami Dade DERM-14/E20 Contracts, Miami-Dade Aviation Department, Miami International Airport, Opa Locka Airport, Public Housing, Northwest Cargo Area, Miami, FL (2002 – 2021). Managed several projects that included delineation of petroleum, chlorinated solvent, and metals contamination at these properties. Installed several deep nested wells to delineate contamination in various zones of the aquifer. Multiple wells were installed in the vicinity of the runways, in the public right of way, and in the vicinity of residential areas. Currently overseeing the long-term groundwater monitoring activities.

Former Homestead Air Force Base Remediation, US Air Force, Homestead, FL (2011 – 2021). Deputy project manager for a performance-based remediation contract to obtain unrestricted closure for four former RCRA sites at the former Homestead AFB. The sites are contaminated with petroleum compounds, chlorinated solvents, and arsenic. Services include remedial investigation, preparation of Explanation of Significant Differences (ESD) to Record of Decision (ROD) document, innovative remediation enhancements, contaminated soil removal, in-situ soil and groundwater remediation, storage tank removal, remedial design modifications, GIS mapping and support, groundwater modeling, and routine regulatory interaction. After successful completion or remedial investigation, the site is currently undergoing active groundwater remediation. He is also responsible for performing EPA's 5-Year Review Process.

Contamination Evaluation Studies, FGT, Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe Counties, FL, (2006 – Present). Contamination Specialist, responsible for developing contamination evaluation reports and Contingency Plans for numerous project locations in Miami-Dade, Broward, St. Lucie, Martin, Bradford, Hillsborough, Orange, and Monroe counties for projects associated with hydrotesting, pipeline maintenance/repairs and pipeline abandonment work.

Blue Lagoon Post Office Site Assessment, Remediation, and Methane Collection System, US Postal Service, Miami, FL (2003 – Present). Project Manager/Senior Environmental engineer for contamination assessment at a facility constructed over a filled-in canal where lead was found in the soil above state cleanup levels. Work included soil and groundwater remediation activities and methane gas collection system design and monitoring. Currently, AECOM is performing natural attenuation monitoring and methane gas monitoring.

Remediation Engineering, Federal Aviation Administration (FAA), William J. Hughes Technical Center, Atlantic City, NJ (2005 – 2012). Remediation engineering task leader for operation and maintenance of treatment systems for approximately 5,000-acre CERCLA Superfund site at Areas B, D, 20A, 29, and Area 41. Assisted with operation and maintenance of the existing Central Treatment Plant (Pump and Treat System) to treat petroleum contaminated water. Provided innovative remediation enhancements, such as in-situ aerobic bioremediation of petroleum compounds and reductive dechlorination of chlorinated solvents, contaminated soil removal, vapor extraction, groundwater and soil investigations, GIS mapping and support, groundwater modeling, and routine regulatory interaction.

Broward County Spillways
Broward County, Florida
Contract # 4600004507 / Work Order # 14
AECOM Job #: 60741079

Dear Mr. Horan:

AECOM Technical Services Inc. (AECOM) is pleased to submit this Limited Phase II Environmental Site Assessment (ESA) Report that includes the assessment of the sediment and soil at four (4) Broward County spillway sites and one (1) pump station, located throughout the eastern region of Broward County, Florida. This report was prepared in accordance with Work Order No. 14 authorized by the South Florida Water Management District (District).

AECOM appreciates the opportunity to support the District on this important project. If you have any questions regarding the information in this report or this project, please contact AECOM at your convenience.

Respectfully Submitted,

AECOM TECHNICAL SERVICES, INC.

Babu Madabhushi
Project Manager

Limited Phase II ESA Report
Broward County Spillways
Broward County, Florida
Contract # 4600004507 / Work Order # 14

1.0 INTRODUCTION

AECOM Technical Services, Inc. (AECOM) is pleased to present to the South Florida Water Management District (District) this Limited Phase II Environmental Site Assessment (ESA) Report that includes the assessment of the sediment and soil at four (4) Broward County spillway sites and one (1) pump station, located throughout the eastern region of Broward County, Florida. A general site vicinity map is included as Figure 1.

The purpose of this assessment is to characterize the sediment in the vicinity of each spillway or pump station and screen soils along their respective canal banks and evaluate whether the materials are considered contaminated per Chapter 62-777 of the Florida Administrative Code (FAC).

This project was conducted in accordance with Work Order No. 14 dated October 30, 2024, under AECOM's contract number 4600004507.

2.0 OBJECTIVE

The objective is to characterize the sediment and soil in the vicinity of spillway sites S33, S36, S37A, G57 and pump station S13 for organochlorine pesticides, petroleum hydrocarbons, and 8 Resource Conservation and Recovery Act (RCRA) metals to evaluate if the materials are considered contaminated in accordance with Chapter 62-777 of the FAC.

3.0 FIELD SAMPLING METHODOLOGY

The following sections provide details of the general field and laboratory methodology used for the sediment and soil sampling and analysis.

All sample locations were recorded with a handheld Global Positioning System (GPS) receiver utilizing units of latitude and longitude in North American Datum (NAD) 83. These sediment and soil sample locations were illustrated on Figures 2 through 6 for sites S33, S36, S37A, G57, and S13, respectively. The GPS coordinates of sediment and soil locations are provided in Table 1 and Table 2, respectively.

3.1 Sediments

3.1.1. Depth to Sediment Evaluation

All depth to sediment readings were recorded approximately in the central portion of the spillway and pump station canals. Prior to the sediment sample collection, approximate depth to sediment was recorded at each location using a graduated pole with extensions. The depth to sediment was gauged

when the bottom of the pole encountered the top of the sediment. Sediment samples (for laboratory analysis) were collected at the same locations.

Sediment was encountered at depths ranging from 3.9 feet to 9.7 feet below the water surface. The sediments collected in the project areas consisted of a gray to dark gray and brown to dark brown, very fine-grained silty and clayey sands with shell and rock fragments, organic clays, and muck.

The depths to sediment, average depths to sediment at each site, and lithologic descriptions are provided in Table 1. Copies of the sediment sample logs are provided in Appendix A.

3.1.2. Sampling Procedure

On January 20, 2025, utilizing a motorized boat, two (2) sediment samples were collected from each of the four (4) spillway sites per the approved sampling plan, resulting in a total of eight (8) sediment samples. Prior to the sample collection at each location, the boat was anchored, and the motor was turned off. On April 15, 2025, utilizing a Jon boat, two (2) sediment samples were collected from the S13 pump station site per the approved sampling plan.

After the depth to sediment was recorded, sediment sample was collected from the upper foot of sediment, using a stainless-steel hand auger and transferred into a stainless-steel mixing bowl. At each sediment sample point, a pre-cleaned stainless-steel hand auger with extensions, stainless-steel bowl, and stainless-steel spoon were used for sample collection and homogenization.

Immediately following collection and homogenization, samples were transferred to laboratory-supplied jars. The sample jars were labeled with the sample identification, sample date and time. Each sample was then preserved on ice in a cooler to be shipped to the laboratory for analysis.

Sampling equipment was decontaminated between each sample location. Decontamination included washing sampling equipment with Alconox, rinsing with deionized water, spraying with alcohol, and a final rinsing with deionized water.

3.2 Soil Sampling

On January 23 and 24, 2025, a total of 15 soil samples were collected from the spillway sites, plus one (1) split (duplicate) sample. Of the 15 samples, 10 were composites, each representing two (2) soil boring locations. The total number of soil boring locations was 25. On April 11, 2025, a total of six (6) soil samples were collected from the S13 pump station site. Of the six (6) samples, two (2) were composites, each representing two (2) soil boring locations. The following summarizes the sample collection details for each site:

- S13: 2 composite samples (4 boring locations) and 2 discrete samples (6 boring locations total)
- S33: 2 composite samples (4 boring locations) and 1 discrete sample (5 boring locations total)
- S36: 4 composite samples (8 boring locations total)
- S37A: 4 individual samples + 1 split sample (4 boring locations total)
- G57: 4 composite samples (8 boring locations total)

Soil samples were collected using stainless-steel hand auger to the observed depth-to-water (DTW). Where the DTW was not observed, the soil boring was advanced to a maximum of six (6) feet below land surface (bls). At several locations, auger refusal occurred prior to reaching the DTW due to the subsurface lithology, which consisted of predominantly fractured limestone and rock fragments. Soil lithology was recorded in soil boring logs, which are included in Appendix A.

At each soil boring location, a pre-cleaned stainless-steel hand auger, stainless-steel bowl, and stainless-steel spoon were used for sample collection and homogenization. For composite samples, soil collected from each of the two borings was thoroughly mixed in a stainless-steel bowl using a stainless-steel spoon.

Immediately following collection and homogenization, samples were transferred to laboratory-supplied jars. The sample jars were labeled with the sample identification, sample date and time. Each sample was then preserved on ice in a cooler.

Sampling equipment was decontaminated between each sample location. Decontamination included washing sampling equipment with Alconox, rinsing with deionized water, spraying with alcohol, and a final rinsing with deionized water.

3.3 Sediment and Soil Analysis

Samples were submitted to Jupiter Environmental Laboratories, Inc. (JEL), a State and District approved laboratory located in Jupiter, Florida. One (1) split soil sample was analyzed by Eurofins Analytical, a State and District approved laboratory. Samples were submitted following chain-of-custody (COC) procedures.

Based on correspondence with the District and an approved sampling plan, the sediments and soils were evaluated for the following:

- Organochlorine Pesticides (OCPs) by Environmental Protection Agency (EPA) Method 8081
- Total Recoverable Petroleum Hydrocarbons (TRPH) by FL-PRO Method
- 8 RCRA Metals (arsenic, barium, cadmium, chromium, lead, selenium, and silver) by EPA Method 6010B, and for mercury by EPA Method 7471A

4.0 RESULTS

The sediment and soil samples were collected from within the Broward County spillway sites S33, S36, S37A, G57, and pump station S13. The analytical results obtained from this sampling event are presented in the following sections.

4.1 Sediment Analytical Results

Sediment concentrations were compared to the Soil Cleanup Target Levels (SCTLs) as provided in Chapter 62-777, FAC. The SCTLs include Residential Direct Exposure (RDE), Industrial/Commercial Direct Exposure (IDE), and Leachability Based on Groundwater and Surface Water Criteria.

The sediment concentrations were also compared to consensus-based Threshold Effect Concentrations (TEC) and Probable Effect Concentrations (PEC) as described in Table 7 of Development and Evaluation of Consensus-Based Sediment Quality Assessment Guidelines (SQAGs) for Freshwater-Ecosystems,

published by MacDonald Environmental Sciences, Ltd. for the Florida Department of Environmental Protection (FDEP) in 2003.

The sediment analytical results are summarized in Table 1. The sediment analytical results were presented in Figures 2 through 6. A copy of the sediment analytical laboratory reports and Chain-of-Custody (COC) records are included in Appendix B.

4.1.1 Total Recoverable Petroleum Hydrocarbons (TRPH)

TRPHs were not detected above the SCTLs in any of the sediment samples.

4.1.2 Organochlorine Pesticides (OCPs)

4,4-DDE:

- S37A: 4,4-dichlorodiphenyldichloroethylene (4,4-DDE) exceeded the SQAG TEC of 3.2 micrograms/kilogram (µg/kg) in S37A-SD-2 at 4.49 µg/kg. This value does not exceed the SCTLs.

The 4,4-DDE concentrations in the remaining sediment samples were reported below SCTLs and SQAGs.

Remaining OCPs Analyzed:
Concentrations for all other OCP analytes were reported below SCTLs and SQAGs in all the sediment samples collected.

4.1.3 8 RCRA Metals

Arsenic:
Two (2) sediment samples exhibited arsenic concentrations above the SQAG TEC of 9.8 mg/kg as well as the RDE SCTL of 2.1 mg/kg; however, these values do not exceed IDE SCTL of 12mg/kg:

- S37A: S37A-SD2 (10 mg/kg)
- S13: S13-SD1 (11 mg/kg)

Two (2) sediment samples exhibited arsenic concentrations above only the RDE SCTL of 2.1 mg/kg, and do not exceed the SQAGs or the IDE SCTL:

- S36: S36-SD2 (3.8 mg/kg)
- S33: S33-SD2 (2.3 mg/kg)

The arsenic concentrations in the remaining sediment samples were reported below SCTLs and SQAGs.

Barium:

- S37A: Barium exceeded the SQAG TEC of 20 mg/kg in S37A-SD-2 at 28 mg/kg. This value does not exceed the RDE SCTL of 120 mg/kg.

The barium concentrations in the remaining sediment samples were reported below SCTLs and SQAGs.

Chromium:
Five (5) sediment samples exhibited chromium concentrations above the Surface Water Leachability Criteria of 4.2 mg/kg:

- G57: G57-SD1 (6 mg/kg)

- S37A: S37A-SD-1 (4.6 mg/kg)
- S36: S36-SD1 (4.7 mg/kg) and S36-SD2 (6.2 mg/kg)
- S33: S33-SD1 (6.5 mg/kg).

These values do not exceed the SQAGs. The chromium concentrations in the remaining sediment samples were reported below SCTLs and SQAGs.

Selenium:

- S37A: Selenium exceeded the Surface Water Leachability Criteria of 0.5 mg/kg in S37A-SD-2 at 1.3 mg/kg. This value does not exceed the SQAGs.

The selenium concentrations in the remaining sediment samples were reported below SCTLs and SQAGs.

Remaining Metals Analyzed:
Concentrations of lead, cadmium, silver, and mercury were reported below SCTLs and SQAGs in all of the sediment samples collected.

4.2 Soil Analytical Results

Soil concentrations were compared to the SCTLs per Chapter 62-777, FAC. The SCTLs include RDE, IDE, and Leachability Based on Groundwater Criteria and Surface Water Criteria.

Soil analytical results are summarized in Table 2. Figures illustrating the soil analytical results are included in Figures 2 through 6. A copy of the soil analytical laboratory reports and COC records are included in Appendix B.

4.2.1 Total Recoverable Petroleum Hydrocarbons (TRPH)

TRPHs were not detected above the SCTLs in any of the soil samples.

4.2.2 Organochlorine Pesticides (OCPs)

OCP analytes were not detected above the SCTLs in any of the soil samples.

4.2.3 8 RCRA Metals

Arsenic:
Three (3) soil samples exhibited arsenic concentrations above the RDE SCTL of 2.1 mg/kg but below the IDE SCTL of 12 mg/kg:

- S13: S13 SS-1 (5.2 mg/kg), S13 SS-2 (4.2 mg/kg), and S13 SS-4A+4B (2.7 mg/kg)

The arsenic concentrations in the remaining soil samples were reported below SCTLs.

Chromium:
Eleven (11) soil samples exhibited chromium concentrations above the Surface Water Leachability Criteria of 4.2 mg/kg, but below the RDE SCTL of 210 mg/kg and the IDE SCTL of 240 mg/kg:

- G57: G57 SS-2A+2B (6.8 mg/kg)
- S37A: S37A SS-2 (8.9 mg/kg) and S37A SS-4 (4.3 mg/kg)

- S36: S36 SS-1A+2B (5.4 mg/kg) and S36 SS-3A+3B (4.6 mg/kg)
- S33: S33 SS-2A+2B (6.5 mg/kg) and S33 SS-3 (8.5 mg/kg)
- S13: S33 SS-1 (7.4 mg/kg), S33 SS-2 (7.1 mg/kg), S33 SS-3 (6.3 mg/kg), and S33 SS-4 (6.6 mg/kg)

The chromium concentrations in the remaining soil samples were reported below SCTLs.

Silver:
Two (2) soil samples exhibited silver concentrations above the Surface Water Leachability Criteria of 0.01 mg/kg, but below the RDE SCTL of 410 mg/kg and the IDE SCTL of 8,200 mg/kg:

- S37A: S37A SS-4 Split (0.088 mg/kg)
- S33: S33 SS-1A+2B (0.51 mg/kg)

The silver concentrations in the remaining soil samples were reported below SCTLs.

5.0 SUMMARY AND CONCLUSIONS

AECOM has completed the sediment and soil sampling from within the Broward County spillway sites S33, S36, S37A, G57, and pump station S13, located throughout the eastern region of Broward County, Florida. Provided below is AECOM's summary.

- Two (2) sediment samples were collected from each of the four (4) spillway sites and pump station, resulting in a total of eight (10) sediment samples

- A total of 19 soil samples were collected from the spillway sites and pump station, plus one (1) split sample. Of the 19 samples, 10 were composites, each representing two (2) soil boring locations.

S13:

- Arsenic was reported above both the SQAG TEC and the RDE SCTL, but below the IDE SCTL in sediment sample, S13-SD1.
- TRPHs, OCPs, and remaining metals concentrations in the sediment samples collected from S13 were below applicable SCTLs and SQAGs.
- Arsenic was reported above the RDE SCTL but below the IDE SCTL in three (3) soil samples.
- Chromium was reported above the Surface Water Leachability Criteria but below the RDE SCTL in all four (4) soil samples.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for S13 were below applicable SCTLs

S33:

- Arsenic was reported above the RDE SCTL, but below the SQAG and IDE SCTL in sediment sample, S33-SD2.
- Chromium was reported above the Surface Water Leachability Criteria, but below the RDE SCTL in sediment sample, S33-SD1.
- TRPHs, OCPs, and remaining metals concentrations in the sediment samples collected from S33 were below applicable SCTLs and SQAGs.

- Chromium was reported above the Surface Water Leachability Criteria but below the RDE SCTL in two (2) soil samples.
- Silver was reported above the Surface Water Leachability Criteria but below the RDE SCTL in one (1) soil sample.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for S33 were below applicable SCTLs

S36:

- Arsenic was reported above the RDE SCTL, but below the IDE SCTL in sediment sample, S36-SD2.
- Chromium was reported above the Surface Water Leachability Criteria, but below the RDE SCTL in both sediment samples.
- TRPHs, OCPs, and remaining metals concentrations in the sediment samples collected from S36 were below applicable SCTLs and SQAGs.
- Chromium was reported above the Surface Water Leachability Criteria but below the RDE SCTL in two (2) soil samples.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for S36 were below applicable SCTLs

S37A:

- Arsenic was reported above both the SQAG TEC and the RDE SCTL in sediment sample, S37A-SD2.
- 4,4-DDE and barium were reported above the SQAG TECs, but below the RDE SCTLs in sediment sample, S37A-SD2.
- Chromium and selenium were detected in sediment samples above the Surface Water Leachability Criteria at one location each, but below the SQAG standards
- TRPHs, remaining OCPs, and remaining metals concentrations in the sediment samples collected from S37A were below applicable SCTLs and SQAGs.
- Chromium was reported above the Surface Water Leachability Criteria but below the RDE SCTL in two (2) soil samples.
- Silver was reported above the Surface Water Leachability Criteria but below the RDE SCTL in one (1) split soil sample.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for S37A were below applicable SCTLs

G57:

- Chromium was reported above the Surface Water Leachability Criteria but below the SQAG standards in sediment sample, G57-SD1.
- TRPHs, remaining OCPs, and remaining metals concentrations in the sediment samples collected from G57 were below applicable SCTLs and SQAGs.
- Chromium was reported above the Surface Water Leachability Criteria but below the RDE SCTL in one (1) soil sample.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for S37A were below applicable SCTLs

6.0 RECOMMENDATIONS

The site-specific recommendations are summarized below:

6.1 Sediment Analytical Results

G57
The sediment analytical results indicated concentration of contaminants below the respective SQAG and RDE for site G57. Hence, no unacceptable risk to workers or special management of the sediments is required for this one (1) site.

S-13, S33, S36 and S37A
The concentration of contaminants in sediments were reported above the applicable SQAGs/RDE but below IDE at S-13, S33, S36 and S37A. It is AECOM's opinion that the concentrations of contaminants in the sediments at these sites, exceeding the Residential SCTL, do not pose an unacceptable risk to workers during the proposed construction activities. Discussions with the District indicate that the sediments will be used for constructing surface features and/or stockpiled on the District property. These sediments can be reused for the District's proposed use without restrictions (for non-residential use only). However, if the excavated sediments are to be used in project settings with the possibility of being inundated with water, then additional risk assessment and/or testing may be required. Additional testing is warranted prior to any off-site use or disposal.

Additionally, the construction companies contracted for the Broward Basin projects should develop a Sediment Management Plan and a Site-specific Health and Safety Plan and notify the workers of the presence of contaminants in the sediment.

6.2 Soil Analytical Results

The concentration of chromium in soils were reported above the Surface Water Leachability Criteria but below RDE at S-13, S33, S36 S37A, and G57. Additionally, concentration of arsenic in soil was reported above the RDE but below IDE at S-13. It is AECOM's opinion that the concentrations of arsenic, exceeding the Residential SCTL, do not pose an unacceptable risk to workers during the proposed construction activities. Discussions with the District indicate that the soils will be used for constructing surface features and/or stockpiled on the District property. However, if the soils are to be used in project settings with the possibility of being inundated with water, then additional risk assessment and/or testing may be required. Additional testing is warranted prior to any off-site use or disposal. Additionally, the construction companies contracted for the Broward Basin projects should develop a Soil Management Plan and a Site-specific Health and Safety Plan and notify the workers of the presence of arsenic in the soil.

Notes:
Exceeds the SQAG-TEC
Exceeds SCTL Direct Exposure - Residential
Exceeds Surface Water Leachability Criteria
TEC - Threshold Effective Concentration
PEC - Probabable Effective Concentration
SCTL - Soil Cleanup Target Level
µg/kg - micrograms per kilogram
mg/kg - milligrams per kilogram
[1] SQAG - Sediment Quality Assessment Guidelines per Table 7 MacDonald et al. 2003
[2] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Direct Exposure - Residential
[3] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Direct Exposure - Commercial
[4] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Leachability Based on Groundwater Criteria
[5] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Leachability Based on Surface Water Criteria
[A] - U. S. Fish and Wildlife Service Interim Value
* - Leachability value may be derived using SPLP Test to calculate site-specific SCTLs or may be deternied using TCLP in the event oily wastes are present
U - Indicates that the compound was analyzed for but not detected above the listed value
I - The reported value is between the laboratory method detection limits (MDL) and the laboratory practical quantitation limit
NA - Not Available (as of 4/17/2005)
TRPH - Total Residual Petroleum Hydrocarbons
UCL - Upper Confidence Level

RE: LOG# 2593948
Project ID: SFWMD Spillway

Dear Devansh Shah:

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, January 21, 2025. Results reported herein conform to the most current NELAC standards, where applicable, unless indicated by * in the body of the report. The enclosed Chain of Custody is a component of this package and should be retained with the package and incorporated therein.

Results for all solid matrices are reported in dry weight unless otherwise noted. Results for all liquid matrices are reported as received in the laboratory unless otherwise noted. Results relate only to the samples received. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

Samples are disposed of after 30 days of their receipt by the laboratory unless extended storage is requested in writing. The laboratory maintains the right to charge storage fees for archived samples. This report will be archived for 5 years after which time it will be destroyed without further notice, unless prior arrangements have been made.

Certain analyses are subcontracted to outside NELAC certified laboratories, please see the Project Summary section of this report for NELAC certification numbers of laboratories used. A Statement of Qualifiers is available upon request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

N Laing

ANALYTICAL RESULTS QUALIFIERS

Workorder: 2593948

Project ID: SFWMD Spillway

PARAMETER QUALIFIERS

J2	Surrogate recovery was outside defined limits due to matrix interference.

PROJECT COMMENTS

2593948	A reported value of U indicates that the compound was analyzed for but not detected above the MDL. A value flagged with an "i" flag indicates that the reported value is between the laboratory method detection limit and the practical quantitation limit.

RE: LOG# 2594012
Project ID: SFWMD Phase II

Dear Babu Madabushi:

Enclosed are the analytical results for sample(s) received by the laboratory on Saturday, January 25, 2025. Results reported herein conform to the most current NELAC standards, where applicable, unless indicated by * in the body of the report. The enclosed Chain of Custody is a component of this package and should be retained with the package and incorporated therein.

Results for all solid matrices are reported in dry weight unless otherwise noted. Results for all liquid matrices are reported as received in the laboratory unless otherwise noted. Results relate only to the samples received. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

Samples are disposed of after 30 days of their receipt by the laboratory unless extended storage is requested in writing. The laboratory maintains the right to charge storage fees for archived samples. This report will be archived for 5 years after which time it will be destroyed without further notice, unless prior arrangements have been made.

Certain analyses are subcontracted to outside NELAC certified laboratories, please see the Project Summary section of this report for NELAC certification numbers of laboratories used. A Statement of Qualifiers is available upon request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

N Laing

ANALYTICAL RESULTS QUALIFIERS

Workorder: 2594012

Project ID: SFWMD Phase II

PARAMETER QUALIFIERS

J2	Surrogate recovery was outside defined limits due to matrix interference.
J4	MS/MSD recovery exceeded control limits due to matrix interference. LCS/LCSD recovery was within acceptable range.

PROJECT COMMENTS

2594012	A reported value of U indicates that the compound was analyzed for but not detected above the MDL. A value flagged with an "i" flag indicates that the reported value is between the laboratory method detection limit and the practical quantitation limit.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Job ID: 185-2658-1
Project/Site: SFWMD Phase II

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 185-2658-1 — Eurofins Southeast Fort Lauderdale

Job Narrative
185-2658-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The sample was received on 1/24/2025 3:35 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C.

Receipt Exceptions
Sample ID updated per client request. S37A-SS-4 (185-2658-1)

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

RE: LOG# 2595153
Project ID: SFWMD Broward

Dear Babu Madabushi:

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, April 15, 2025. Results reported herein conform to the most current NELAC standards, where applicable, unless indicated by * in the body of the report. The enclosed Chain of Custody is a component of this package and should be retained with the package and incorporated therein.

Results for all solid matrices are reported in dry weight unless otherwise noted. Results for all liquid matrices are reported as received in the laboratory unless otherwise noted. Results relate only to the samples received. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

Samples are disposed of after 30 days of their receipt by the laboratory unless extended storage is requested in writing. The laboratory maintains the right to charge storage fees for archived samples. This report will be archived for 5 years after which time it will be destroyed without further notice, unless prior arrangements have been made.

Certain analyses are subcontracted to outside NELAC certified laboratories, please see the Project Summary section of this report for NELAC certification numbers of laboratories used. A Statement of Qualifiers is available upon request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brianna Davis

ANALYTICAL RESULTS QUALIFIERS

Workorder: 2595153

Project ID: SFWMD Broward

PARAMETER QUALIFIERS

J2	Surrogate recovery was outside defined limits due to matrix interference.

PROJECT COMMENTS

2595153	A reported value of U indicates that the compound was analyzed for but not detected above the MDL. A value flagged with an "i" flag indicates that the reported value is between the laboratory method detection limit and the practical quantitation limit.

SAMPLE COMMENTS

2595153001	D1|Sample diluted due to physical matrix interference that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution.

RE: LOG# 2595113
Project ID: SFWMD Broward

Dear Babu Madabushi:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, April 11, 2025. Results reported herein conform to the most current NELAC standards, where applicable, unless indicated by * in the body of the report. The enclosed Chain of Custody is a component of this package and should be retained with the package and incorporated therein.

Results for all solid matrices are reported in dry weight unless otherwise noted. Results for all liquid matrices are reported as received in the laboratory unless otherwise noted. Results relate only to the samples received. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

Samples are disposed of after 30 days of their receipt by the laboratory unless extended storage is requested in writing. The laboratory maintains the right to charge storage fees for archived samples. This report will be archived for 5 years after which time it will be destroyed without further notice, unless prior arrangements have been made.

Certain analyses are subcontracted to outside NELAC certified laboratories, please see the Project Summary section of this report for NELAC certification numbers of laboratories used. A Statement of Qualifiers is available upon request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

N Laing

ANALYTICAL RESULTS QUALIFIERS

Workorder: 2595113

Project ID: SFWMD Broward

PARAMETER QUALIFIERS

J1	Surrogate recovery was outside defined limits.
J2	Surrogate recovery was outside defined limits due to matrix interference.
P1	RPD value not applicable for sample concentrations less than 5 times the PQL.

PROJECT COMMENTS

2595113	A reported value of U indicates that the compound was analyzed for but not detected above the MDL. A value flagged with an "i" flag indicates that the reported value is between the laboratory method detection limit and the practical quantitation limit.

South Florida Water Management District Phase II ESA Report - G54, G56, S37B

AECOM

August 22, 2025

Mr. Terry Horan, P.E.
Real Estate Division
South Florida Water Management District
3301 Gun Club Road
West Palm Beach, Florida 33406

RE: Limited Phase II ESA Report
Broward County Spillways – G56, S37B, and G54
Broward County, Florida
Contract # 4600004507 / Work Order # 14
AECOM Job #: 60741079

Dear Mr. Horan:

AECOM Technical Services Inc. (AECOM) is pleased to submit this Limited Phase II Environmental Site Assessment (ESA) Report that includes the assessment of the sediment and soil at three (3) Broward County spillway sites located throughout the eastern region of Broward County, Florida. This report was prepared in accordance with Work Order No. 14 authorized by the South Florida Water Management District (District).

AECOM appreciates the opportunity to support the District on this important project. If you have any questions regarding the information in this report or this project, please contact AECOM at your convenience.

Respectfully Submitted,

AECOM TECHNICAL SERVICES, INC.

Babu Madabhushi
Project Manager

Kelsey Esteves, P.G.
Project Geologist

Limited Phase II ESA Report
Broward County Spillways – G56, S37B, and G54
Broward County, Florida
Contract # 4600004507 / Work Order # 14

1.0 INTRODUCTION

AECOM Technical Services, Inc. (AECOM) is pleased to present to the South Florida Water Management District (District) this Limited Phase II Environmental Site Assessment (ESA) Report that includes the assessment of the sediment and soil at three (3) Broward County spillway sites located throughout the eastern region of Broward County, Florida. A general site vicinity map is included as Figure 1.

The purpose of this assessment is to characterize the sediment in the vicinity of each spillway and screen soils along their respective canal banks and evaluate whether the materials are considered contaminated per Chapter 62-777 of the Florida Administrative Code (FAC). The materials were also evaluated for ecological risk based on Sediment Assessment Guidelines.

This project was conducted in accordance with Work Order No. 14 dated October 30, 2024, under AECOM's contract number 4600004507.

2.0 OBJECTIVE

The objective is to characterize the sediment and soil in the vicinity of spillway sites G56, S37B, and G54 for organochlorine pesticides, petroleum hydrocarbons, and 8 Resource Conservation and Recovery Act (RCRA) metals to evaluate if the materials are considered contaminated in accordance with Chapter 62-777 of the FAC.

3.0 FIELD SAMPLING METHODOLOGY

The following sections provide details of the general field and laboratory methodology used for the sediment and soil sampling and analysis.

All sample locations were recorded with a handheld Global Positioning System (GPS) receiver utilizing units of latitude and longitude in North American Datum (NAD) 83. These sediment and soil sample locations were illustrated on Figures 2 through 4 for Sites G56, S37B, and G54, respectively. The GPS coordinates of sediment and soil locations are provided in Table 1 and Table 2, respectively.

3.1 Sediments

3.1.1. Depth to Sediment Evaluation

All depth to sediment readings were recorded approximately in the central portion of the spillway canals. Prior to the sediment sample collection, approximate depth to sediment was recorded at each location using a graduated pole with extensions. The depth to sediment was gauged when the bottom of the pole

encountered the top of the sediment. Sediment samples (for laboratory analysis) were collected at the same locations.

Sediment was encountered at depths ranging from 5.8 feet to 16.8 feet below the water surface. The sediments collected in the project areas consisted of a light gray to dark gray, fine-grained silty sands with shell and rock fragments.

The depths to sediment, average depths to sediment at each site, and lithologic descriptions are provided in Table 1. Copies of the sediment sample logs are provided in Appendix A.

3.1.2. Sampling Procedure

On June 17, 2025, utilizing a Jon boat, two (2) sediment samples were collected from each of the three (3) spillway sites per the approved sampling plan, resulting in a total of six (6) sediment samples. Prior to the sample collection at each location, the boat was anchored.

After the depth to sediment was recorded, sediment sample was collected from the upper foot of sediment, using a stainless-steel hand auger and transferred into a stainless-steel mixing bowl. At each sediment sample point, a pre-cleaned stainless-steel hand auger with extensions, stainless-steel bowl, and stainless-steel spoon were used for sample collection and homogenization.

Immediately following collection and homogenization, samples were transferred to laboratory-supplied jars. The sample jars were labeled with the sample identification, sample date and time. Each sample was then preserved on ice in a cooler to be shipped to the laboratory for analysis.

Sampling equipment was decontaminated between each sample location. Decontamination included washing sampling equipment with Alconox, rinsing with deionized water, spraying with alcohol, and a final rinsing with deionized water.

3.2 Soil Sampling

On June 19 and 20, 2025, a total of 12 soil samples were collected from the spillway sites. Of the 12 samples, seven (7) were composites, each representing two (2) soil boring locations. The total number of soil boring locations was 19. The following summarizes the sample collection details for each site:

- G56: 4 composite samples (8 boring locations total)
- S37B: 2 composite samples (4 boring locations) and 2 discrete samples (6 boring locations total)
- G54: 1 composite sample (2 boring locations) and 3 discrete samples (5 boring locations total)

Soil samples were collected using stainless-steel hand auger to the observed depth-to-water (DTW). The soil borings were advanced to two (2) feet below land surface (bls). soil lithology was recorded in soil boring logs, which are included in Appendix A.

At each soil boring location, a pre-cleaned stainless-steel hand auger, stainless-steel bowl, and stainless-steel spoon were used for sample collection and homogenization. For composite samples, soil collected from each of the two borings was thoroughly mixed in a stainless-steel bowl using a stainless-steel spoon.

Immediately following collection and homogenization, samples were transferred to laboratory-supplied jars. The sample jars were labeled with the sample identification, sample date and time. Each sample was then preserved on ice in a cooler.

Sampling equipment was decontaminated between each sample location. Decontamination included washing sampling equipment with Alconox, rinsing with deionized water, spraying with alcohol, and a final rinsing with deionized water.

3.3 Sediment and Soil Analysis

Samples were submitted to Jupiter Environmental Laboratories, Inc. (JEL), a State and District approved laboratory located in Jupiter, Florida. Samples were submitted following chain-of-custody (COC) procedures.

Based on correspondence with the District and an approved sampling plan, the sediments and soils were evaluated for the following:

- Organochlorine Pesticides (OCPs) by Environmental Protection Agency (EPA) Method 8081
- Total Recoverable Petroleum Hydrocarbons (TRPH) by FL-PRO Method
- 8 RCRA Metals (arsenic, barium, cadmium, chromium, lead, selenium, and silver) by EPA Method 6010B, and mercury by EPA Method 7471A

4.0 RESULTS

The sediment and soil samples were collected from within the Broward County spillway sites G56, S37B, and G54. The analytical results obtained from this sampling event are presented in the following sections.

4.1 Sediment Analytical Results

Sediment concentrations were compared to the Soil Cleanup Target Levels (SCTLs) as provided in Chapter 62-777, FAC. The SCTLs include Residential Direct Exposure (Residential), Industrial/Commercial Direct Exposure (Commercial), and Leachability Based on Groundwater and Surface Water Criteria.

The sediment concentrations were also compared to consensus-based Threshold Effect Concentrations (TEC) and Probable Effect Concentrations (PEC) as described in Table 7 of Development and Evaluation of Consensus-Based Sediment Quality Assessment Guidelines (SQAGs) for Freshwater-Ecosystems, published by MacDonald Environmental Sciences, Ltd. for the Florida Department of Environmental Protection (FDEP) in 2003.

The sediment analytical results are summarized in Table 1. The sediment analytical results were presented in Figures 2 through 4. A copy of the sediment analytical laboratory reports and Chain-of-Custody (COC) records are included in Appendix B.

4.1.1 Total Recoverable Petroleum Hydrocarbons (TRPH)

TRPHs were not detected above the SCTLs in any of the sediment samples.

4.1.2 Organochlorine Pesticides (OCPs)

Concentrations for the OCP analytes were reported below SCTLs and SQAGs in all the sediment samples collected.

4.1.3 8 RCRA Metals

Barium:
One (1) sediment sample exhibited a barium concentration above the SQAG TEC of 20 mg/kg but below the Residential SCTL of 120 mg/kg:

- S37B: S37B-SD-1 (21 mg/kg)

The barium concentrations in the remaining sediment samples were reported below SCTLs and SQAGs.

Chromium:
Two (2) sediment samples exhibited chromium concentrations above the Surface Water Leachability Criteria of 4.2 mg/kg:

- S37B: S37B-SD-1 (4.9 mg/kg)
- G54: G54-SD-2 (5.8 mg/kg)

These values do not exceed the SQAGs or SCTLs. The chromium concentrations in the remaining sediment samples were reported below SCTLs and SQAGs.

Remaining Metals Analyzed:
Concentrations of arsenic, cadmium, chromium, lead, mercury, selenium, and silver were reported below SCTLs and SQAGs in all of the sediment samples collected.

4.2 Soil Analytical Results

Soil concentrations were compared to the SCTLs per Chapter 62-777, FAC. The SCTLs include Residential, Commercial, Leachability Based on Groundwater and Surface Water Criteria .

Soil analytical results are summarized in Table 2. Figures illustrating the soil analytical results are included in Figures 2 through 6. A copy of the soil analytical laboratory reports and COC records are included in Appendix B.

4.2.1 Total Recoverable Petroleum Hydrocarbons (TRPH)

TRPHs were not detected above the SCTLs in any of the soil samples.

4.2.2 Organochlorine Pesticides (OCPs)

Concentrations for the OCP analytes were reported below SCTLs in all the soil samples collected.

4.2.3 8 RCRA Metals

Arsenic:
Two (2) soil samples exhibited arsenic concentrations above the Residential SCTL of 2.1 mg/kg but below the Commercial SCTL of 12 mg/kg:

- G56: G56 SS-1 Comp (2.4 mg/kg)
- G54: G54 SS-4 (2.3 mg/kg)

The arsenic concentrations in the remaining soil samples were reported below SCTLs.

Chromium:
Seven (7) soil samples exhibited chromium concentrations above the Surface Water Leachability Criteria of 4.2 mg/kg but below the Residential SCTL of 210 mg/kg:

- G56: G56 SS-1 Comp (4.5 mg/kg) and G56 SS-3 Comp (4.8 mg/kg)
- S37B: S37B SS-2 Comp (4.6 mg/kg) and S37B SS-4 Comp (5.4 mg/kg)
- G54: G54 SS-2 Comp (4.8 mg/kg), G54 SS-3 Comp (4.7 mg/kg), and G54 SS-4 Comp (5.1 mg/kg)

The chromium concentrations in the remaining soil samples were reported below SCTLs.

Selenium:
One (1) soil sample exhibited a selenium concentration above the Surface Water Leachability Criteria of 0.5 mg/kg but below the Residential SCTL of 440 mg/kg:

- G54: G54 SS-4 Comp (0.77 mg/kg)

The selenium concentrations in the remaining soil samples were reported below SCTLs.

Remaining Metals Analyzed:
Concentrations of barium, cadmium, chromium, lead, mercury, selenium, and silver were reported below SCTLs in all of the soil samples collected.

5.0 SUMMARY AND CONCLUSIONS

AECOM has completed the sediment and soil sampling from within the Broward County spillway sites G56, S37B, and G54, located throughout the eastern region of Broward County, Florida. Provided below is AECOM's summary.

- Two (2) sediment samples were collected from each of the three (3) spillway sites, resulting in a total of six (6) sediment samples

- A total of 12 soil samples were collected from the spillway sites. Of the 12 samples, 7 were composites, each representing two (2) soil boring locations.

G56:

- TRPHs, OCPs, and metals concentrations in the sediment samples collected for G56 were below applicable SCTLs and SQAGs.
- Arsenic was above the Residential SCTL but below the Commercial SCTL in one (1) soil sample at G56.
- Chromium was reported above the Surface Water Leachability Criteria but below the Residential SCTL in two (2) soil samples at G56.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for G56 were below applicable SCTLs.

S37B:

- Barium was reported above the SQAG TECs, but below the Residential SCTL in one (1) sediment sample at S37B.
- Chromium was reported above the Surface Water Leachability Criteria, but below the Residential SCTL and SQAGs in one (1) sediment sample at S37B.
- TRPHs, OCPs, and remaining metals concentrations in the sediment samples collected from S37B were below applicable SCTLs and SQAGs.
- Chromium was reported above the Surface Water Leachability Criteria but below the Residential SCTL in two (2) soil samples at S37B.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for S37B were below applicable SCTLs.

G54:

- Chromium was reported above the Surface Water Leachability Criteria, but below the Residential SCTL and SQAGs in one (1) sediment sample at G54.
- TRPHs, OCPs, and remaining metals concentrations in the sediment samples collected for G54 were below applicable SCTLs and SQAGs.
- Arsenic was above the Residential SCTL but below the Commercial SCTL in one (1) soil sample in the soil sample at G54.
- Chromium was reported above the Surface Water Leachability Criteria but below the Residential SCTL in three (3) soil samples at G54.
- Selenium was reported above the Surface Water Leachability Criteria but below the Residential SCTL in one (1) soil sample at G54.
- TRPHs, OCPs, and remaining metals concentrations in the soil samples collected for G54 were below applicable SCTLs.

6.0 RECOMMENDATIONS

The site-specific recommendations are summarized below:

6.1 Sediment Analytical Results

G56

The sediment analytical results indicated concentration of contaminants below the respective SQAGs and Residential SCTLs for sites G56. Hence, no unacceptable risk to workers or special management of the sediments is required for these spillway sites.

S37B and G54

The concentration of barium in the sediment sample collected from S37B-SD-1 was reported above the applicable SQAG TECs but below the Residential SCTL. The concentration of chromium in sediment were reported above the Surface Water Leachability Criteria but below RDE at S37B and G55. It is AECOM's opinion that the concentration of the contaminant in the sediments at this site does not pose an unacceptable risk to workers during the proposed construction activities. Discussions with the District indicate that the sediments will be used for constructing surface features and/or stockpiled on the District property. These sediments can be reused for the District's proposed use without restrictions (for non-

residential use only). However, if the excavated sediments are to be used in project settings with the possibility of being inundated with water, then additional risk assessment and/or testing may be required. Additional testing is warranted prior to any off-site use or disposal and the material must be disposed at a licensed waste treatment facility, if required. Additionally, the construction companies contracted for the Broward Basin projects should develop a Sediment Management Plan and a Site-specific Health and Safety Plan and notify the workers of the presence of contaminants in the sediment.

6.2 Soil Analytical Results

G56, S37B, and G54

Arsenic in soil was reported above the Residential SCTL but below Commercial SCTL at the G56 and G54 Spillway sites. It is AECOM's opinion that the concentrations of arsenic, exceeding the Residential SCTL, do not pose an unacceptable risk to workers during the proposed construction activities. Additionally, the concentration of chromium in soils were reported above the Surface Water Leachability Criteria but below RDE at G56, S37B, and G54. Discussions with the District indicate that the soil will be used for constructing surface features and/or stockpiled on the District property. These soils can be reused for the District's proposed use without restrictions (for non-residential use only). However, if the excavated soils are to be used in project settings with the possibility of being inundated with water, then additional risk assessment and/or testing may be required. Additional testing is warranted prior to any off-site use or disposal and the material must be disposed at a licensed waste treatment facility, if required. Additionally, the construction companies contracted for the Broward Basin projects should develop a Soil Management Plan and a Site-specific Health and Safety Plan and notify the workers of the presence of arsenic in the soil.

Notes:
Exceeds SCTL Direct Exposure - Residential
Exceeds Surface Water Leachability Criteria
SCTL - Soil Cleanup Target Level
µg/kg - micrograms per kilogram
mg/kg - milligrams per kilogram
[2] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Direct Exposure - Residential
[3] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Direct Exposure - Commercial
[4] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Leachability Based on Groundwater Criteria
[5] Soil Cleanup Target Levels (SCTLs) per Chapter 62-777 FAC Table II, Leachability Based on Surface Water Criteria
[A] - U. S. Fish and Wildlife Service Interim Value
* - Leachability value may be derived using SPLP Test to calculate site-specific SCTLs or may be deternied using TCLP in the event oily wastes are present
U - Indicates that the compound was analyzed for but not detected above the listed value
I - The reported value is between the laboratory method detection limits (MDL) and the laboratory practical quantitation limit (PQL).
NA - Not Available (as of 4/17/2005)
TRPH - Total Recoverable Petroleum Hydrocarbons

APPENDIX A

Sediment and Soil Boring Logs

Florida Department of Environmental Protection - Division of Waste Management - Bureau of Petroleum Storage Systems

RE: LOG# 2595941
Project ID: SFWMD Broward 60741079

Dear Babu Madabushi:

Enclosed are the analytical results for sample(s) received by the laboratory on Wednesday, June 18, 2025. Results reported herein conform to the most current NELAC standards, where applicable, unless indicated by * in the body of the report. The enclosed Chain of Custody is a component of this package and should be retained with the package and incorporated therein.

Results for all solid matrices are reported in dry weight unless otherwise noted. Results for all liquid matrices are reported as received in the laboratory unless otherwise noted. Results relate only to the samples received. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

Samples are disposed of after 30 days of their receipt by the laboratory unless extended storage is requested in writing. The laboratory maintains the right to charge storage fees for archived samples. This report will be archived for 5 years after which time it will be destroyed without further notice, unless prior arrangements have been made.

Certain analyses are subcontracted to outside NELAC certified laboratories, please see the Project Summary section of this report for NELAC certification numbers of laboratories used. A Statement of Qualifiers is available upon request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Genesis De Sousa

ANALYTICAL RESULTS QUALIFIERS

Workorder: 2595941

Project ID: SFWMD Broward 60741079

PARAMETER QUALIFIERS

J2	Surrogate recovery was outside defined limits due to matrix interference.
P	Results vary by more than allowed by precision requirement for method.

PROJECT COMMENTS

2595941	A reported value of U indicates that the compound was analyzed for but not detected above the MDL. A value flagged with an "i" flag indicates that the reported value is between the laboratory method detection limit and the practical quantitation limit.

RE: LOG# 2595974
Project ID: SFWMD Broward 60741079

Dear Babu Madabushi:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, June 20, 2025. Results reported herein conform to the most current NELAC standards, where applicable, unless indicated by * in the body of the report. The enclosed Chain of Custody is a component of this package and should be retained with the package and incorporated therein.

Results for all solid matrices are reported in dry weight unless otherwise noted. Results for all liquid matrices are reported as received in the laboratory unless otherwise noted. Results relate only to the samples received. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

Samples are disposed of after 30 days of their receipt by the laboratory unless extended storage is requested in writing. The laboratory maintains the right to charge storage fees for archived samples. This report will be archived for 5 years after which time it will be destroyed without further notice, unless prior arrangements have been made.

Certain analyses are subcontracted to outside NELAC certified laboratories, please see the Project Summary section of this report for NELAC certification numbers of laboratories used. A Statement of Qualifiers is available upon request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Genesis De Sousa

ANALYTICAL RESULTS QUALIFIERS

Workorder: 2595974

Project ID: SFWMD Broward 60741079

PARAMETER QUALIFIERS

J2	Surrogate recovery was outside defined limits due to matrix interference.

PROJECT COMMENTS

2595974	A reported value of U indicates that the compound was analyzed for but not detected above the MDL. A value flagged with an "i" flag indicates that the reported value is between the laboratory method detection limit and the practical quantitation limit.

SAMPLE COMMENTS

2595974010	D1|Sample diluted due to physical matrix interference that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution.
2595974011	D1|Sample diluted due to physical matrix interference that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution.

Sample Receiving

From: Shah, Devansh <devansh.shah@aecom.com>
Sent: Monday, June 23, 2025 11:11 AM
To: Sample Receiving
Cc: Esteves, Kelsey; Madabhushi, Babu; Client Services
Subject: RE: Inquiry on COC for project name 'SFWMD Broward / 60741079'

Hi,

The 2 chains received on last Friday need to be logged in together.

The samples picked up on last Wednesday will be a separate chain. Also, the Wednesday samples are sediment samples and the EDD needs to be formatted accordingly.

Thanks,

Devansh Shah, P.E.

Subject: Inquiry on COC for project name 'SFWMD Broward / 60741079'

Good Morning,

We have received your samples for project name 'SFWMD Broward / 60741079'. We received 2 COCs with the same project name and wanted you to verify if these chains are to be logged in together under one report. We have attached a copy of the COCs for your reference.

We look forward to hearing from you.

Best Regards,

Sample Custodian | Sample Receiving | www.jupiterlabs.com | 561-575-0030 (ext. 3015)
